Each RADAR unit has an audio feature which has pitched sound in response to speed. The higher the speed the higher the pitch. This is a continuous signal, and is required to be active. It's intersting to listen to a RADAR as traffic apporaches and "slows" at the sight of the patrol car.   You can "hear" the deceleration. Certain speeds have distinct pitches, and seasoned officers can tell you within just a few mph, what the speed is based on that sound.

Finally, the officer looks down, or over and verifies the speed displayed to his earlier guess. These two speeds should be very close.

In the case of moving RADAR, the officer must also verify the speed of the patrol vehicle. This speed should be within 1 mph plus or minus.

When we combine effective use of target identification and add a solid tracking history, the chances of the officer making an error almost disappears.

I applaud you for ponting out the fact that it is the Training and not the RADAR that makes the difference.

Regards,

Arnie -
KT4ST

The squelch circuit on all my PC-122 based radios (122/244/640e/810e)
is very choppy. If the squelch is too high, you will hear the first
blip of whoever just keyed up. I turn down the rf gain about halfway
(or more) and then the squelch is somewhat useful in noisy conditions.

What!?! Don't go to "WallyWorld," all they have is Maxon crap...Not very dependable equipment in my opinion.

Uniden is a very good brand, and currently, I can't recommend anything else. Some would say Cobra, but in my opinion, their new radios are not very spectacular and from what I have heard, prone to problems.

Others would say Midland. I don't have any experience with Midland's newer radios, so I can't say one way or another. All I know is that the mikes in their older models were very prone to failure.

As far as purchasing online, that can certainly be done, and probably for a lot less money than something you could purchase locally. For a vast selection of links to online sites that sell radio equipment. please visit my CB Page. You will find the link below...

i don't agree with the way the rules are written but be careful of the
"technicalities" of the term "rules".
when you get a ham license or key a cb, you automatically "agree" to an
inspection.
here in fla, when you sign an application for your drivers license, you
automatically "agree" to a blood alcohol test if requested by the cop who
stopped you.
if you refuse, you automatically loose your license for 6 months and, in most
cases, your insurance company will treat you as though you were drunk anyway.
as a 15 year recovering alcoholic, i don't support driving under the influnce
but these "agreements" by cooersion really scare me like deed restrictions and
others.
if we arn't careful, anything you do will come with a hidden catch. you can
breath, IF you "agree" to do whatever.
READ THE FINE PRINT BEFORE YOU SIGN!!! know where you stand!!!
i have no gripe with the fcc wanting to inspect my equipment but my domicile is
NOT part of my equipment.
i will bring my equipment out to the front porch with an extention cord and he
can inspect it all night long should he choose.
what do i have to hide, you might ask?
nothing to hide, privacy rights to protect.
just out of principle, the constitution is like muscles. if you don't use /
protect 'em, you'll loose 'em. we've lost too many already.
jeff

> microprocessor controlled gadgets of all kinds, Fancy (but not shielded)
> TV's, that pick up MORE interference.

It always amazes me when a person comments on a particular time period with great insight, yet they wernt physically present at that given time. Well Dave, if you could actually remember the 50's, there were 4 television stations, 2 of which were the 2nd harmonic to the CB frequencies. This IS the reason why 4 watts was chosen as the maximum output of a CB.

>
> The ARRL has nothing to do with CB and has not wasted any of its time on
> CB related issues.

You are kidding right? Have you every picked up a copy of QST magazine and read its contents? One of the ARRL's membership bodies greatest interests it to publically distance themselves from CB radio. The only way they can do this is to proliferate enforcement of CB. Hell, we have Hams in my state that have already gone to our state police and volunteered to do this, just in case the Elthers Bill passes Congress. These guys thave nothing better to do with their time. There is nothing they would love more than to be a Radio Rambo with authority.

> If you knew anything about radio law, you would know
> that the ITU, has rules about HF spectrum, that has the capability of
> international communications.

Huh, the CB spectrum in Europe is different from that in the US. Such is true for Australia as well.

>But in
> the meantime, don't cry when the rest of us put you in jail, for

> breaking the rules, especially the rules that cause others less

Whos crying? Laws are words and words are interpretated differently by different people. This is the reason why we have a the Appellate and Supreme Courts, to dicern interpretations. If you knew anything about the constructs of our legal system, you'd understand this.

> Society is not doing just fine, as evidenced with the growing number of

> guilty of criminal and anti-social behavior, as long as you feel that
> you have the right to do what you want without regard for the rights of
> everyone else. *YOU* are the problem.

Sure Dave, and what have you personally done to better our society? At least I can judge for myself what is beureaucratic nonsense and what is actually a social ill. You guys would rather have our cops spending their time arresting CBers instead of Child Pornographers and Societies true low lifes. If we all listened and believed your rationale, we'd still be sipping tea every afternoon at 4 pm. Your insight is fantasyland stuff. If I have a choice of my kid playing around with his 500 watt amp or hanging on the corner getting into who knows what, guess which one Im going to choose? It seems that many people can identify a problem but they cant quantify a solution. In a perfect world no one breaks any laws.

> You are stating your *OPINION* here. It does not make it fact.

No kidding. You're just realizing this? Dont take this newsgroup stuff too seriously....I dont

>If the
> rules are found to be outdated, then they will be changed.

Sure, just like the cunnillingus and fellatio laws in my state that were written in 1789, which are still on the books. Theres one that should be enforced eh? For every 100 laws it is estimated that 7 are outdated. No-one has the time or the resources to change them because WE HAVE BIGGER PROBLEMS which must be addressed NOW.

>So far, not
> enough of the right people have been convinced. Since an ever-increasing
> number of CB (and ham) operators have demonstrated a decisive lack of
> discipline with regard to operating under the rules of their respective
> services, the FCC is not about to give them any more leeway.

>The FCC
> views the CB band as full of spoiled children, who need to be punished,
> not rewarded for their actions.

Oh, is that a fact. Im glad you are the official spokesman for the FCC. I hate to tell you this but the FCC doesnt give a rats ass about CB or CBers. The only time they get involved with them is when they HAVE to. The FCC doesnt even care about amateur radio anymore (they havent in 18 years as evidenced by the VE testing system and the abandonment of amateur enforcement until recently). There is much more immature behavior going on on the amateur bands by supposedly higher trained LICENSED INDIVIDUALS than than on the CB bands, all things considered equal.

>If CBers were disciplined and organized
> enough to support a lobby group like the ARRL, to fight for CB interests
> before the FCC, then possibly, things might change. As it is now, CBers
> are chaotic, anarchistic, and unorganized. There is no hope of
> presenting a united front.

Dave, Ive been playing around with CBs for close to 40 years now and let me tell you this; It has always been chaotic. It was chaotic in 1966 when everyone was using call signs and it is chaotic now. Nothing happened then, and nothing will happen now. Do you and your Ham friends actually believe that when the FCC can search out and fine the commercials interests tens of thousands of dollars for violations (which are also great political fodder), they are going to voluntarily waste there limited enforcement personnel on CBers? The only time the FCC will enforce CB and Amateur radio is when they absolutely have to.

PS: Dont put all of your marbles in the ARRL basket either because their mindset is that of about 1983. Why dont think they are caving in to the FCC's request to eliminate code? The FCC basically told them than unless amateur numbers increase, some bands will disappear. And in who's hands do you think those band will end up in? They'll end up where the money is.............commercial, because thats where the big fines and the big headlines are.

Well, I opted to ground the radio to the power supply, which does have a 3-prong cord. The only problem is, the only part of the power supply body that is conducting is the metal heat-sink at the back. Is it ok to jumper from this heat-sink to the radio chassis? or should I scrape off some paint on one of the panels or screws of the power supply and jumper off that?

>As I've said before: RF is RF.
>>

thank you for your neutral observations, really.
if more hams would "check their guns at the door", all of this bickering wouldn't be going on but they have to come here and play rf police and take it upon themselves to play judge and jury over this forum and try to squelch the freedom of speech and free flow of information for just talking about the subject and that's what angers me.
if they don't like what they read here, they should just ignore the post or leave the news group altogether.
yes, i know that they have a right to be here but that doesn't give them the right to spam others posts with unsolisited rules and condemnation.
if they want to "spread" the gospel according to the arrl / fcc , they should post it as a new message so everyone can ignore it equally.
have a good day.

this can be true for the truly inquisitive but most people who think that they
have a handle on things don't like to be told that they are wrong wether they
are or not even when they may discover later that they are.
this is called human pride and, in most cases, can not be "bread" out of a
person even after they get a ham licence or in any other situation.
when my uncle was alive, he was a general class and was so set in his thinking
that you couldn't convince him of his errors with the arrl handbook. he wasn't
wrong often but when he was, he wasn't.
i know not everyone is this way but it does occur all too often in all aspects
of life.
this is what makes us human. the sad part is this is what also leads to wars.
"i'm right, you're wrong - you're wrong, i'm right" syndrome.
$.02, keep the change. :)

Try the new Wilson no-ground antenna, and all of your choices are great
radios, but the Connex CX4400 is the best for a truck, easy to read display
at 70Mph, get the Connex CX4400HP
it does 50 Watts, check www.exportradios.com for the best
prices................

Yep, Most, if not all, RADARs (handheld and fixed) use beams that are
within the microwave range of frequencies. Extended exposure to this energy
can cause the development of cancerous cells. Fortunately, all offficers
(that I'm aware of) are now taught this as part of their basic RADAR
certification.

You can do it either way. If you choose to make the connectorless
splice, make sure it's physically strong enough to survive bending and
such.

In youer case the best bet would be the I-Max. The main reason for this beacuseof the groundplane radials one the Maco make it dificult to pull up into a Pine tree without doing any damage to it. The other reason would be that putting up that much metal into a pine tree is asking for a lightning strike especially in your area.
Good luck on your final choice

You know nothing about WHEN I started "playing" with radio, so your comment is baseless. Your channel information is flawed as well. How can 2 seperate TV channels both be on the 2nd harmonic of CB? What you probably meant to say was that one was on the 2nd (ch 2) and the other was on the 3rd harmonic (ch5). Also, 4 watts was not the limit chosen back then. It was 5 watts INPUT (Which translated to about 3 watts output).

Regardless of what you may think, the FCC was very deliberate when they created the CB service. There is no need for high power when the intended usage is for short range communications. The mistake that the FCC made was underestimating the effects of skip propagation even at those low levels.

Where do you come up with such fantasies? To what end? What purpose would it serve the ARRL to spend their resources to "distance" themselves from Cbers? If anything, the ARRL is a business, and it recognizes the potential income by trying to recruit CBers into the ham ranks (And their membership $$$). So it's in the ARRL's best interests if they leave the door open to this potential source of income.

> he only way they can do

Does it bother you so much that there are law abiding people willing to put forth a little time and energy to try to reign in a bunch of lawless people? At least this frees up the "real" cops to go after harsher criminals, that you use to justify breaking a "little" radio law.

>
> > If you knew anything about radio law, you would know

>
> Huh, the CB spectrum in Europe is different from that in the US. Such is
> true for Australia as well.

You don't understand the ITU at all, I can see. All of the counties that have an HF spectrum CB service, have one thing in common, they are all low power. None are meant to have international communications capability. If a high power service were created, then, like hams, the operators would have to be able to understand Morse Code. You can't get around this international requirement, unless you run low power, which is why the FCC created a 5 watt CB service on 27 Mhz.

I understand that if you break the law, you suffer the consequences.
What *YOU* think, and your *Opinion* of the law, is irrelevant.

>

> Sure Dave, and what have you personally done to better our society? At least
> I can judge for myself what is beureaucratic nonsense and what is actually a
> social ill.

But you do not have the right to selectively ignore rules that *YOU* don't agree with, regardless of how you feel about them. You are obligated to follow all rules, or pay the price if you are caught.

You might not feel that illegal CB operation is a big deal. Well another person might feel that raping your wife is no big deal either. It's funny that people want to ignore rules, until a lawbreaker suddenly affects them. Then they want more rules.

> You guys would rather have our cops spending their time

So the real answer, until society wakes up from its "I'll do whatever I
want" slumber, is to hire more cops, so that we can bust every
lawbreaker.

> >If the rules are found to be outdated, then they will be changed.

Those "blue laws" are on the books because they are tough to enforce,
and seldom cited, and therefore, there isn't alot of incentive to go
through the trouble of removing them. Many of them were enacted at a
time when societal norms were much more strict then they are now. Now
that we've loosened up what is acceptable, and look what happens, we
have a generation of people that have no respect for authority, other
people, or preserving the common good.

> The only time they get involved with them is when they HAVE to.

Sure. They gave up because they couldn't keep up with the lawless
people. They go after the worst offenders only, as that is all the
manpower they can afford. That doesn't mean that they don't know what is
going on, or have a political position relating to CB.

> There is much more immature behavior going on
> on the amateur bands by supposedly higher trained LICENSED INDIVIDUALS than

> than on the CB bands, all things considered equal.

Now where is your data to support this statement? For your information,
it is a widely accpted fact that there are more CBers, squeezed into 11
meters, than there are Hams on all of their bands by sheer numbers. So
statistically alone, Cbers have more potential radio rejects than hams.

>
> >If CBers were disciplined and organized

When? I've been "playing with radio" for over 30 years, and CB used to
be very quiet, with orderly groups, and little interference, up until
the middle 70's. The only channel that was "chaotic", was the trucker's
channel.

> Nothing happened then,
> and nothing will happen now. Do you and your Ham friends actually believe

> absolutely have to.

You are basing your flawed logic on the assumption that commercial radio
stations are flagrently violating rules left and right. Such is surely
not the case. Commercial stations rely on their license to do business.
They are not about to risk losing it, by allowing rampant rule
violations to occur. Compared to the amount of violations on the
personal radio services, it is virtually nonexistant.

Most of your statements are laced with paranoia and conspiracy. I
suppose you think Kennedy was assasinated by the Aliens that landed in
Roswell, and are currently living at Area 51.

It is a fact that commercial interests are salivating for more space to run their businesses (God knows we need more pagers and cell phones). Ham radio is in a decline, and I fully expect that some lesser used bands will become realocated to commercial interests in the not so distant future. I also predict that hams will gain other bands (That are of little commercial value), as compensation. This has little to do with "pressuring the ARRL". This is just simple justification.

As much as I would agree with you that s9+ skip levels are nothing more than "noise", they are not the type of noise that a noise blanker can get rid of. Skip are still signals. There are many time that I can not hear any pulse noise, where a noise blanker was required. Other times, it's a different story.

If you are prone to lots of strong local bleedover (Thankfully, I'm not), the receiver with the best selectivity is usually best. Usually, you'll get better results with the noise blanker off. A NB circuit actually increases bleedover.

If you're not using the EXACT same meter and cable assembly, all
the way to the jack at the radio, and comparing the readings on
the EXACT SAME meter, you are NOT asking the correct question.

All an internal SWR meter is generally good for is just a relative
indication of SWR. They aren't that accurate to begin with, but
a minimum is a minimum. It could probably be adjusted, but why
bother? It's not a lab instrument! And you don't really care what it
is, right? All you care about is where the minimum is and a some
what ballpark representation of what's going on.

If you do care about it to the point of knowing, they go spend a couple
of hundred dollars on a good lab grade instrument.

Or buy something like a cheap RS meter for less that $30, and make
yourself some 'known' mismatches. Like a PL-259 with a 100 ohm
resistive load (right there 2:1 SWR) and 25 ohm (also 2:1).

  IT DEPENDS ON WHICH Texas Ranger CB's you are referring to.  There are still
a lot of Discontinued TR-296's around which ARE exactly the last (side mic)
version of the Cobra 148GTL.  All the current radios are based on the new
Ranger 696 board which is also in the Galaxy 959/949.  Good Radios which peak
up better than a 148/Grant, will do "channels", and many have features such as
Rogr beep, variable power & talkback already built in.

I have a RCI2900, which I had one problem where as the radio would "warble" when I first keyed up, meaning, the frequency would shift down and up from the tuned frequency within the first second of transmission - so on SSB, this resulted in a crappy sound.

The radio was sent back to Ranger, and I got it back, It still did the same exact thing. The problem wasn't hard to duplicate - it did it all the time, with any Mic, Antenna and power supply. Of course, I thought it had to do with my power supply, but after I got this regulated 35 Amp Astron - it was still doing it.

I think the newer radios are really good for the money though and I wouldn't hesitate to use the RCI2950 - although I prefer the analog signal meter on my RCI2900.

Alpha but have fun fixing it at home, and if you inherit any of their earlier 8877 amps have fun watching them get destroyed by parasitic oscillations.

Alphas are great looking and running amps when they do run, but it takes an EE to fix the goddam things because of all the protection circuitry involved.   Then again, it is this same circuitry which prevents someone from being an idiot with the amp.... :)

You might want to check your powersupply with an ohmmeter and see if it is already grounded to the - lead on the DC supply. If it is already grounded then you don't have a problem at all. check and see if - on the power supply is also chassis ground. It probably is.

That is a problem.   A noise blanker is equivalent to
CHEATING. :)   blankers cause recieved signal
distortion in some rigs, so its desireable to not have
to use it at all.

Noise blanker = the thing you turn on when someone elses
electrically nasty car pulls up next to yours.....

Dave, comon... get real... "not insensitive to peoples needs?" For chrissake, FRS was supposed to be done A LONG TIME AGO. Actually it was in the form of GMRS but what happened was they made the stupid licensing fees about a kabillion dollars and they attached all sorts of gay restrictions to it. The FCC has not been successful in bringing a radio service that everyone could use. And most of the reason is that every "peoples" radio service is designed to be so weak

and pitiful that it "shouldnt" require enforcement. FRS is just a copout for not opening up GMRS as a CB band(like it used to be), that's all.

Heil claims that their mic elements have a frequency response that is tailored for communications. They have two serparate elements, one has more mid-range presence that is for "getting" through and the other one is for "rag chewing", it has a wider response and sounds

more natural. I sound like a damn advertisement - don't waste
your money on these things. I believe they are a dynamic type element.

I can't use any other Mic but the Astatic D-104 TU-G 9 Stand. If you are
going to use a crystal element, be sure to match that high impedance element

to your (probably) 600 Ohm mic input. If you don't, it spoils
the low end response. Also, for good clean SSB audio, I reccomend
bypassing the built in pre-amp (and just using a simple matching circuit,
it will drive your radio plenty when you match the impedances correctly)

Also, I put a radio shack electret element
in another D-104 head, and replaced the back "cover" with another
"screen", so the head of the D-104 has that "Screen" cover on both
sides. For me, this has been the best sounding mic I have used and
it looks damn cool.

Bob.

The FCC is a meaningless organization that abandoned the
CB band a long long time ago.   You can forget about them unless
your causing a serious amount of interference. They don't
and won't care what you do, as long as your not interfering with
other (still regulated) radio services.

Dave this discussion is going nowhere because of the "point-counter point" dialogue being taken by the both of us. We can both attempt to humiliate each other in this public forum however in the end, neither mindset will change. The bottom line here is that you are entitled to your opinion and I am entitled to mine, of which I'm also entitled to disagree with yours, and you with mine. These same opinions are both philosophical and personal depending on which vantage point each of us lies.

What you perceive as my paranoia and disdain, I perceive as my own 1st hand practical experience, the datum of which is where my opinions are generated. What I perceive as your inflexibility or rigidness, may in fact have a justified basis with you personally.

We DO NOT need  more laws to combat idiots!  We have more than enough on the
books, even the Common Law, to prosecute such damage makers.  In  a
Constitutional Republic, Law rules.  In a COMMUNIST democracy, man rules
(more & more "laws."   2 Chronn. 7:14 IS the answer!    Dave!!!!!

I don't know if you need that particular model, but  I just ordered a =
kit from
Jameco for $9.95.  Tunable 100 to 108 Mhz, 9 to 12V.  They also have a =
stereo
kit for $29.95 which is tunable 76 to 108 Mhz, 9V.  Both are about 2" x =
3".

    Hello to all.=20
    I'm looking for this little tunable FM transmitter (87-108 MHz)that=20
    was made in the late 1960's by Kinematix, model number "IMP II".=20
    It's 3 x 1-1/8 x 2-3/4 in size.=20
    It's black and has a slide power switch on the front.=20
    A microphone could also be plugged into the top. It was tuned=20
    with a plastic tuning tool.  This gem is in the 1967 Lafayette=20
    Radio catalog for $39.95.=20
    Does anyone out there have one of these at the bottom of a draw?=20
    If so, and if it's in working order I'd like to buy it from you.=20
    Let me know how much you want for it.=20
    Please e-mail me direct at:    mrusso@hoflink.com=20
    THANKS, Mark N2FLF=20
     =20

No FLAME Donnie... he just wants to monitor 11-meters, especially 27.555
USB. And since he IS a ham, I trust he WOULD NOT transmit here.

Oh Rickeypoo.... Please see below...

Hello Shadow
Well Yes I did mean to get your friends stirred up,

>>>So, this would classify you as the typical ham that believes he has the right to come down on another class of people just because he has a license, right?

>>>>Racism at it's finest!

and yes in one or two I did come down a bit to hard but the fact is I'm only one of several who are doing this

>>>And you all can be classified the same way. Of course the CBers think the same about you!

the FCC is coming to 10 meters to get the illegal ops

>>>And for the "flip side of the coin", the FCC has and still is taking away equipment, issuing NALs, taking people to court and revoking licenses on the 75 meter and other bands...

>>>Before you toss stones, you better make sure that your houses are not made of glass!

>>>Ever been to the amps reflector? Where the teach other amateur ops how to build amplifiers using tetrodes with handles?

and to the internet to stop the sales of linear amps for use on 10/11 meters.

>>>>You have proof of this? I sure do hope so, otherwise, you are just spewing gibberish.

>>>Also, I am happy to see that you finally used a punctuation mark... Of course, this was about 10 sentences into the paragraph.....

>>>Better late than never, eh?

it is illegal to sell amps that work on 10 meter much less 11 meters

>>>>Umm.... That is not totally true. You can sell ANY amplifier as long as you are selling it in it's original state. This means that if you sell

an old Drake, Henry, Alpha, or any other amplifier that was originally capable of TX on 10/11, you are fine.

>>>You cannot sell a NEW amplifier, made after the cut-off date, that has 10 meters in it from the factory... If your amplifier is BRAND NEW, FACTORY SEALED, and includes 10 meters (as did the SB-220 kits that one occasionally finds unopened), you can legally sell those from a storefront.

>>>Also, if the device is for "EXPORT ONLY", clearly marked, and sold under the understanding that it will ONLY be used outside of the US or it's possesions and territories, you can sell anything you want. Henry markets an 8Kw amplifier that is general coverage, and will sell it to anyone that signs a waiver that states they will not use it in the US unless kept under the 1500 watt rule for amateur ops.

>>>Guess that kind of blows your story out of the water, huh? Don't believe me, ask Texas Star... Their new CW amplifiers have passed FCC inspection!

only after you prove that you have privileges on that band can you modify the amp (that is for 10 meters)

>>>Not totally true. Only after you have proven to the MANUFACTURER can they give you the instructions.

>>>Anyone can have a modified amplifier that covers 10 meters.... Using it withot the proper authority (a ticket??) is what is illegal.

Shadow I know I sound like a mean old SOB and really I'm not

>>>No, you sound like someone with a vendetta and hell bent on cleaning up the 11 meter band. I agree that something needs to be done, but not the way you are doing it.

>>>Betcha hate it when people talk shit about 2 meters and the other CB typical ham bands...

>>>And to think that you are only a tech plus.... Shows that you are not that far away from being a CBer yourself!

I don't hate CBers I was one once even had a license for 11 meters back in the 70's, and as long as they abide by the rules we have no problems

>>>WE...... WE.... WE.... What, do you have a mouse in your pocket?

>>>As long as we don't have to listen to the hams that think they are the RF police of the world, we CBers don't have a problem with them, either!.... But your type doesn't leave us alone, either!

heck if you want to run 10 killowatts on 11 meter fine!

>>>>O.K., so your other statement about 5 watts being the legal power (which is complete BS, it is 4 watts) we should just throw out the window, although in your last statement that Shadow got you chastised anyone that ran more than the legal 4 watt carrier!

>>>C'mon... You can't change the laws, nor can you modify them to fit your needs / arguments. Don't be wishy-washy.... Come up with one complete story and stick to it!

But it doesn't stop there the 11 meter band is so full of trash that ya'll are coming up to 10 meters and trying to trash it out.

>>>No, I don't. As a matter of fact, the only radio that I have that is capable of 10 meter operation is my TS-440SAT.

>>>>I suggest you stop calling all CBers like they are one in the same, or I will believe that it is OK and start calling you the same names that I call the assholes that propogate hate and racism and other problems on 75 meters, or the "KerChunk" operators that I find on 2 meters here in Houston!

>>>Don't try to lump an entire service as one. Not every talk show host is Howie Stern (another idiot)... Not all CBers are "running to 10 meters to trash it"..

>>>Hell, upgrade to a General and get off of 10 if it bothers you so bad!

The only way to stop this is to make ALL cbers abide by the rules heck most need to read the rules

>>>>As well as you do! So far, I have caught a couple technical mistakes!

If you talk more than 155.3 miles you are in violation

>>>>Wrong... Attempting to talk more than 150 miles is against the rules. Not talking it, just attempting (unless it is in a MayDay situation. Then their are NO rules).

If you modify your radio your are in violation

>>>>Not totally true, either. You can modify the RX section all you want. You cannot modify the frequency determining circuit whatever. You can also modify the transmit section, as long as it doesn't do more than a 4 watt carrier, 100 percent modulated.

>>>Like I have been saying... I suggest you learn the law before spewing!

If you connect a linear amplifier to you rig your in violation

>>>Guess what?? The first right answer you gave! Although I have a catalog that markets amplifiers for LEGAL use of channel 23...

>>>>Can you guess what the purpose was? And yes, they where legally sold and used on channel 23..... So, that rule can (at least somewhat) be kissed away, too.

Any one of these can result in a fine of at least $2,000 to $5,000 fine not tell me how many of your friends can say that have not done at least one of the above?

>>>>And show me how many contest operators have not run in excess of 1500 watts PEP during CQWW? I mean, what do you really think the Alpha 2 hole (2X8877) amplifier is for? It is capable of 5 to 8 Kw output and sold to the amateur market!

As far as your get together I think you call them keydowns the company and friendship is fine just get rid amps.

>>>>Why should we listen to what you say? Are you THE AUTHORITY??

We have the same thing called shoot outs but it is vastly different it is a one station at a time talking to a distant station and the judges at the distant station award the prizes to the best signal it is done with better antennas not megawatts of power.

>>>Where is this done? Are you talking about field day? If so, it is a far cry from a CB Shootout!

>>>>I have participated in field day, and they pale (suck) in comparison!

No I don't know Mr. Hollingsworth personally I have talked to him on the radio and he does (or at least his staff) answers all his email.

>>>>Great... This makes you his CB Rambo?!

Fell free to email him about my actions his email is rholling@fcc.gov.

>>>>Thank you, but I can read www.fcc.org myself. I don't need you to tell me what is on their.. Obviously you do, though, as you where completely unaware of the rules and regulations that you spouted about CB radio!

I have already emailed him what I am and have done.

>>>>Great... And we care why? Does this give you the authority to act on his behalf? Should I expect a NAL to be coming via E-Mail from you?

If he tells me I wrong and to stop you will hear no more from me or my friends.

>>>I wish that was the case now!

73 (means best regards)

>>>>No shit. We used that on CB 30 years ago!

Negative, they are actually made as a new RCI, by RCI, on a new board, sorta
a cross between the 148GTL and the 2950.

Also, they look a lot like the new Connex CX4400.

Is it a high drive? yes/no, either way 400Watts is about all it does, if you are using your base amp's 12Vdc converter at 12 volts, or 18, the finals in the amp can handle 20. 18 is safe for all the parts in the amp, you can get more than 500 at 18 volts.

no, it does not do 11meter out of the box. try the same jumper trick as a
2950, then you get all the channels.

This is what I got.

FM PLL TX 2-3 WATTS

R. Scott Communications LTD   phone 250 642-2859

They also got some 20-100 WATT

Its in Canada, don't know if they still sell.

Got mine for about $300. Its fully assembled, got a jumper switch block =
to
change freqs. Get about 1/2 mile on my setup.

xman Charlie

We will be happy to repair your amp for you, but as a do-it-yourself project, you need new torroid coils, don't wind them yourself(rfparts.com) also, your "pills" are almost deffinately fried, check them like you would a diode, or use a transistor checker, either way, get the matched quad from rfparts.com, and make sure to re-bias the new transistors when you install them, they won't be exactly the same as your previous configuration, unbiased means heat, and heat is of course bad.

And in the future, the Wilson has the metalic foil on the bottom of the antenna for a reason, that's your ground, ungrounded means high SWR, and hence..heat.

Hi,
I just got a 18 WX ST CB radio from cobra and a ATW-400 Dual band for CB and
Weather antenna.
The thing is when I am listening to the weather it is not clear.
I bought them both from cobra. Do any one have any coments?
CB for 34.99 and Antenna for 27.95. CB was factory reconditioned.

Do I really need to use SWR?

Help. Thanks.

Anthony.

How many watts should *I* drive it with, you ask?

NONE. I don't want to be rounded up by the FCC and beaten about the face with pickles because I chose to use an illegal, awful, vicious, demonic linear amplifier.

I think linears are all infested by Satan and smart people like myself and RF Enforcer should hire a High CB Priestess to exorcise these demons and get rid of all of the sinners who use linears.

The radio should have nothing to do with the antenna swr. If you were analyzing the swr, you might not even have the radio attached. I presume you were looking at a meter on two separate radios. You should presume that neither meter is correct and opt for a third known-to-be-good meter. Let's review. The first radio gave you readings of 1.4:1 at the outside and 1.2:1 on the center frequency. The second is giving you 2:1 at the low frequency and 1.5:1 at the high with a middle frequency of 1.2:1. Looks like the antenna might be a tad long for Channel 1, but don't trust any internal swr meter. Even the cheap RS meter is not a bad model and for 20 bucks, you might consider getting one. Try a third meter and find out what is realy going on.

SWR readings for both radios were taken with an in-line DOSY meter. The only thing different was that there was a different radio at the end of the line...

But separately from that, I notice that the Lincoln's internal SWR meter is consistently off by .5 from the DOSY...

There are several ways. Radio shack sells a cassette tape set on learning Morse code. There are also several computer programs that teach the code, one being Super morse. Do a web search for it. Also check out these web sites:

Does one radio put out a lot more power than the other? I have noticed slight variations in SWR testings when using radios that put out different amounts of power. It really shouldn't matter, but set your SWR while using a simple 4 watter. If you've got a 1:1.3 measured with a 4 watter, it may read as a 1:1.6 with 500 watts behind it, even though you haven't touched the antenna.

In reality the radio should have nothing to do with the SWR. I'm just telling you what I've seen. (hey, maybe I'm not in reality! <g>)

HTML><FONT SIZE=3 PTSIZE=10>Date line, Oct 20, 1999, 10:22 AM, Washington DC.
Tom Banard assistant to the director of enforcement, FCC's Wayne Thomson,
stated the following dureing a unannounced low keyed press conference.<BR>
<BR>
Quote: Since the local law enforcement, has recently been given authority to
act on, and to correct nuisances generated by illegal amateur radio operators (
free banders). We no longer see the need to fund the branch of our agency in
charge of enforcement and licensing of amateur radio. It is our opion that
our efforts and funding will be better spent on the so called new frontier.
Other wise known as the internet. <BR>
Operators who are now licensed must continue to abide to all present day guild
lines, until Feb, 1 2000. At which time a press conference will be held
announcing what additional bands will be allocated to commeral use. What ever
is left will be ui\tilized much as citizen band radio is now, with no
licenseing requirement. <BR>
To sum it up. The federal (FCC) government will no longer have jurisdiction
over the frequency allocated to amateur and citizen band radio.<BR>
It would be possible that what is now known as freebanding, would be legal
providing local and state laws did not prohibit the practice.   <BR>

Well !!! To tell you the truth, I made this up. But wouldn't it be neat if it
were true.

Sure you can. Although, if your antenna is over 3 feet, I would recommed one of those tripple (or quad) mag mounts (unless you like watching your antenna fall over in the rear view mirror). But the single 5" magnet will work fine for anything up to 3 feet and should also handle the 4 foot wilson flex or the 4 foot firestik firefly, becuase these two antennas are so lightweight.

And if you go with the Wilsons, you can just cut that ground wire off, since you really have nowhere to ground it, doesn't harm anything.

Don't know the mod, however if the radio has a band .45 MHz higher then the regular band, you will still miss .445 .495 .545 .595 & .645 without a 10 Kc switch or an unlocked clarifier with a lot of slide. These gaps correspond to the "A" channels. The frequency will also jump around between CH 22 to CH 25 just like the regular band. This is due to the channel selector.

You can improve the SWR reading but not the performance.
In other words, at this point, lowering the SWR further
is just an exercise that you can do to build up your
level of experience if you choose to--it's not going to
improve your range.

> So I was not going to leave good enough alone. I lowered it slightly and the
> SWR on all channels went up! I tried again and finally let it bottom out in

Go the other way.

> So I raised it finally to about .5in(guess) off the bottom of the base. It
> went down. Now it is 1.1 1.4 1.5.

Keep going in that direction.

> I am trying to understand what I am looking at. I thought the longer the
> antenna the higher the SWR while the shorter the lower. This sure seems to
> be working in reverse. (Remember this is a K40). Is there something I am
> missing.

What you're doing is attempting to make the antenna resonant. It's the radio version of changing the length of a tuning fork in order to make it ring (vibrate) as efficiently as possible at a certain frequency. Normally, as the antenna gets longer the resonant frequency decreases. However, that can reverse when the manufacturer uses odd multiples of quarter wavelengths of coax. That's how it works with the K-40.

This is probably more than you need or want to know.

> The K40 instructions says to raise or lower whip so both (1 - 40) match.

That's the correct thing to do.

> This would seem to indicate they will approach each other or spread from
> each other as you change the length. What I see so far is they all move in
> same direction.

The Channel 1 reading will come up and the Channel 40 reading will go down as you go. When the Channel 1 and 40 readings match the SWR will be lowest on Channel 19--that's the best you can do assuming the normal 40 channels is where you operate.

> Can you help me understand what I missing.

What is it that you're so confused about? Use a pad and pencil to chart the SWR readings on Channels 1, 19, and 40 as you make your adjustments. You'll see a trend. Just go in the direction that leads you to the proper result (SWR equal and below 1.5:1 on both 1 and 40). Base loaded Wilsons and K-40s are no-brainer antennas. There's nothing you need to understand--just do the tuning and be done with it.

If you are using the same (inline) meter with each, then regardless of
that meters accuracy, there is a difference between the two radio's
output impedence. Perhaps one radio is actually slightly off of an
exactly 50-Ohm impedence?

This would easily explain a minor shift in the SWR curve, but not a major
change in the depth of the curve, as you are experiencing. (unless you are
using a very narrow antenna, or an extremely long coaxial cable run)

If you are using two meters (of the "in the radio" type) I would suspect
inaccurate meters.

It's best to think of any antenna as just a plain impedence, that varies
with frequency. It will always have the same SWR curve, no matter what,

when hooked up to a 50-Ohm radio output.

The topic of radio output impedence is one that really intrigues me. Has anyone had experience with, oh, 75-ohm radio? Is there any major advantage, other than standardization, to keeping all the CB/Ham gear at 50-ohms, and all the cable TV and reciever type gear at 75 Ohms, or 300 Ohms?

On 20 Oct 1999 23:38:07 GMT , Robert Joshua spewed forth to rec.radio.cb:
:RJC>I just hooked up a new radio (Pres. Lincoln) to my antenna setup and
:RJC>noticed the SWR pattern across the channels (CB) is different from that of
:RJC>my original radio (Grant XL). I used to have near 1:1.2 on 20 and about
:RJC>1.4 on 1 and 40 with the Grant XL. I actually can't even get this same
:RJC>pattern with the Lincoln; for example, if I optimize the reading at 20 to
:RJC>be 1:1.2, channel 40 is about 1.5 and 1 is about 2, but channel 10 and 30
:RJC>are about 1.4 each. It seems the "U" range is smaller for the Lincoln. I'm
:RJC>not sure I understand why this is, other than the fact that it's a more
:RJC>broad-banded radio than the Grant.

:RJC>Another thing is that the SWR reading on the Lincoln is
:RJC>consistently .5 units lower than what I measure on an in-line DOSY. Is it
:RJC>just inaccurate?

:RJC>Suggestions, comments are greatly appreciated...

i have one and i love it.
i can't remember off hand which transistor to pull for the modulation limiter because it's been a while but if you pull it, your mic. gain is still in control.
with just adjustments to the pots inside, you can get about 8 good watts am with reasonable swing on a stock mic. you can get 10 but you loose swing that way.
on ssb, you can get 20 watts pep, all with excellent audio quality.
just turn up your "am power" pot to 8 watts on a watt meter and your "alc" pot all of the way for 20 watts. mine has been set like this for 4 years with no problem.
DO NOT adjust the final and driver bias pots near those transistors as you won't gain anything and may damage something else.
if you want to expand your channel "listening" capabilities, you can install an expo 100 kit for 40 up and down.
if you ear a ham, you can do this and change the crystals for 10 meter ssb.
the board is a little tight for a 120 channel expansion but with a little patients, you will be rewarded.
if you are feeling froggy and if uniden hasn't changed the circuitry in the last 4 or 5 years, the final and driver are almost, if not, identical to the

pres. 2510.
if you use an outside HEAVY DUTY power supply, you can install the 2510 power mod.
again, if nothing's changed, it is the same board , almost, as the rad shack TRC-454.
the adjustments and mods are the same with the exception of the clairifier mod.
in my opinion, it's a great radio.
good luck and have fun.
jeff

Raggman, the only problem I have had with RCI2950 was solder joints on
the voltage regulator. It is mounted to the side rail and the leads
make a 90deg. bend onto the main board.

For a base antenna the best practical omnidirectional antenna is a 5/8 wave. You can still find some 3/4 wave antennas but the difference between 5/8 and 3/4 isn't worth the extra cost. If you want directional then try to find a Moonraker 4 or 6. Those antennas were awesome! You can take a 10-meter ham yagi and tune it pretty easily for CB. For base, don't bother with any

short, loaded antennas. They are a waist of money. For moble a 102" whip
will give you the best performance by far than ANY short antenna no matter
what anyone says.

Hello Robert;
If your using the same antenna and coax, as you have stated that you are. And that the SWR is the same on both radios into a dummy load, it sure sounds like the Grant has a better output filter. That is that the Lincoln has more harmonic output than the Grant. If you have or have access to a lowpass filter, you could easily verify this. The Harmonics (say at 54 Mhz) would be reflected from the antenna, but wouldn't be by the dummy load. Thats probably why you are seeing the readings that you are. Hope this helps

Hi Michael,

I wanted to see if you could recommend a radio for me.

I want a 10 meter radio as I will be getting my ham license, but I also want to be able to talk on CB with the same radio.

I also want good SSB ability, and good power, something between 50 and a 100 watts.

I don't need echo or roger beep.

I want a good quality radio.

This radio will mostly be used for mobile operation in a mini-van.

I am leaning in the direction of the President Lincoln.

Planning on using a mag mount Wilson 5000 antenna.

Thanks,

Duane

Every situation is different but I can't even imagine trying to solder a piece of coax back together. Disassemble the base of the antenna and reattach the coax to the base of the antenna and when complete, seal it up to make it weather proof. This might be a good time to replace the entire coax run.

Hi Mike,
>>Forget about all of these linears, and get something commercial! Get a
>>TenTec Hercules, and SGC, or a Harris! Quit running that 11 meter only
>>stuff!!
I beg to differ on most of your post.

I run all this equipment!

Never had a problem using a Hercules which was a MK2. Good reliability
and clean signal through the filters.

I have two SGC cubes. Initially had burn-in problems while I got a
handle on all those crazy status lamps and the thing tripping out all
the time. Mainly through either overdrive (current trip) or the damn
temperature trip (I run a stiff RF Speech processor which drives the
finals hard). It has run sweet since without problems on all bands at
around 600w out on a peak Bird.
>
>All Junk cept Harris.
I currently use a RF3200 transceiver as the main mobile rig. Eats all
the current smd mobile riceboxes for breakfast with good front end
filtering and a real 150w out, though it's never used due to driving
amp's.

I have never had a Harris amp.

Find me one PLEASE.

Here's a somewhat bizarre question for you.

Since at least _some_ forms of radar guns receive in a range that also falls in the amateur allocations (to my understanding), what is the result if an amateur is transmitting on such a frequency within the reception cone of the radar gun? Will it influence the speed reading, render it inaccurate, or be filtered out?

Rick

Interesting theory, but the 54 Mhz harmonics would also sum in the forward vector and the ratio would remain the same. More likely the radios are not each the same output impedance. They vary widely. The internal TVI traps are usually adjusted at the factory by hand, and will effect the output impedance also. Remember that your radio presents a 50 ohm purely resistive output impedance at one and only one frequency. Minor reactances from that center are normal, and will vary from radio to radio. I'd imagine even from the same product line.   What you are seeing is normal.   Adding a low pass filter would change your readings, yes, but for a variety of different reasons, losses, internal reactances, etc, not neccessarily related to the antenna load.   Also, SWR meter scales are not always linear.   You may find that they give identical readings for one SWR point but not another. Minor tolorance issues....   Don't loose any sleep over them. But they are great learning tools. Regards... 0

We have the President Lincoln "converted" (26.000MHZ to 29.999Mhz) and tuned for $369.99
,That's with our one-year warranty. This is the new model imported from France, it has the new 60 Watt final (MRF454) and all the features of the old model, plus Automatic Squelch Control. But if you aren't looking for that exact radio we sell the RCI 2950HP that does about 45 Watts, and the Superstar 3900HP that is a little cheaper, but does 60 Watts as well. The Superstar doesn't have the LCD display, but it is easier to operate and has SSB, AM, FM, and all the power too.
    The Wilson 500 has the bandwidth to support any of these radios from the top to the bottom of their frequency ranges. I would recomend any of these radios, all have the features that meet your request.

This only true if you mount it on top of a van, which looks funny, if you
mount a 102" whip on the bumper of a van it will not compare to a good 5'
loaded antenna on the roof of a van or car.

if your gonna do serious ham work the best bet is a lincoln with the 50 dollar
chipswitch. youll have more features and a better radio than any others out
there and it wont fall apart from driving like some others. check
http://www.chipswitch.com for more info. youll even have a good 12 meter radio
for when you get your liscence.

it has been said that it is illegal to sell 10 meter amps to keep them out of the reach of people like you and me.
there are legal amateur amps on the market that, with proof of license, you can get the mods from the manufacturer for.
it has also been said that hams can use "illegal" 11 meter amps on 10 if they lie and say they're home brew. where the logic is in that, i don't know as they can build their own. why not let them use them pre-built as long as they pass fcc muster?
i asked this same question last month and this was the answer that i got.

here we go again with someone who doesn't know what he's talking about trying to scare people with garbage information.
if one is caught using a "cb" amp, it is NOT a "criminal act". the confiscation of one's equipment and the money one pays out is called a CIVIL FORFEITURE.
there is NO criminal procedings involved in any way. this is why the fcc writes rules, NOT laws. it's easier to get away with the things that they do that way.
if you're going to play cop, prosecutor, judge, and jury, please go to law school and find out what you're talking about first so you can give accurate information.

HI all:
Sorry about the broken link, I have corrected it below.

A fellow tech & ham is looking is looking for the following CB Photofax Vol.'s:
230; # 256; #273; #286; #287; & # 289, please e-mail him direct at the following: n2wv@yahoo.com he is willing to trade off with Auto Fact's Series.

I have several CB Photo Vol.'s for sale, the list can be found at the following:
http://home.att.net~j.dow-kb2tlb/home.html/phfact1.htm
there you will also find the Contents of, the Make & Model's, in each Volume.
If interest you can e-mail me, right from the page(s) or via the link here:
kb2tlb@worldnet.att.net

Tnx,
Jim/kb2tlb

end

Is the Wilson 500 a good antena worth getting to put out 200 watts with a regular 40 non altered Midland 77-113? I have a little will but some people told me that the little will will not work properly with 200 watts. I also have a Wilson 1000 magnetic but it's too big for a car. I wat to be able to put the antena and the wip inside the trunk until I'm on a highway taking a long trip to check on bears and stay awake. Anticipated thanks for your help with this!

Then there's the psychotic ramblings of mf_luder, who's now taken to posting as Diana Glompers.

Just what is it about these radio newsgroups that attracts these loo-loos? Too much RF from portable radio antennas or lead fumes from soldering coax connectors?

The bright side is that while these nutcases are obscessing on the internet, they can't be ranting on the air.

>Interesting theory, but the 54 Mhz harmonics would also sum in the forward vector and the ratio would remain the same. More likely the radios are not each the same output impedance. They vary widely. The internal TVI traps are usually adjusted at the factory by hand, and will effect the output impedance also. Remember that your radio presents a 50 ohm purely resistive output impedance at one and only one frequency. Minor reactances from that center are normal, and will vary from radio to radio. I'd imagine even from the same product line.   What you are seeing is normal.   Adding a low pass filter would change your readings, yes, but for a variety of different reasons, losses, internal reactances, etc, not neccessarily related to the antenna load.   Also, SWR meter scales are not always linear.   You may find that they give identical readings for one SWR point but not another. Minor tolorance issues....   Don't loose any sleep over them. But they are great learning tools. Regards... 0
>

Hello O;

Interesting information, but I stiil think its caused by harmonics. I will explain why I think that:

He states that when fed into a dummy load the SWR was the same on both radios. If it were a output impedance difference in the two radios wouldn't the same effect be seen? That is the SWR being different on the two radios into a dummy load?

If you were to feed a 54 mhz signal (assuming a second harmonic) the SWR on a 27 Mhz antenna would be higher than you would expect being fed with a 27 Mhz signal. So the ratio would not be the same.   I think that its this SWR from the harmonic signal that he is seeing on his meter.

As to Copper selling refurbs or not....that isn't the trouble.....The problem with Copper is their service SUCKS bigtime. Whenever there is a problem with a radio from Copper (often) , they give you major shit when trying to get the situation corrected!
You would do better checking with other online dealers and avoid them like the plague.

I read somewhere many years ago, that the reflected radar signal
is changed in frequency by the doppler effect to the tune of
31.5 Hz for each mile per hour.

I would have to agree with this, after running a CB shop here in colorado for years and having people bring their Copper readio's in for repair because copper jacked them around for so long that they gave up, i wouldnt order a damn thing from them again. We did order a whole LOT of HR-2510's from them a few years ago that were supposed to be NEW IN BOX radio's which turned out to be re-furbs. Over 50 of these damn radios. Luckily only a few had problems.. I would avoid Copper unless you are buying stuff such as antenna's, mic's, parts etc.. As said above, things suck all around at Copper, My suggestion would be to talk to Rich at Left Coast Radio.. http://www.coaxkid.com.. i've dealt with him in the past and he has a very good reputation with the public and is a great guy. If i had to rank all the shops on the net, i'd say his is #1, Bill at Bills 2 Way is good too from what i hear, his site is http://www.bills2way.com. Both Rich and Bill back up everything they sell and will work with you through your worst radio nightmares :)

Just my 2 cents :)

David

Newsgroups: rec.radio.cb

Hi folks,

I recently had a PC122XL installed in my Pathfinder and I can't seem to make sense of a couple particulars with this radio (seeing how I'm a total Rube when it comes to CB, this is no surprise to me).

1. I've noticed that when I press the mic key, the RF meter lights up, ostensibly to let me know how much power I'm transmitting with (the manual seems to corroborate this). When I press the mic key in USB or LSB mode, the RF meter lights up for a brief second, and then goes dark...even though the key is still depressed...Is this normal?

2. I have yet to get anyone to acknowledge my presence on AM, LSB, or USB. I'll wait until I get a good strong signal from someone, then when there is a break in the conversation I'll chime in with "Breaker, 1-7" (for example). Nobody EVER answers. This has been the case as long as I've had the radio, and I"m starting to think that something is wrong with the mic or something. Anyone have any tips on how I can get some response from fellow CB'ers?

Would either of these problems be affected by SWR? (I had the thing
professionally installed, and am assuming that they did a good job in
tuning up the antenna).

Thanks much,

Jonathan

I have seen 2x2879's swing a bird 43 forward to more than 700 bird watts at only 19 volts, I know I will probably get flamed and called a liar, but it is true, and there is no need to tell me about harmonics because this little 2 pill is real clean it puts only one spike on the spec analyzer and that spike is right where the radio is transmitting, but it sure is hard to get all of them to do these kind of numbers.

That depends. If you have a metal toolbox, that makes a great place to mount a centerload antenna such as a Wilson 2000, or 5000 Trucker or any exposed coil antenna. Long whips are great on the box too, but can be too tall. It all depends on what kind of talking you do,and how practical you need to be. If you don't have a box you can mount a whip on the bumper. A lot of guys around here love the mag mount Wilson and K-40's stuck up on the roof. Hope this was of some help.

Help !!!

Been working on my DX-55V for a no audio problem, found that TR16 squelch switch was clamping down the audio, when the bias was removed from it via removing R60 the audio was normal. Found this signal comes from IC1 a LM324 quad op amp, replaced it with no results, then removed 8V from squelch circuit problem still there, removed D28 xmit switch, problem still there, if pin 10 of IC1 is pulled low with resistor to ground audio is fine, but otherwise pin 8 keeps TR16 biased and shuts down audio. If anyone has an idea or seen this problem before please email me. Thank you all for your time, appreciated it !!!

I've found the same thing with my northstar 3000. If I leave the
variable power setting on low it will give me a different swr reading
than it does on high or medium. Granted I'm not using the best swr
meter in the world (Rat Shack) it still changes depending on the power
setting I have it on.

     There's a big difference between being told you're
     wrong and being proven wrong.

     I'm just like the next guy; I hate being told I'm
     wrong and will usually speak out against the person
     telling me I'm wrong.  On the other hand, when I'm
     proven wrong I just have to suck it up and move on.
     Any continuing rebuttals beyond that point are just
     the mark of an insecure/immature person.

Perhaps the amplifiers work okay, but lots of people have been
returning the SGC2000 rigs.   The icom marine rigs are much
more reliable. (sad to believe but true) then theres this other
company that people talk about but I forget their name... that make
marine HF transcievers....

>>
>>All Junk cept Harris.

They make one, although I think it is designed for base use, actually
I think it is a 1KW ssb transciever....

Is the RF3200 current production rig?

this is not one of my stronger suits but this makes sense because the lincoln
is a broader banded radio with broader banded output filters than the grant
which would allow more harmonics through.
2 cents spent.
jeff

There's the Mt. Beacon ARC hamfest on Sunday, Novemeber 7th at the
John Jay high school, RT. 52 in Fishkill,N.Y. For details go here:

http://www1.mhv.net/%7efritzing/hamfest1.htm

It's only a short trip North from Yonkers!

73,
Tom

OK, here's something else that's interesting. After tuning the antenna for
a 1:1.2 on channel 20 on the Grant, I switched over to the Lincoln and got
a reading of 1:2.2 (on channel 20). I needed to _re-tune_ the antenna in
order to lower this below 1.5. Funny thing is, and I mentioned this
before, is that with the dummy load, both radios read the same SWR...

i was under the impression a transistor was limited to a certain output at
certain volts before being damaged. is that right? once you see the max for the
# of pills you have i dont know how a mod to the amp can see more watts.

Go out and check your radio with the engine off at various times of
the day. If you hear this noise exactly the same every time you
check, then theres something wrong with the radio. However, if you
sometimes hear the channel really quiet and clear, then the only thing
you can probably do is turn down your RF gain when the noise comes up.
Also check your antenna connections, maybe there is a short.

I've often wondered how you guys get an antenna 90 feet up in a tree?
Do you climb the tree to mount it?  If so, aren't you scared of
falling out?

You might want to look at the I-Max 99. It also has a wide bandwidth
and is cheaper than the 2000.

Use RG-8.

I heard a guy on 37 LSB say that the Shure model #257 is a good mic to
use but I can't find it anywhere. Right now I'm using a D-104 turned
down to 5 and get good reports. I asked this question because I've heard
power mics aren't good to use on SSB.

I don't reacall the K number (they use the K10's now) it was a grey unit with a black face. The lockout was about center of the unit and had three rotatable numbers and (of course) the "lock" set button. We used it for VASCAR (Which I'm still certified in) because it also had an elapsed time feature.

Almost exclusively Kustom Signals K10, and now a couple MPH units (which I'm not all that impressed with) The MPH has the same direction feature, but it's a real pain to get a tracking history with.

We apologize to the many folks that were offended by our high retail prices
on our website,
we didn't realize rec.radio.cb was such a discriminating group. But since
you seem to know a fair price when you see one, maybe you will appreciate
our super-low prices at www.exportradios.com/preffered.shtml

If anyone finds lower prices on the NET please let us know.

>falling out?

I use tree spurs and a climbing belt. Use a rope to repel back down. But I

was a tree trimmer for 10 years so I have that equipment on hand. Tree spurs are like the pole spurs that linemen use except they have a longer shank to pierce through the bark deeper. Have you ever seen a lumber jack show and they race to the top of an 80 or 100 foot pole? Same type of deal. Once you get to the top you tie in around the main trunk. Coming down is easy, just kick out and lean back. Just like repelling off a rock cliff. Of course pine trees are so easy with all their close branches no spurs are needed really. Keep your weight (feet) in close to the trunk and the limbs will hold you fine. If you know how to do it fear of falling doesn't exist (well almost doesn't). If your not a little scared then your not a safe climber. Some guys rent or know friends with bucket trucks too. (cherry pickers) But when it's in a back yard many times a truck cannot get to it. You can use the tail of your rope that your tied in with to pull up antenna parts. The tail of the rope hangs down to the ground. When you descend, you go down and the tail goes up. You have to keep an eye on your tail as if you run out of length you hit the ground hard! You must re-tie before you run out of rope. With the spurs you can run up and all over a tree like a squirrel, but practice makes perfect. Proper knots in the rope are needed as well. If you don't know them, DON'T TRY IT. You can find or contact your local electric company to find out where a tree trimming crew is (they trim around the power lines) and then you can stop and ask one of the guys on the crew if they will come put up an antenna in a tree for you. For a small fee, one guy usually will on a weekend or evening, I did anyway. A 90 foot pine tree is like a walk in the park, if you know how to do it.
That's how I do it anyway. Hope that sheds some light on your question.

Mike

Sammy, Sweetie, pleeeeeeeeeeeeaaaaaaaaase!

mf_luder is a troll, a una-basher, and a crotchety old loser.

I, on the other hand, am a breath of youth and freshness, bent on
raising the level of repartee here, confidence in our future in this
lovely hobby, and on finding a studly male ham with a tall tower.

Bob, which antenna is best is open to great debate. I personally use

the Wilson 5000 and like it very much. Others like the open coil types
and they seem good also. As far as the "best" method of mounting drill
a hole in the middle of the roof. It will give you the best performance.

Bah! Ses you. It's also the 'right' thing to register my guns, get a permit to
carry them, license every boat, car, motorscooter, bicycle or baby buggy. Soon
you'll be registering your computer in order to use the internet. F*** you and
your license and the bureaucrat who road in on you.

Who needs a 'no-code-tech' ticket. i spend most of my hf time on the 20mtr cw
part of the band anyway. cw is funky and a stupid thing to force on people but
it is sort of fun if you are half-way descent at it. ya gotta practice once in a
while to keep the speed up but it's like any other useless thing people work at;
(playing and instrument etc) some think it's fun others don't...

'been on the ham bands for almost 20 years withOUT registering my rights away to
the federal socialist police pigs. Anyone with enough money to buy a radio

should just go ahead and do the same. Signing that license is basically giving away at bit of what little protection you have from the government. Don't be an idiot, just bootleg.

Hi Guys!

Like new. Extra freq's, peaked and tweaked (modulation and power output), etc. A real LOUD talker in beautiful shape. Includes a minuteman II astatic power mic.

One of my backup rigs - need the bucks.

First $125

Am in Southern California - 91343

you should ask people in the UK cb newsgroup. these radios have been there for
a while.i hear there cheap knock offs of the 2510 style. i hear there good

radios but made in italy and not the best quality.

The K-band RADAR has a frequency of 24.15 GigaHz. This is an FCC allocated frequency and is not shared with the ARS.

A few years back, some students at Georgia Tech devised a "jammer" that operated at this frequency. The device was found when a student was stopped for another infraction and the officer's RADAR kept displaying a steady 55 mph target speed (even though the student was stopped at the time)

I don't know where you read that at, but it's really really close.  (31.4)
waves per second shift per 1 mph.

We charge a little more for the conversion and tuning process, but since you think that's too high, I'll lower my price on the unit $30.00. We appreciate your comments, we like to hear from the people that enjoy the products we sell.

I used a five foot Firestik II with a tri-magnet mount last year. It worked pretty good. If you decide to use a long Firestik with a tri-mag put a heavy duty stanless steel spring on it. You might also want to use a heavy duty quick disconect like the Hustler QD2 (pure stainless steel,) as well.

Thomas-distributing sells the President Lincoln for $374.99 Unconverted as a 10Meter radio.
If anyone has seen a lower price on "Converted Radios" than ours please let us know, we try to be competitive. We will usually match or beat anyone elses price for the same product in the same condition, with our one-year warranty included. Thanks for your response. Come see us at www.exportradios.com

They do work on the Doppler principle. I don't know the exact details though. Arnie? In the 70's they were checked in the field for proper operation by striking and holding a tuning fork in front of the unit. If it gave the required reading, the unit was working correctly. The officer was required to testify in court that he tested the unit (and that it was working correctly) both before and after the violators tickets were issued.

Also the radar units were used to check calibration of the police cars mechanical speedometer. When you point the radar unit forward out of a moving car, it will read the cars speed. The speedometers were often off by 3 to 5 mph. A calibration correction chart was kept for each car, and was required for testimony on any tickets written using the cars speedometer.

Some more tricks played by radar cops in the 70's:

Parking at the end of a runway and measuring the speed of aircraft (just for fun). Some officers in stationary cars were too lazy to turn around and measure a car coming up from the rear. They just aimed the gun at the patrol car's rear view mirror and read the speed. If you could see the car in the mirror, so could the radar gun. Officers in a speed trap often would use several guns side by side. No interference was noted. I think that if there was interference, the gun would just refuse to read, rather than give a wrong reading. The officer was still required to make sure the visual estimate agreed with the gun's reading as a precaution previously mentioned...

The maco is supposed to have a wider band coverage. The I-Max is better than the 1600. The I-Max handles the weather better and is a lot easier to put up (only 6lbs). Also the imax might be safer in a lightening storm. I have a radio that covers 25.165 to 29.655 my swr's are 1:1.7. They stay under 1.3 till I get to 28.315, then increase from there.

Hello Kent: The Motorola CB Radios used a "Motorola Commerical look a like mic".
This mic had a internal pre-amp and a adjustable volume control.
The mic cartridge is a dymanic type, a wire would around a magnetic. The super
thin dymanic mic wire is famous for breaking, resulting in the mic not
working. I used a old Commerical Cop type Motorola bullet proof mic. A good tech
could wire it in. Also the popular pre amp mics might work in the
Motorolas. Or even a new or different mic dymanic cartridge.

Hello Tracy: DEAD WRONG AGAIN! For someone who is supposed to have a big beam, you sure have a lot of "out in left field & and plain don't know" answers.

Hello Sheila: What type beam antenna do have or are you talking about, and what type ground plane antenna are to talking about. It is possible to have the ground plane antenna to close the beam antenna causing the beam antennas patern to be distorted, or act as a omni directionan antenna.

Please let me know, I can help

Jay in the Mojave

Sheila wrote:

how far apart should your groud plane antenea ,be from your beam antenea, and should they have separate ground wire. thank you

Robert,

VSWR is a voltage ratio. The error is probably in the graduation of the
meter face. It could also be an erroneously set trim pot inside either
unit. The objective should be to shoot for the lowest VSWR. This will
read the lowest on any meter. If you like, you can put a 50 OHm dummy
load in placeof your antenna and check for a perfect VSWR but I think
you'll find that all meters agree with a perfect 1:1 VSWR reading.

at $76 a pill from rfparts.com that would be $304 just for the transistors when i could buy a brand new amp for $299 from left coast radio. i'm not saying im not going to rebuild my amp its just that $300 to fix an amp is a little pricey and also that people say to use a set of matched quads however no one will say why. i assume you get better performance but what is the performance increase? and is it worth it when single pills are $17 a piece?

Michael Faulkner wrote:

Yes and no. The theory is correct but; they don't, and haven't
considered the real world (actual) gain of a stainless steel 102" whip
compared to better antenna (sometimes shorter) designs.
That does not mean that the 102 is not a good antenna, and it
does not mean that other antennas can blow it away either. It means
that some antennas can show marginal gains over the 102.
If these antennas are shorter, then that antenna truly is a gain.

true statement both have won, and as you know side selection and many factors play to who wins on any given day if you run either amp you have a great chance of winning. In my opinion for all intensive purposes they are basically the same, don't take this the wrong way but when an x force wins I feel that same person could have used a davemade and won also , just as if someone used a davemade and won they could have used an x force and won just as easily it also goes to show the dominace of the design being used.

Sir I have to agree that is for the uninformed consumer another antenna scam, selling point. Just like "yeah it has a gain of 9.9 db gain" and its only 18" tall but it has 3 coils that shoots the signal ---------> out like this for 25 miles, and the lower part of the antenna below the coil that prt of your signal is going to travel 10 miles where as the top part of your antenna only reaches 10 miles so which part reaches the guy who is 12 miles away the part that radiates off the coil or the part that radiates off the whip at the top, hmmm boy am I cornfused....

Galaxy radios are manufactured by Ranger Communications, so it then comes down to features. Go with the 2950...if you want a base station version of the Ranger 2950 mobile, get a Galaxy DX 2527 base. No, Copper Electronics does not sell refurbs...they do have some items that are very low use that have been previously sold and returned that are offered for sale. But, they are listed as being so low use that they are " Like New " in condition, but in fact are not new. This is clearly stated on the website, and in the printed catalog. So long.

Right again, ex-law enforcement one ... :-)
Doppler is the principle on which RADAR is based. The principle simply
states that a signal's frequency is changed based on its relative motion.

As taught to police officers in RADAR class:

When there is relative motion between two objects, one of which is
transmitting wave energy, the frequency of the signal as received by the
other object changes due to that relative motion. How much the frequency is
increased or decreased is determined by the exact *speed* of the relative
motion.

  >Also the radar units were used to check calibration of the police cars
>mechanical speedometer. When you point the radar unit forward out of a
>moving car, it will read the cars speed. The speedometers were often off by
>3 to 5 mph. A calibration correction chart was kept for each car, and was
>required for testimony on any tickets written using the cars speedometer.
>

Tuning forks are still used to *test* the calibration of the RADAR unit.
Typically a 65 mph fork and a 35 mph fork are used. The test must be
accurate to what? Plus or minus one mph.
The only thing that has changed since the 70's is that the test may be
conducted prior to and after shift (normally eight hours) and will still be
acceptable.

>mentioned...
>

I've heard of most of these *uses* for RADAR. One that was used in the bad "old" days was to select a speed on the "lock" feature (which is no longer available) and snooze until a speeder woke you up. (not much of a tracking history there, huh?) Not that I ever did that.

Regards,

Arnie -

And I agree with you, it is not the best performer in my book by any means,
I dont care what the books say, not for all around transmitting, it is to
cumbersome and it will only perform if mounted on top of a good
counterpoise, thats just my opinion of what I have seen throughout the
years, it is not worth the trouble you get with it.

I agree that they are both good, but I see the same numbers out of other amps as well. I didn't say all amps but others. a lot of the winning brand has to do with where your located in the united states, one of the reasons so many people hear about Dave boxes winning is because there is so many of them out there, now IM not ragging in any way, just saying it like I see it in the south.

Those are theory, mostly old. The whip works real good in some case's, but

in most case's a good loaded antenna will outperform it because of its
mounting restrictions.

I cannot tell you if anyone is still making this but I can tell you that CPI incorporated that light in its receive preamp box. It was not just a stand alone light although it would be real easy to make one if you could print the actual sign and backlite it.

Some meters need a little more than 3 or 4 watts to read accurately. This having to do with the sampler and the diodes used. Also, do you recalibrate the meter when you change frequencies? If not, I could suggest that your Lincoln may not be putting out the same power across the band as the other radio and this would change your "u" graph to show a higher swr on one or both ends.

Another suggestion is that the Lincoln may be reacting differently to the swr than your other radio. This could mean that the power from the Lincoln could change depending on the swr/impedance it sees. In one instance it could like the impedance and load into it better on one end or the other or someplace in between. Depends on the tuning of the Lincoln's output stage.

I must point out that if you're seeing an swr below, say, 1.5 or so I would just leave it alone. This is a very good reading and attempting to get below that would just be an excersize in tuning. There really isn't anything to be gained practically unless you envision running several hundreds to thousands of watts.

Off hand I would say its a combination of the radio's tuning and the meter's sensitivity or ability to read correctly with low power.

If your not scared .. your not human. The tree is in the woods behind my house. I read the post that indicates that I should use tree spikes and a belt, If I can get some of those I will "try it" but my original plan was to nail steps on the far .. or "woods" side of the tree so that if I had to do some maintenance I could easily get back up there. (the kind you see going to tree forts and such.) Or maybe put up another antennas for other

band operation below it.
I think that from the posts I'll get the I-Max 2000 for 10 - 11 meters. Cost
of an antenna at <$100 is not a problem and the 24 foot length may get out
better than the 18 footers. But I do have a good question. If I intend on
using one antenna for both 11 and 10 meter operations, Is there a single
legal radio I can purchase to cover all Freq.'s across the 10 - 11 spectrum?
That gut at ExportRadios.com seems to think that his President Lincoln
converted and tuned for $369 will do what I want. (but how can that be
legal unless you can chop the power when on 11 meters to 4 watts somehow? I
play by the rules so that others may enjoy the same hobby when on 11 meters.
Makes it more challenging to DX also.

Yesterday I DX'ed on upper 28 from NH to FL! (yes on my stock 148 gtl st and
the Wilson 5000 that you recommended.)

Funny that nobody confirmed nor suggested coax.
I assume that the RG-8 is ok for a 150 - 170 foot run.

Rick

I think your wrong Jay,cross polarization of these 2 antennas would make them almost invisible to each other,this effect is pretty pronounced on 11 meters,thats why mounting a yagi(horizontal) part way up a vertical tower won't degrade the patterrn enough to worry about.
Why don't you agree? I'm open to a little education.

A CB radio is licensed, there is just no paper work to show for it.
Check the manuals you get with the radio. THere are FCC regulations that
you must follow. Simply posssing the radio makes your legal and licensed
to use. Both FRS and CB are the same.

I agree that we're both entitled to our respective opinions. The fact that I support the rules and regulations, and you try to justify breaking them pretty much decides who's "right" in a legal sense. Now, whether the "popular" opinion swings one way or another remains to be seen. Sooner or later, people will get fed up with other people who ignore "inconvienient" laws, and something will give...

That being said, I just enjoy the debate. I am far from the "Joe Legal" that I may sound at times. I have no real problem with people running power or extra freqs as long as they do it responsibly, and cleanly (Which means that they not cause undue interference to other people). I have more of a problem with the social misfits. I really have no time for people who use CB as some form of mental masterbation, with foul language, inane comments, jamming, music playing, excessive noise toys, and no sense of the word courtesy. I would rather have the band full of 1 KW stations running in a respectable and courteous fashion, then a band full of 4 watt mental deviates.

But again, that is just my opinion, the law still stands, until someone changes it.

> that's all.
>

The state that GMRS was in, was done at the request of the PRSG and other "serious" users, as a "barrier" to prevent GMRS from becoming another 27 Mhz CB. People often wonder what became of the original CB users, that wanted CB to be what it was originally intended, a short range personal radio service. Those people mostly moved up to GMRS, to escape the sewer that has taken over 27 Mhz CB. People who want to be able to depend on their radios to get necessary, and possibly important messages through without getting jammed by some 15 yr old mental midget auditioning to be the next Howard Stern, or another guy trying to talk to bumfutz Kentucky, from northern California.

FRS was designed with avoiding "another 27 MHz debacle" (a quote from an early interview over FRS) in mind. The idea is SHORT range radio. I agree that FRS range is probably TOO short. If it could be made to carry 5 miles RELIABLY then it would be better.

News flash! GMRS has relaxed much of its licensing requirements. The price is cheaper, and the forms easier to complete.

But what do you really want? Do you want to have reliable communications with family/friends, or do you want a free for all anything goes band? You now have the choice of both (As well as ham radio for those willing to put in a little work).

Heck if all you want to do is reach out and touch someone, there's
always internet chatrooms......

You're arguing semantics here. Depending on the case, it could very well
become a criminal case, depending on what the particulars involved
(Deliberately interfering with emergency comms is a felony as is

broadcasting a false MAYDAY). I've read of cases where people actually got JAIL time, for radio related actions. I'm not saying that this will happen everytime, but it has the potential to be considered "criminal", depending on what you're guilty of.

If it would make you feel better, change the word in my original statement from "Criminal" to "Illegal". The statement is still true.

The problem here is that different watt meters can give different readings.

You also have the users who insist on feeding their antennas with a given length of feeder, some resonant, some not.

Already you have several variables.

IMHO, and some of the more tech'd up can tell me otherwise, but if you want to get near the truth.

So for AM.

1. Firstly check your amp into a quality 50ohm dummy load on the bench with a good stiff power supply and the radio you intend driving it with.

2. Then, connect the rig and amp in the mobile. Use a non-peak but average reading Bird or similar industry standard power meter connected as close to the antennas feed point as possible.

3. Then, after tuning the antenna for minimum reflected power, make a note of your vswr reading.

4. Then turn the slug to read off your forward.

5. Then subtract your reflected from your forward and there you have it,

the true output of your mobile on AM under un-modulated conditions.

Yes, I know in a competition all this swing thing takes over from physics but...

My 2c, I mean 2p.

Phil / UK

I've been told they have better cpu rf shielding than most. Especially
the 2950's.

Quick post to simply say.. I dragged an old 139xlr out of my closet, threw a
ragged-looking D104 TUG-8 on it, and got it fired up... did the conversion
to allow coverage from 26.0850-28.0050. (Of course, I had to broadband it a
bit) Don't have the meters anymore so didn't touch the wattage (other than
adding a tad of swing), but attempted to unlock the clarifier. Funny thing

was, it increased the spread on the clarifier, but only on the receive- the transmit remained locked... this is my understanding of the mod:
1)Cut R-117
2)Cut D-30
3)Find the backside of the clarifier knob.Follow the PURPLE and BROWN wires and cut them just before they connect to the PCB.
4)Solder the PURPLE wire to an 8 VDC source.
5)Solder the BROWN wire to GROUND
Am I missing something? Or is this ancient rig just messed up somewheres...
If anyone can help, please do.. One other question.. besides crystal swapping, Supposedly this 858 chip is capable of alot more than the 192 "channels" I acheived. Normally, I wouldn't care, but this rig for some reason broadbanded all to heck- I seem to drop barely a quarter power when going all the way up or down.. so a bit more would seem to easily be handled...
Alright, I'll shut up, (yes I'm long-winded on the air too)   Thanks in advance, Tinker   (ch. 23, Central NY)

Ahhh....

Dummy loads are by design purely resistive. Antennas are
reactive.

If the tuning changes, then the antenna is interacting with your
radio.

I would suspect that your radio is NOT 50 ohm output, and probably
needs adjusted.

>

The antennas Sheila is using are the Moonraker Beam and Starduster Ground Plane antennas.

"Cross Polarization", nobody said anything about Cross Polarization. And if one of the antennas effected the other antenna, even in cross polarization the pattern would be unwantingly significantly distorted.

And I must disagree with you here, if the ground plane antenna is mounted to close to the Horizontal Beam, the beams pattern will be distorted, by the ground planes, ground plane radials. I have seen this on installed antennas, and have analytical measurements from Eznec, that show a distorted beam pattern. But to be fair, I have also seen the beams pattern not distorted. But the closer the ground plane radials are to the antenna, the more the distorted pattern effect will be. What makes the difference, I don't have the answer. But I will disagree with you on, you can not just put a ground plane type antenna up over a horizontal Yagi, and not have some effect on the Yagi beam antennas pattern. Most vertical antennas mounted above a horizontal or vertical, or a cross type Yagi beam antennas, are the fiberglass type antennas that do not have ground plane radials, and do work quit well.

Also the ground plane antennas that are available, (or should I say) still around, come with 3, and some come with 4 ground plane radials. If the ground plane antennas with the 3 ground plane radials, are mounted above a horizontal Yagi beam antenna, at least two of the radials will not be parallel with the elements of the beam antenna, causing the beam antennas pattern to be distorted, in such a way that it appears to be a omni directional antenna.

So a ground plane antenna with 4 ground plane radials, I would mount well over a 1/4 wavelength above the horizontal Yagi beam antenna, with the ground radials facing the same direction as the boom and elements.

Jay at jay123a@qnet.com .... In the Great Mojave Desert, just down the road ah ways from the fillin station.

Chris,

Its all a matter of opinion unfortunately. I think the D-104 is good not only because it sounds good, but it is easy to handle. I am not sure (no pun intended) about that Shure mic, but I hate plastic parts on mics. Its too noisy and squeaky when you key it up.

Also, don't you hate all those Civics running around Poughkeepsie?

Bob.

Chris wrote:

> I heard a guy on 37 LSB say that the Shure model #257 is a good mic to use but I can't find it anywhere. Right now I'm using a D-104 turned down to 5 and get good reports. I asked this question because I've heard power mics aren't good to use on SSB.

 Tie a long piece of string to the CB and stick it out the window. Wait for
the next windy day. Hope that the winds are atleast 20 to 40 miles an hour.
You should have all the swing you want. Hope this tip helps you out.

The BEST coil are the small ones, like on the Francis.  This way you don't
get ripped off for a HIGH power antenna, when you don't have high power.
Dave!!

You're looking at this backwards. The question should be:

If the FCC allows over 200 watts on 10 meters (which it does), why is it illegal to sell an amp for use on 10 meters? And the answer to that question is, it isn't.

First of all...it is not illegal to sell an amp for use on 10 meters, PROVIDED that it is being sold to an amateur operator for use at that operator's station.

Secondly...licensed radio amateurs are permitted to construct their own amplifiers for use in this or any other amateur band, and they may also sell such amplifiers to other amateurs, or to a dealer - which may then resell them to another amateur for use at that amateur's station.

Third...amateurs may also legally modify an amplifier for use on 10 meters (or any other band) at their own stations.

Fourth, there is no regulation preventing a manufacturer, or an amateur operator, from building a transmitter that can exceed 200 watts on 10 meters.

There are restrictions on the building or modifying of 10 meter amps by hams, but such construction/modification is not entirely prohibited. The reason for all the restrictions on 10 meter amps is to keep 10 meter amps out of the 11 meter CB band. Or that's the way it's supposed to work, anyway. Anybody who's listened to The (Toilet) Bowl lately knows that in practice, things aren't working out quite the same way the FCC intended because people in the CB band are still getting amps from somewhere - illegally, of course.

73 and good DX'ing,
John D. Kasupski

Ok, I've got the antenna tuned so that I have less than 1.5 from 25 to 40 (CB) and then 30 channels above that (to about 27.705, which aren't too useful for me). I'm going to try to lengthen the tuneable tip on the Firestik IBA-5 and move that on down to a more useful range of 1-40.

If the Lincoln _does_ have a problem with not presenting the antenna with exactly a 50-Ohm impedance, BUT I can get the SWR low on the channels I want, is it ok to use w/o adjusting or would I need to get it adjusted right away? and does this happen very often, that is, radios being off in impedance? The Lincoln is brand new...

The 2950 to me is the better radio, I have had both and i believe the 2950 has better ears and is more flexable but if you are going to use it for a base you need a good power supply also. 73s Oldtimer
Damon Breeden wrote in message
<17205-380FAD1C-84@storefull-113.iap.bryant.webtv.net>...
Galaxy radios are manufactured by Ranger Communications, so it then comes down to features. Go with the 2950...if you want a base station version of the Ranger 2950 mobile, get a Galaxy DX 2527 base. No, Copper Electronics does not sell refurbs...they do have some items that are very low use that have been previously sold and returned that are offered for sale. But, they are listed as being so low use that they are " Like New " in condition, but in fact are not new. This is clearly stated on the website, and in the printed catalog. So long.

I knew someone would not believe me, I almost did not say any thing about it but I figured what the hell, man it is fairly easy to get 500 bird watts out of 2 x 2879's with the right drive and 19 volts a little more at 20 and even more at 22 or 23, I have no way of proving it nor do I care to I was just making a point, thats all. its true whether you believe it or not, I myself find it hard to believe, but I do.

Rant Time:

I can't help but say this, how can anybody in their right mind sit here and look at shit like this. I am watching people posting the stupidest shit about coils. Flat vs. square coils, 2 vs. 3 coils.

Get real people, instead of making shit up - or saying what you *think* happens or on how something works - why not educate yourself? Why not learn something and KNOW it to be true before you come on here and make ridiculous statements?

Bang heads on mobile antenna - get over it - there is barely a difference in these antennas! Efficiency is all you can compare - there is no such thing as "gain" with these antennas. Nice animated GIF showing some cheesy arrows, yeah, that's how it all works.

Try, the angle-of-radiation is determined by the antennas height from (above) ground, and in most mobile cases, this distance is lower than a 1/4 wavelength. In most cases, this angle-of-radiation is very high, around 45 degrees at its lowest point. Drive your mobile up onto a big mountain, and guess what - its possible that take-off-angle could drop as low as 10 degrees - its all determined by the surrounding earth (related to its conductivity and height in relation to your antenna)

You bullshit about radios and antennas may fly with the local crowd where you hang out, but don't bring your false shit on here and expect to everyone to be as stupid as you (you meaning the stupid reader).

Bob.

A new radio should be right, right out of the box. If the impedance was more than 5% out of tolerance, I would be a little unhappy. Beyond that, get the dealer to exchange it or calibrate it properly; poor quality here might well indicate other poor quality detailing elsewhere. As previously mentioned, just connecting it to an swr meter and then to a dummy load of some sort is all it takes to learn the true impedance, and then the internal calibrations should be fairly easy.

This is an easy kitchen table job. Find a very short piece of 50 ohm coax--RG 8, 58, 213--any 50 ohm will do, but you only need a few inches. Properly attach a PL 259 to one end-solder properly. Use your ohm meter to verify that the circuit is open. Go to RS and pick up a 100 ohm, 1/2 watt or larger resistor. Use your ohm meter to verify that it is 100 ohms +/- 2%. On remaining end of coax, attach the resistor between the center conductor and the shield. Again soldering this is best. This will give you a very precise 50 ohm load. Be aware that you can't apply much power to this for very long, or get a fatter resistor! Attach your swr meter in series and it should be FLAT. If it isn't, then the radio impedance is not 50 ohms.

The truth is that most people on this ng have no idea what they are talking about, but then they shouldn't be expected to know much. CB was intended for a non technical group. The CB user should be able to buy the radio off the shelf, wire it up and talk. It is that simple. Anything beyond that is window dressing. Notice that there are very few questions about genuine repair issues.

A couple of years ago I saw 3 different HR-2510's have a similar problem. Their SWR was much higher than other radios (Grant ect) on the same meter, cable & antenna. If you physically took the top cover off the radio the SWR lowered in line with the other radios, but replacing the cover made it jump up again (we discovered this by accident). We were able to retune the antenna to a low SWR, but then it was off on most other radios. The people would have never known if they didn't already have a radio tested on their antenna. I wonder if the LINCOLN mentioned in this post lowers it's SWR if the cover is removed??

To solve delima #2. Go to channel 19 and say "Break 1-9 for a radio check"
You should get a few truckers yelling back saying it's working.

1. SSB output only occurs during modulation.

2. Get on 19 and tell 'em you're selling cordless extension cords.
   Be prepared with a good story, because that always gets a response!

Hello:
```

```
I just purchased a Astatic D104 Night Eagle Base Microphone.

I have a Galaxy Saturn Turbo Radio.........It has a six pin wiring
connection........Is there anyone out there who knows the wiring sequence for
this Microphone and this radio.

Thanks in Advance

******

Follow all previous directions and change resistor value to 50 ohms! For more power handling capability connect a pair of 2 watt, 100 ohm blue flameproof resistors in parallel for 50 ohms at 4 watts. I use a single 50 ohm, 2 watt inside of a pl-259 connector. Connect one end to the center pin and solder the other end pigtailed in a semicircle to the back edge of the plug shell.

Jack

How about a fan cooled, 500 watt dry load!

CNHOPE1 wrote:
>
> What is better a antenna that has a flat coil or a round coil?????????//

If you are referring to the wire in the coil itself, flat is better. It has less capacitance between the windings and consequently lower loss. However, I admit that at 27MHz you'd need a lab instrument to notice the difference. If you are talking UHF, the reactance from a round-wound coil will reduce the possible bandwidth of the antenna - when compared to a flat, or ribbon, wound coil. But you must also consider that the coils in VHF & UHF antennas are used for phasing. In a CB antenna they are used to shorten the physical length of the antenna for convenience.

I hope I answered your question. 8-D

Perhaps you misunderstood what I have said or mixed in what
others have said with mine.
Your radio wants to see an optimum antenna/coax impedance of
about 50 ohms so that it will deliver it's power to that system
efficiently. This is assuming the radio was tuned into a 50 ohm load
to start with. Since the radio is new and untouched inside, I would

bet the tuning is ok.

However, you may have a strange impedance happening due to coax lengths and the meters' own internal line length. This slight change in impedance might be affecting the way your radio see's the antenna system as a whole. If the impedance moves in one direction it can allow the rig to put out more power and in another direction it may put out less. You may be experiencing this.

With the broader banded radios the output stages can be a bit finicky in the way it loads into slightly different impedances than what it was last tuned for.

Someone also pointed out that you may have an appreciable amount of harmonic energy being transmitted from that radio. If this is the case you may never get the antenna system tuned correctly. As an example let me say this, if you have a lot of 2nd harmonic energy leaving the rig you will see that much more reflected power coming back because the antenna is not going to absorb that frequency and radiate it. The more reflected power you have the worse the swr will read.

Now I have seen some rigs that put out a lot of crap besides the intended frequency and these do screw with your head when it comes to swr. I haven't seen a Lincoln or 2510 do this unless there's something wrong with it. But it can and does happen to these two rigs when there's a problem in the final section.

The test to see if this is happening is to scrutinize the output with a spectrum analyzer. Not a likely scenario for you as these can be pretty pricey devices. In lieu of the analyzer, install a decent low pass filter directly after the radio and before the meter. If the output power drops more than say a fraction of a watt, you may have had some harmonics leaving the radio. If this is the case you'll also notice your swr falls back in line and follows a more normal trend. You will most likely see a small drop in output because the filter does introduce some insertion loss just having it inline. Again, this loss should not be more than maybe a 1/4 of a watt.

All in all, the Licolns and 2510's are very good radios and should provide you with years, literally years, of great service.

I have a President Zacary T and I love the thing, it's been a good

radio till now. Other than a dial a watt it is a stock set. The problem
is that when I key up and stay that way as you would during a
conversation, the lights go dim and you can watch the meter fall
quickly backwards showing the power loss. I get the same effect when I
have the set hooked up to my bench meter {Dosey 4002} This has got me
stumped, can any body help me out, I think it's the power supply.
Thank You
Joe

I think you wanted to say put a 50 ohm 2 watt resistor on the
end of that coax because using the 100 ohm resistor will show at
least a 2:1 swr.

Also, you can install this 50 ohm(or something pretty close) 2
watt resistor inside a pl-259 and use this as a dummy load.
Soldering the resistor inside the connector will provide some heat
sinking for the resistor and allow some extended operation at 5
watts.

Measuring the output impedance of the radio is a bit more
involved than this and most likely the radio is just fine.

    In actuality the omni mounted above the beam will change the
pattern of the beam somewhat. It depends on how close the omni is to
the beam and possibly the style of beam. This can happen w/o an omni
and just something in the near field of the beam. It could even be a
tree at what you might think is a good distance from the beam.
Everything in the near field of the beam can have some affect on the
pattern.
    Going a little further, the affect can be more pronounced at vhf
if you don't route the coax in the right direction.

I have a North Star 4000 and I would like to put in a Super Modulator,
will a Super Modulator for Galaxy 44 work in the NS 4000 ? I have been
told these two radios are the same.
Thank You

I have found Shure mics to be very good for most installations. They are very rugged and have quality cartridges and switches. I would consider using a Shure before a D104 although the D104's can be used just as well.

The Shure mics come either amplified or non amplified in mobile and base configurations. Depends on the model and what radio you want to use it on.

There's nothing wrong with using an amplified mic on SSB if you can figure out how to run it correctly.

Ideally you would run a mic that is close talked for keeping down room echoes and other noises. You can do this with an amplified mic as well if you turn the gain down.

Just find a mic that suits your voice and room acoustics and run with it.

As a sidenote, you can optimize the quality of your tx sound in the radio by carefully tuning the carrier generator to the filter characteristics and sometimes modifying the audio frequency responses of the mic amplifiers in the radio. Then just find a good quality communications mic that has the right response for what you intend to do with it.

Hi all -

Looking to buy a nice HyGain 623 or 623A base - 'twas
an early-to-mid '70s rig, back when radios were radios
;-)

Appearance important; minor electronic issues can be
dealt with.

Please reply directly to

wiese@jps.net

as I don't always get a reliable newsgroup feed...

Dude,

Lemmie Give you a piece of advice, If you want to maintain a Good reputation and be able to do business without hassle................

Get the HELL OUTTA THIS NEWSGROUP!

Becuase if you don't....

People will put in the "trick bag" and have you saying and doing things you never would do normally, this group out here are pure assholes, and they will do anything in thier power to trip you up, make you look like an idiot... anything for a laugh...

so, take it from someone who learned the hard way... STAY AWAY FROM HERE!

Signed,

The Radio Dude

swinging
> choke....

And what I said was....is that my Henry's plate transformer weighs more
than an entire Alpha. An Alpha 87A weighs 70lbs., my plate transformer
alone weighs 85lbs.. So what *I* said was accurate.

73.

Ok you are talking about modulated watts correct, I would say check the peak
power for starters if it is not in  proportion to the rms power they probaly
are false rms readings and just a case of overdrive. , What were the results
of the spec analyzer how many db was the 2nd and 3rd harmonic.?
If i remember correctly #12 said he can make a texas star 2 pill show big
numbers on a bird meter  What size slugs were you using I have yet to see to
many bird slugs that read identical to each other.

The ebay page won't load anymore so I put the pics on my own site. You can see this weird combo at:

http://Community-1.webtv.net/thumper485/WEIRDWILSON1000

I am very interested to find out how this can be done to a Wilson 2000.
Thanks

Uniden Washington SSB Base
Radio is a 9+ out of 10 condition
Has extra channels 26.815-28.045
18 watts variable PEP
comes with Turner Plus Three
Power desk mic.Paid over $210 for
both items when purchased.
I have talked all over the USA ,
Canada and some islands in the
Atlantic with this radio.Hate to get
rid of it but have other projects going
on.I will take $135 plus $10 UPS
shippng anywhere ithem US.Please
email above address if interested.
thanks==Mike

There are several dealers that read this group.....some that will go
nameless even like to spam the group with their crap......that would be
happy to give you a price on that amp......they should be able to beat that
price by more than a few bucks!

This is a Usenet newsgroup. It is not a mailing list. The only person
who can remove you from this newsgroup is YOU. So you can send
messages like the above until you are blue in the face, or you can
learn something about your computer and do it yourself, which is the
only way it CAN be done.

If you'll stop ranting like a dadblamed idiot and tell us what kind of
software you're using, someone on here might be able to tell you how
to do that...otherwise, you can remain clueless and the rest of us
will just killfile you so as not to have to read your sniveling every
week. Your choice.

73 and good DX'ing,
John D. Kasupski
KC2FNG, KNY2VS

Ok, some updates...I tried the resistor at the end of the coax but
probably didn't do it right since i got SWR greater than 3 (same
for both though). But I figure this is the same thing as a 50-Ohm dummy
load and they definitely show the same SWR with that. So, I'm guessing
impedance is not the issue here...

Regarding possible harmonics problems, would RS sell low pass band
filters? and what frequency range should it cover? or does that need to be
specified? and would Chipswitched radios have more a tendency to put out
these harmonics?

This morning i switched over to a different antenna, a Wilson NG-4
no-ground. With this antenna, both radios show the same SWR pattern! I

have no idea what's going on now...Maybe I need more grounding on the IBA-5...

I cant help but notice there are those with multiple Ham call signs. I realize that one can have a call for each club and/or repeater, as well as their own personal call, however why would anyone want more than one call to use in their day to day QSO's? Experienced Hams please reply.

Charlie 3,er excuse me its "candy man" now(wonder why he changed it?)is in my opinion a good one to stay away from.I have spent thousands of dollars there and while his prices are OK for a middle man(I now deal with HIS sources)he screwed me so much I could hardly sit down.90% of what I ordered was for resale,I recieved junk that had been previously opened,used stuff,a power supply without an original box or paperwork that didn't work and looked like someone had spilled (puked)raisin bran on it.All of this was a pain in the rear to get corrected but I kept using him because he is willing to sell the illegal stuff that gives such a great profit.

The last straw was a very expensive Galaxy 1000 base amp,when I got it the box had no padding at all and the tubes were already installed(not good).When the customer came over we plugged it in and all the tubes crashed,seems one had a shorted filament,I should have checked? The hell I went thru to get help with this and the out of pocket was too much,the tubes I bought from him as replacements were not the good(?) Galaxy tubes but some flimsy looking sweep tubes,plus after playing with the amp and giving it a good look it was obvious it was a piece of crap even if working properly.

Don't know about Bills and everybody knows about Copper.I hear
"Skipshooters in
mt is good ;)

Find a regulated power supply of about 10 amps or so. Start at Radio Shack. I believe that they sell one. It might be a little more expensive but it is easy to get.

  Any radio can talk worldwide barefoot.
  I think the 2950 is a better rig for anyone who may someday want to
get on 10 meters because it works well there and the Galaxy is a joke on
10.Plus the 2950 doesn't have a transvestite board.

Hey why dont you ask Gun what his two pill does, this might be a little
easier for you to swallow since it would be a Dave box doing the
unbelievable numbers.

Thanks man. I did say that on a average a two pill generally does around 500 or so bird at these volts we have been discussing, this one is just one bad mutha!!!, I do not know how I could of explained the situation any better, but I knew that it is hard to believe, but it is true and if you noticed, certain people did not reply or flame because they to have seen it out of

some of their 2 pills, again it is not real common, but very feasible. Its
seems about as crazy as seeing 8 x 2879's deadkey 4000 bird watts, and stay
together for 30 seconds @ 20 volts and not blow, crazy but true.

It won the two pill class in Lubbock, it has only been blown once out of ten
keydowns.

You can only have 1 US callsign at a time. Clubs and repeaters sometimes use a different callsign, but an operator only has one US callsign at a time. Personally, my US callsign is KF4KHC and while I was stationed in Korea with the army, I was HL9HCT because I was operating in another country and was required to obtain a reciprical license. There are also lots of Korean hams who have obtained a US ham callsign too by taking the tests on US military bases there and they use the callsign when they visit the US.

Where did you see a ham with more than 1 callsign?

If you go into an electronic shop and ask for a reasonable power-supply that is suitable for a CB radio they should be able to help you. If not, a 5 - 6 Ampere Regulated power-supply is what you want and if your rig got 10 -20 Watts output I would recommend 6 - 8 Ampere.

well if you should ask Gun i think he will tell you around 500 watts, which
is still alot of watts for 2 pills , but you are saying 700 watts which is
40% more than his unbelievable numbers

it is nice to see that kasupski is so helpful and kind and considerate to
those who are having trouble with their internet mail software, and it is
also nice to see that kasupski is now a spokesman for cb radio ng, i like
the pronoun 'we', except when this bozo uses it i, the great one , would
like to be left out of its connotation when used by the likes of kasupski
and his ham radio agitaters, .....icm out........

yeh i was going to ask that question myself , but i wanted to save it for
later. especially in the case of kasupski, who seems to get some kind of
cathartic response from telling everyone how smart he is. i guess the
multiple call signs are his way of trying to make him feel superior to us
old cb types,....icm out.............

Well, yes actually. They are not LAWS, but RULES. Regarding any potential criminality, that would indeed depend on the situation.

One thing is for certain: If you are unfortunate enough to become a 'target', you can count on LOTS of various charges being brought against you. This is done to ensure that before it's all over, you will be found guilty of SOMETHING.

No one walks away scot free. Ever.

I just thought of something else... in some cases, hams could have multiple callsigns because they have upgraded... when they started they got a "tech" callsign, then when they upgraded, they got a "general", etc... callsign. Only 1 is valid though. They could also had a callsign, then applied for a vanity callsign.

By posting mutliple callsigns in your signature, it may just be so others who have contacted you under an old callsign will recognize you.

Okay, what you need to do is turn your radio to the ninth band, put
your mic in between the cheeks of your ass and fart as loud as you
can.  This will cure the problem with the other 8 bands...

Tinker,
Firestick just came out with a Jeep specific mount. It goes on the drivers front fender top and protrudes from under the hood. The hard core dirt eatin' Jeep crowd on alt.rec.jeep+willys ng love it.

The second most popular spot on the TJ (97 and above) is where the others here have suggested - the spare mount. There are a lot of Jeepers that have gotten a flat bracket from Radio Shack and mounted it on the top of the tire carrier plate. On pre-97's the rear side external ball mount is the most popular.

Third place is behind one of the spare tire bumper mounts on the tailgate. If you put it there be extra careful to get a good ground.

I put mine (TJ) on an "L" shaped bracket that attaches behing the license plate holder.

Hope this helps...

Ed

The difference here might be the use of a peak-reader versus an
average (RMS) reading Bird.  In all of these debates that needs
to be specified.

     Test the radio using a powered, peak-reading meter
     (will show a peak of 15 to 20 peak watts depending
     on the tuning).

     Buy a modulator (small, adjustable, Class C) type amp.
     With it you'll be able to key at 2 watts and swing to
     over 100 on a peak-reading meter and 30+ on an average-
     reading (like you're using now) meter.

> Thank you.

     You're welcome.

I was looking through ads on eBay and came across a funky looking Wilson 1000 with tri-star radials integrated onto the brass mast with an adapter for the whip. I was wondering if the radials are beneficial and would work on a Wilson 2000. You can view this weird combo by going to:

http://cgi.ebay.com/aw.cgi/ebayISAPI.dll?ViewItem&item=184261930

Anyone know how they did it? I asked the seller but she knows nothing about the antenna. Shes selling it for someone else. Thanks in advance for any info.

I have used the f-prot program to sucessfully remove Happy99.exe
from a friends computer. Took 3 minutes. Download the free DOS
version at:
http://www.datafellows.com
See my previous e-mail for complete directions.
Have a good weekend.

A flat coil is better for wind resistance if it is mounted 'edge towards the direction of travel.'

Incidently, once a coil is flattened; it is called a "foil."

I use a 444D and a 526T series II (Super Punch). The 526T has become my favorite mic to talk on over the last 7-8 years of using it.
Please keep in mind I collect mics and own over 50 mics and have used most mics available including Heil cartridges in quite a few different applications. You might want to try the "10 DAL" head on the D-104 (sometimes called the sideband head) as it will knock down the background noise and has a different sound curve than the crystal element.

 I run a  4' Wilson Silver load mounted to the side of the toolbox. I tried
the middle first but the headache rack played havoc with the SWR readings.

Why would a birdie always happen on CH 13? Since they are internal
oscillations and they come thru at 2*IF, it seems strange for
this to happen on ALL bands on CH13.

I have a Uniden with weather band. It seems that if the RF gain is
turned up all the way, the squelch must be turned up all the way also.
If the squelch is backed off at all then the RF gain has to be backed
off at least halfway. Is this normal?

> supply.....

That's Strange... I've had my 3k Classic (3CX1200A7) for nearly seven years and it's still on the same tube at full output. Better yet, my friend who lives across town has had his 3K Classic X (8877) since the eighties with the original tube. You're the first person I have ever seen propose that having a heavy duty power supply is detrimental to amplifier performance. I think perhaps you've been hanging around the poster who once suggeted that hooking up one's coax to a car battery would amplify your signal.

My grandchildren will be using my Henry, quite possibly with the same tube still in place. Can you say that about an Alpha with it's dainty 4-watt grid dissipation tubes????? I think not!!!!

You're not totally hopeless though...I do agree with you about the Collins. The 30S-1 is still to this day a great amplifier.

I've had consistently good luck with the Shure Bro's products. If I had to generalize, I would say that their preamplified microphones do accentuate the higher audio frequencies a little. I currently use a 590T on my mobile with consistently good reports.

> As a sidenote, you can optimize the quality of your tx sound in

> intend to do with it.

I agree. I did an experiment years ago where I "opened up" the frequency response of a Realistic AM radio. Normally CBs allow about 300Hz to 3kHz of audio bandwidth. Mine was merrily passing 10kHz. Not too surprisingly, it splattered like a mad bastard. Interestingly, the bandwidth was so wide that many SSB, and better AM radios, couldn't "hear" me properly. With that in mind, most radios have an optimized audio passband that shouldn't be messed with. This is especially true of SSB radios where very sharp filtering is used. If you overdrive your mic preamplifier there is a greater liklihood that you'll be unintelligible on *some* radios, and not others. I use a Grant XL and find this radio to have very, very sharp Rx filtering which makes the "overdriven" radios sound very distorted.

Cheers!
Andy

If there is a strong signal present on the Receiver, this would be
normal.

Dave,

As I understand it, the biggest danger to CB linears is base stations, not mobiles. If one blows out his neighbors TV, that neighbor may hire a lawyer. When it gets to court, the judge may bring in the FCC. Based on their testimony, the judge can then render civil damages or ask for a redress if both parties agree. It equally pertains to both HAM and CB stations, under the law there is no distinction, a station is a station subject to FCC R&R.

I have had all the appropriate "in-line" interference filters during my urban ham days, I was covered as far as the FCC was concerned.

FWIW,

Greg

I have a 95 Country (Cherokee) and I've just this week got back into CB'ng, a strictly practical issue driving 80 miles a day on IS 80. After doing the Radio Shack thing, I returned some and hit a local pro. I loaded up with the K40 1/4 wave antenna (mag mount, smack in the middle of the roof for a good ground plane, about $70), and today purchased the Uniden PC68XL ($114). The results are very impressive. I garage the Jeep and that's a problem for CB, even 1/4 wave. The K40 has a twist quick disconnect that allows me to garage the Jeep and yet get great signal to noise. True, it's a pain to do anything prior to hitting the garage door opener, but it's not that big a deal with this rig.

Hi all,

My wife of 7 years "now" loves CB. Consequently, it was easy to get toys into the vehicles. Now to be honest, she's a tough customer on spending money. There are two reasons why this works. One is the commute on Rt 80. We were unusually in a parking lot situation just two weeks ago for two hours. She said near the end of the delay, "let me ask this rig". She asked, "how long is the delay?", the driver said "3 minutes". Sure enough, 3 minutes later we were moving. I looked at her and said, it's time to get CB in the vehicles. The second reason is that she has an awesome sence of humor and loves to Yak. So she has added "the boys" ("Drivers") to her list.

Another BIG and HUGE reason to buy CB is that our typical 50 minute to 2 hour Interstate commute, based on accidents, sun glare, etc. is that you are dynamically involved. You are just not sitting there pissed off in your box. You know much more detail than radio provides, and you can talk to the rigs and get updates. It's psychologically less stress during the commute if you can talk to others in the same mess, plus it's fun.

I'm a HAM radio operator, and I really think CB ("11 meters") is great. I find that the rigs ("the drivers") are 85% polite and professional. The other 15% are blowing out receivers, playing music, or are just gross beyond normal. Profanity is "normal" in CB and unless you are overly sensitive, it's not only "OK", it's actually amusing. Turn on your AM/FM radio, is "shock jock" talk any worse?

FWIW, comments invited.

Greg

I agree with MR. 137 the Alpha V 5/8 MACO Ground Plane is the best choice. Some will disagree. I have owed 10 base antennas and have built a few. And I always go back to the Alpha. It is strong antenna to, It lasted through 3 Hurricanes. The mast bent but the antenna didn't. I do suggest changing the 14 gauge wire on the gamma match to a 10 gauge. and I have used 5000 watts without problems. they are under $80 so it is prices right. Joe Gun antennas are a bit over priced but are just as nice.

Typical ARRL...

Gotta plug amateur radio whenever they can!

I would imagine that she has been exposed to the lovely world of ARRL and amateur already, and prefers to carry on a conversation with people, rather than tell them what kind of radio she is talking on.

If you read the entire post, and not just continued to have some preconceived notion of what you where going to say next, you would have seen that she enjoys talking to the truckers!

Jack,

Then what you are saying is my beam antennas (Moonraker 4, Maco 3 element and M-108) are all wrong?

Because it sure does seem to me that they exhibit a better signal when being RXed on a Dr. Crow double coil then either of my two single coils?

Also, would NEC be wrong?

We have run (as well as a couple other people on the group) antenna modeling that proves the statements that I made.

Not book stuff, actual, practical on the air tests...

I don't live in a book... I live with reality.

I suggest that you learn to do the same.

With it above the load like it is it would work like a capacitence hat, allowing a shorter stinger to be used, this does not do this if you put it below the load.

Chris wrote in message

The ebay page won't load anymore so I put the pics on my own site. You can see this weird combo at:

http://Community-1.webtv.net/thumper485/WEIRDWILSON1000

I am very interested to find out how this can be done to a Wilson 2000.
Thanks

Next you are going to tell me it is impossible to get say.....1200 forward bird watts out of a 4 pill, Man Im not sure who you are and am not going to speculate.....But I would be willing to bet you are off of the notheast coast, well man I am not going to argue no more I was not trying to convince anybody it was possible, or even feasible, just to make a point, maybe you can compete with it one day and you might be a little more convinced, I would also be willing to bet that you believe 700 bird watts is very possible, but not out of any other amp than a Dave amp............

Good Day

******

I'm sure you can come up with a better explanation than that. As to your comment referring to books and reality, I've never found the two to be at odds with each other.

There's a man with a bald head and a wooden leg who gets invited to a
Halloween party. He doesn't know what costume to wear to hide his head and
his leg, so he writes to a fancy dress company to explain the problem.
A few days later he receives a parcel with a note. Dear sir, "Please find
enclosed a pirates outfit. the spotted handkerchief will cover your bald head
and, with your wooden leg, you will be just right as a pirate." The man

thinks this is terrible because they have just emphasized his wooden leg and so he writes a letter of complaint. A week passes and he receives another parcel and a note which says, "Dear Sir, Please find enclosed a monk's habit. The long robe will cover your wooden leg, and with your bald head, you will really look the part. Now the man is really annoyed since they have from emphasizing his wooden leg to emphasizing his bald head and he writes the company another nasty letter of complaint. The next day he receives a small parcel and a note which reads: "Dear Sir, Please find enclosed a bottle of molasses. Pour the molasses over your bald head, stick your wooden leg up your ass, and go as a Carmel apple.

He who knows not and knows not he knows not,is a fool Shun him
He who knows not and knows he knows not,is simple Teach him
He who knows and knows not he knows,is asleep Awaken him
He who knows and knows that he knows,is wise Follow him

>bank?

If you're running under 1000w, the A99 will do you fine and is very simple to assemble and put up.If running over that, the I-Max 2000 would again be easy to

install.
I have had no luck with Shakespear, have had 3 defects in a row.
The Maco V58 is also a good antenna, but can be a little more intensive to
assemble and subject to oxidation lessening performance.

the coil acts like a bunch of stacked loops

and yes they do radiate
it is so little that i tend to ignore it and some times forget it
the radiation resistance is about 1/4 to 1/10 of a ohm
and yes it would be about 20 to 30 db down
but once it hits the ionosphere the polarization is so
scattered that it will be negligible compared to the vertically
polarized signal that the other station will hear
and yes it will make you stronger to other local stations
that use a horizontal antenna but is that not going at it
"bass ackwords" hi hi =:]
it will not tell anybody what the performance of the antenna
is with respect to the primary radiated wave
and no the horizontal beam should not hear a vertical dipole
vary well if you want to radiate a horizontal wave get one of
those HI Q loop and mount it on the vehicle
at least you will get about 2 1/2 watts out with 4 watts in
instead of 0.04 watts out horizontal with 4 watts in
you will work the locals a lot better but it will not make
any difference to the dx if mite even impair dx operation
because a horizontally polarized antenna has a higher
take off angle as compared to the vertical

What antennas are used at keydowns? I'm particularly interested in the ones used with 2 pill amps. Thanks.

I have looked at CRBs web page several times. And I'm wondering as being a beginer to cbs in the manner of wanting to get into mods, skip working, and all the real fun stuff instead of local talking.

Out of all the books CRB has which one would be the best for a beginer like me to get?

Depends one what kind of talking you want to do. If you want to get on the air with something that will do the job and not cost not an arm and a leg : the Antron is a good option. If you want to go a little bit better : IMAX 2000. If you really want to give you station the best antenna to work with purchase the Spectrum. It is aluminum, so you have to take proper precautions if you are in a windy area (IE dowling etc). I've had expierence with several base antennas, and this is simply put the best base omni antenna out there right now.

The short of it:

 Lowcost option - Antron 99 ($45 - 55)
 Medium cost option - IMAX 2000 ($80 - ish)
 Bang for the buck - Spectrum 1600 ($110 - hard to find but worth its weight

in gold)

Check out the sites online: www.bills2way.com or
http://www.dlcwest.com/~dx.comm/cbbase.htm
They will have prices and be more than willing to work with ya to set ya up.

Good Luck, :)

BREAK!
It has been a while since I have been in the group, so I will get to the point.

I have a 66v that was butchered (iron burns, clips, etc.) the radio works great except the NB will not work, I have noticed that if switched to NB+ the frec counter goes out. the receive is a little "goofy" if turned all the way up in has 20+ dB noise (on a quite night) I usually run it at about "1 o'clock". any suggestions?

thanks, PIEMAN   DX=143
(still baking with the Cookie)

It could also be that some people have both a ham callsign (KC2FNG) and a monitor station registry (KNY2VS), while certain other self-appointed know-it-alls around here are too stupid to know the difference between the two.

73 and good DX'ing,
John D. Kasupski

Check out
GoldsAuction.com if you haven't already. At least they are running everytime I go on. Ebay is down quite a lot.

This is an Ebay look a like. Nice Auction site.

Good point Rick,

What I REALLY want is that new Northstar 10 meter SB/FM rig tuned and
peaked. At $289 well wait to see what the fat guy in red brings.

Greg

Hello Wildcat: Yeah good point, John did it last time. John kind of reminds me of the hams I see when all the radio enthusiasts get together at the coffee shop. There really down on us CB'ers, and unfriendly, snotty, and just a pain to listen to. They usually end up setting by their selves.

Not to mention his snotty and technically incorrect postings. Pity!

The multiple Ham call signs problem that I've heard about, is a little mystifying. One of the 2 meter repeater owners in Los Angles (Roy Turner, of the famous 147.435 Zoo machine) has been contacted by the FCC about having to many Club Ham Call Signs, I believe. The rub is that he has to many call signs, but I cant find in any of the rules where its against the rules to have to many, or a set limit of call signs. Roy is a great guy to talk to, he has QST type (Ham Radio Related) broadcasts on the repeater that talk about all different types of radios and radio subjects. Quit a few people tape these broadcasts, and I love to listen to them. Everything from W.W.I, W.W.II, to present radio stuff, and his a nice flair for talking that makes the broadcast very interesting.

But what is mystifying is that, the FCC is going after Roy for all his club call signs. But the FCC isn't going after the bootleggers, jamers, and others who have violated the FCC rules for years and years, on the repeater. And I am quit sure that a lot of people have contacted the FCC for all these openly identified, bootleggers and jamers.

the hams here are very quite on this one. ive heard of that same case and others. its actually not illegal but a bad show of faith to have more than one call. some hams have been caught with as many as 15 callsigns. one family here in texas, every member had mulitple club calls. its a joke. this is one of the subjects hams will be quite on and hope the thread dies.

Hello Tim: I can't see anything wrong with the guys having all the call signs, they even pay
for them! Maybe the FCC can come up with more call sign base numbers, and sell them.
Yes I've heard of guys having a bunch a call signs, way over 15 of them. But at 15 dollars apiece (I think, or more) I say let em have all the call signs they want. I have a problem remembering my one call sign, let along a bunch of them.

Wonder what the FCC could make to sell CB Handles. Yeah 25 bucks a pop, and you get your CB Handle registered with the FCC, along with a registered number, on a fancy certificate. Have as many as you want. I crack myself up!

Hello all in the group.

I have a radio in the shop for repair and have been told it is dead and no
parts available for it any more. What is gone is the microprocessor I am
told???
Symptoms: No receive or transmit in any mode
                      No frequency display at all.

Question 1 - Will the chip switch mode bring it back to life?
Question 2 - are there any parts available for these 2510's

Thanks in advance.

Bob

forget abou the signal engineering antennas. i had one , its too flimsy, the screws wont hold, the fiberglass elements are too thin, the matching system is too weak. i could list much more. i got rid of the lightning 4 and brought a moonraker 4 a much better antenna. if you really want a good antenna I would consider the JO GUNN , its kind of pricy but a very good antenna. or the maco antennas. good well built antennas. If i wanted to spend the money i wold buy the JO GUNN. good luck on your decision. jerry!!!

If the processor is dead, Chipswitch should bring it back to life barring
any other unseen trouble. The original chip for that radio should be
available still but Chipswitch would cost you less.

Really? That is hard to take after I really thought I wanted it. How long ago

did you have one? I know the have been around since the early 80s or something,
and I was told (on the air by some guy who has one) that the antenna
has changed over the years, and the new ones are better. I am leaning
towards the quad antenna - and I think the Signal Engineering antenna
is the only maker of one.

I did hear the spreaders are like 3/8" - I don't like the sound of that!

Thanks for your input!

Bob.

Rick, did you not entirely understand what the man just wrote? His wife likes to talk to local people in the same situation as she is in. If she humorous, like the man says, then she is not going to want to talk to some old stiff necked, crothety old, go by the book, ham. (no offense to the hams out there intended) The main traffic channel is CB channel 19 anyway. I had to travel in Houston traffic and spend an hour or more in traffic just to make a 30 minute commute to work everyday and that CB really made the trip a lot easier. Why would she need 100 watts to talk to the driver next to her anyway. Rick you should have read into what was posted before your --couldn't resist urge-- came on.

Greg, You really do need some sort of communication device in every vehicle you have (unless you have a cell phone) just for the sake of - peace of mind-. A CB comes in extremely handy when the main road turns into a parking

lot.   If she knows her radios, the man in the red suit will have a good one for you under the tree!
Have a good time with it just the same. And for the sake of sanity.....NEVER BELIEVE EVERYTHING YOU HEAR ON A CB RADIO! Only the important stuff!!!

I agree!
I am always told to continue sending jokes. Used to be a time when myself and some of the origianls on this group used to share alot of info but this group got so negative about a year ago that I decided to only send jokes to the group in hope of lightening it up a bit. I guess it didn't help.

An individual amateur may only have ONE call at a time,club calls are something else and there was not a limit but now that some self-indulgent hams have abused this the FCC is looking at it.Be assured that hams are a little upset,but it really doesn't bother us too much,no big deal.If you want to talk about this ad infinitum go ahead.

What is one call of a person claiming to have multiple calls?I would be happy to find the truth about any calls held.

Not very difficult. Its just a whip with small ground planes at the bottom, and a small whip coming out of the bottom to go down into the base for the set screws to hold onto.

The DX skip is going berzerk right now. I guess those sunspots from a couple of days ago are the reason it is so good. Observers say they were the largest sunspots seen in 50 years.

While I don't believe that profanity should be used on any radio, there is an FM station in my area, I believe they are 100Kw, that has a daily talk show called, "Monsters of the Midday", which is so pathetic and stupid that it more than makes up for the rowday CBers that inhabit 11-meters.

Why does CB radio talk consistantly bring on bickering about different radio bands??? How do you know she doesn't already talk on 10-meters and has her ham license??

A 5watt 11-meter rig is the proper device for talking car-to-car in a local traffic jam. There is no better alternative for the price. Just leave it at that...

I have a select amount of NEW and PULLS . The tubes prices keep going up as
more and more tubes are burnt up by running them 100% all the time or not
loading them right . If you need a tube , E-mail me , I will get back to you
when I log on again which is usually once or twice a week .

Then whats the problem,clubs can legally get calls for whatever they think they need one for,JOTA,special events,field day and other contests,etc.,all perfectly legal.A few went hog wild with this and the FCC has dealt with that.

The situations quoted in the thread said INDIVIDUALS,not clubs.

HELP Can someone please give me some information on the Tram D -300.. Was it
the last one they made and how would you compare it to the 201A? Is it tube,
transistor or what, Iam lost. I dont remember ever seeing one. Do you know
where i might see a picture of one? I know these are alot of questions but your
help would be appericated.   Thanks Reg.

hey dad nice to see you back , did you enjoy your stay at the smack down
hotel?  oh by the way, is it true that bill clinton's presidential library
is going to be located at the little rock bus station in a couple of spare
lockers?  also, does it all this talk about cigars make you nervous? i know
that you are the voice of the ozarks, and when you talk people listen , so
would you mind going over and hitting old kasupski on the nose with a rolled
up newspaper. this would be punishment, doggy style , for trying to impress
everyone with his bogus two handle routine, ,.........icm out.....

The 510Xl is a rather small set. Do you really want to install a Potentiometer in it? Why don't you just drop down your carrier level to where it's best for your radio and leave it there. With a 240 watt amp I would try to get your carrier down around a 1/2 a watt or so, any more then that and you would be driving it to hard that's where distortion comes in. I installed a variable power hook up in my Cobra 25 LTD. It worked great but the only drawback was I was using it in the car and without a watt meter in line it's hard to know what power level you're at. Good luck with it.

hey son, good to hear from ya, the stay at the smack down was ok but I doubt if I go back.....the linen had bad stains on it, can't imagine what made them...and the pillows felt more like conctete blocks........

I havn't heard about the library, but sure 2 old lockers would hold it all.....and cigars always did taste funny to me.

as for kasupski, well I'll stay out of that one.   I try not to get involved in you boys petty fusses.....I have better things to do with my time.....Hey son,   just bought a new Bass Boat, its a Ranger with a 125 on it.....we'll have to go to the lake if you ever come home again......your old dog died, he ngot to where he just wouldn't eat. so guess he starved to death....

Excessive drive is most likely suspect, although a mismatched antenna system could also cause similiar damage. Replace the "pills" and start over.

That is a link that will let you download a small virus scan engine, then
do all the scanning over the www.... Thereby always having the newest
updates to your engine.

It works nicely, and there are very few virus' that this scanner won't
detect.

12 volt gel cell batteries for sale. Used but all load tested good. 30 day guarantee !!! Removed from burglar/fire alarm systems and replaced every 3-5 years with new ones as preventative maintenance for our customers. I have sold hundreds of these to the QRP boys on the QRP-L. I will stand behind every one sold 100% ! Prices listed INCLUDE shipping via UPS to your door.

12 volt 4AH --- $10
12 volt 6AH --- $12
12 volt 7AH --- $13

I have only a few 4's and 6's and about 36 of the 7's. Brands are mixed: Yuasa, Interstate, Portalac, Radionics, Power Patrol, MK Battery, Batteries Plus, Power Sonic and a couple of other brands. I do not and will not sell Panasonic brand as they have proven themselves to be total junk. Please email me with quantity desired and your zip code.

Has anybody figured out how to make this radio stay on frequency when you
turn it off and back on? It is mighty aggravating to have to retune it to
the band and frequency you want every time you turn it on.
Thanks in advance
Tony

By "tested Good" are you testing amp hour capacity?
Every Gel-cell I've measured from the alarm systems has always have SEVERE

amp hour degradation. (I've tested Yuasa, Johnson Controls, and
Panasonic.)

Hello, i bought a Mirage-RCI 2950 from Coppers Electronics and it
arrived in perfect factory fresh condition. No...i do not believe that
Coppers will do the modification for you, though it is very easy. They
sell a video that will show you how to do the mod. The Mirage-RCI 2950
is just a standard Ranger 2950 with the word Mirage stamped on the top,
no difference at all. There IS a different type of Mirage 2950 though,
it has a slightly different microprocessor that allows it to cover a
frequency span of 24mhz thru 30mhz when converted instead of the 26mhz
thru 32mhz that a Mirage-RCI 2950 or a standard Ranger 2950 would cover.

Its the Mirage MX-2950-EX. They are fairly hard to get, and cost around
$300. So long.

```

Two high school sweethearts who went out together for four years in high school were both virgins; they enjoyed losing their virginity to each other in 10th grade. When they graduated, they wanted both to go to the same college, but, the girl was accepted to a college on the East Coast, and the guy went to a college on the West Coast. They agreed to be faithful to each other and to spend anytime they could together.

As time went on, the guy would call the girl and she would never be home, and when he wrote, she would take weeks to return the letters. Even when he e-mailed her, she took days to return his messages .

Finally, she confessed to him that she wanted to date around. He didn't take this very well and increased his calls, letters, and e-mails trying to win back her love.

She soon became very annoyed with his persistence and now with a new boyfriend, she wanted to get him off her back.

So, what she did is this: she took a Polaroid picture of her sucking her new boyfriend's dick and sent it to her old boyfriend with a note reading, "I found a new boyfriend, leave me alone."

Well, needless to say, this guy was heartbroken, but, even more, so, he was pissed. So, what he did next was awesome.

He wrote on the back of the photo the following, "Dear Mom and Dad, having a great time at college, please send more money! I'm getting pretty desperate!" and mailed the picture to her parents.

Northstar's are Chinese JUNK !
 I saw something strange the other day.  Does anyone in the past remember
that "Churning noise" that starts out on Channel 40 & slowly moves lower &
eventually goes below CH. 1 ?  I heard some kind of a computer noise on a
BIG truck the other day that shows up on a couple channels intermittantly
that sounds similar but stays on the channel for a while.   Which computer
makes this noise?  It is picked up by different CB's in the same truck.  E
mail me with ideas @ truth@planetc.com     Dave

What?

You can   EASILY get more power PEP than you can average.

I have seen single 4CX250B amplifiers that where capable of WELL over 10
Kilowatts output PEP, but didn't do much more than 500 watts average.

If you are going to quote Dennis, I suggest that you continue to quote him
on everything he said, and not just what suites you.

It is not hard to get higher Bird readings (average power output) without
the corresponding PEP readings.. Most all of the MB8719 chassis radios that
I do will do nearly 9 or so watts Bird, but will not do much more than
12watts PEP....

So, that somewhat blows your argument out of the water.

 , What were the results
> of the spec analyzer how many db was the 2nd and 3rd harmonic.?
> If i remember correctly #12 said he can make a texas star 2 pill show big
> numbers on a bird meter

Which is fairly easy to do.

Clip the caps going from collector to ground, then remove ONE of the
negative feedback resistors.

Key up.

800 watt Texas Star.

Be sure that you can flip the power off to the amp, because half the time
the amplifier will not unkey, and will sit in oscillation until it destroys
itself.

  What size slugs were you using I have yet to see to
> many bird slugs that read identical to each other.

Then you have a bunch of people that like to juggle their slugs!

They are all calibrated in one of about 5 test units at the factory.

Hello, I know the Mirage 88 is all black, including the knobs...Does
anyone know if the Virage or Mirage 33 and 44 are all black too??Please
e-mail with info.
Thanks

THE KAPTAIN   SKIPMASTER 725

I like the AR-3500 series...

They where the best 10 meter rig to date...

I haven't had one of the new RF Limited radios on my bench, but from what I have heard through the grapevine, they are somewhat of a disappointment...

And I am sure that when you are backed up against the wall with fact, that
you cannot do a damn thing other than criticize someone.

Sorry, Jack, some of us have attempted to experiment, and we have found what
works well..... What works on my Suburban might and might not work for you.

However, like I said.... NEC modeling and proof-positive day to day use
have proven you wrong.

Wrong.

If you have the SWR flat, then the length of coax makes no difference whatsoever.

Oh bullshit.

Anyone of the people that I know of that goes to the 11 meter breaks have household incomes in excess of 50 thousand dollars a year.

Most are small +++ business owners, or work in highly respected trades.

Your views are the same as an asshole... Everyone has one, and it stinks.

Serves only to promote a myth that helps your bullshit argument, and is completely false.

Sorry you chose to live in a dreamworld, but that ain't the way the rest of the world works.

Now, let's compare price.

6 meter rig.....
11 meter rig

6 meter amplifier
11 meter amplifier

EME station
11 meter beam.

Gee... You can do the same.

Ever wonder why most amateur operators are college grads (4 years +), have 50K or more a year salary by themselves?

Because it is an elitist hobby, that's why.

I run an entire amateur station, and have all the toys to go with it, but seem to have more fun on 11 meters, rather than telling everyone I am running rig X, antenna Y and the weather here is ABC.

Toll Free

Please note: I do not accept unsolicited email or usenet posts from asshole RF police. If you are one of them, don't think that a rebuttal is your right, or that you can reserve that right, as it is not true. The comments reflected in this post are mine, and the majority of the CBers out their. If you disagree with me, keep it to yourself.

That disclaimer makes about as much sense as yours, eh?

If you don't know diddly about radio, go in this order...:

Screwdrivers Experts Guide to CB Radio
Understanding and Repairing CB Radio
ARRL Handbook for the Radio Amateur
Radio Handbook by William "Bill" Orr

If you know something about radio already, skip the Screwdrivers Experts guide.

Hope this helps... With the above listed references, you would know everything to design a radio, antenna system and linear from the ground up, all on paper.

I would not have an answer Phil, but will look again and respond if possible
no since in saying I know when I dont, I can tell you this though, with a
watergate listening 25 miles out, I notice with two guys tying on the
watergate barefooted, one guy can run a two pill doing a little more than
500 bird watts, the other running this 700 watt two pill, the guy running
the 700 watt two pill will win every time, swap amps and its just the
opposite, this test was done with more than one brand of competition amp

running against the hot two pill, it confused me too but the proof was in
the pudding.

I recently cought a major power surg in my basestation. It is now in the shop being repaired. I have a loaner from a friend. Problem is it came with no mic. I have 2 hand mics. The radio is a Uniden Pro 500 mobile radio on a power supply. The mics are.. Ranger 2950 stock hand mic, TRS Challenger hand mic.

Specs

Uniden Pro 500 is a 4 pin mic plug.

Ranger 2950 mic is a 6 wire mic
Shield, Red, Black, Yellow, Blue, White

TRS Challenger is 4 wire mic
Shield, Black, Red, Purple

Could anyone tell me the wiring for either mic to be used on the Uniden Pro 500

Ranger 2950
Pin1.
Pin2.
Pin3.
Pin4.

TRS Challenger
Pin1.
Pin2.
Pin3.
Pin4.

If anyone can help, I will be so greatfull.

BOP

     You said "I have seen 2x2879's swing a bird 43 forward to more
     than 700 bird watts at only 19 volts."  There are plenty of
     Bird 43s with peak-reading kits in them; that's why I posted
     what I did.  You have to specify average of peak when making
     claims like that just to avoid confusion.  Your later post
     where you outlined your test set-up in detail is the proper
     way to do it.  Over the years, on this newsgroup, there's
     been alot of confusion over numbers obtained with different
     test set-ups.  The more detail you can provide about your
     test set-up the more credible your claim becomes.

I am not sure about that reply but will see where this post goes. I am not about to give up my 2510 to one tech that says it is dead and he will hold on to it for parts?? I will do everything in my power to get it back up and running rather than leave it with a tech as a parts radio..... I LOVE my 2510......

> And with class c, get plenty of distortion.

The distortion created by running a zero-bias amp on AM is nothing compared to the distortion created by overmodulation. The original author already said that his radio keys 2 and swings 5. That tells me that the AMC circuit has been defeated and that the overmodulation distortion is already there and will be amplified by any amp he uses regardless of what class the amp is operating in.

If you want to crusade against distortion on the CB band, start by trying to convince everyone to restore the modulation limiter circuits in their radios. Once you've accomplished that, then you can go after non-linear amps.

Hmm.. I really doubt that what you guys are seeing are guys with multiple VALID callsigns. Most likely you are getting confused between individual and club callsigns. An individual can only have 1 US callsign at a time. This is tracked by SSN by the FCC. If they own a repeater, the repeater usually either has their callsign or a callsign of the club that sponsor's it, but that is not their callsign. It is also true that a club may have multiple callsigns for special events, like in Korea, the club I belonged to on base had a special event station everyyear with the boy scouts and the call for that event was HL9BSA. They had another for the club. A club callsign can not be used by an individual if they are not doing something with the club (like a contest or special event station).

And on the issue of "buying" callsigns - there is a "vanity callsign" system in place and I think it costs money, but again, you can only have 1 valid US callsign. Period. Anyone who has more than one must be into more illegal stuff, because they'd have to have more than 1 SSN... regular callsigns don't cost anything. The club you take the test with may charge for materials, but that is a nominal charge at best.

I hope that clears things up, and please, let's not have any more comments about "uneducated" people in the newsgroup just because they are unsure about multiple callsigns. These kind of comments are not productive and typically come from the hams I'd rather not be associated with, plus they give the opinion that all hams think that way, forming a type of discrimnation against us. Thank you.

The same antennas are used regardless of amp..generally 1/4 wave antennas which are just basically a straight hollow aluminum shaft about 1-1 1/2 inches in diameter and approx 6 feet tall with a tunable tip which makes up the remaining 2 feet,Go to Toll`s site at BigRadios.com and there are pics of keydown

vehicles...i`m getting my scanner hooked up today so if for some reason you
can`t access his site I`ll send you a pic of my van with my sticks on it

I hope I did`nt brain my damage.

The FCC's beef is that there are, say, 15 call signs with only one trustee.
That's way too many for one person to supervise--especially when they are
spread out across thousands of miles.

The other aspect is that the FCC is responding to complaints that a few
individuals have sucked up all the good vanity call signs so that these are no
longer available to the general population.

I would not drill any holes unless you know what you are doing. I put a ball mount in the center (almost) of the cab of myf250 and had nothing but problems with my swrs.It may be best to put the mount a little towards the front off the cab say 6to12" especially if you are going to use a topper(cap).I now use a 5 foot fiberglass whip off the mirror and get better results with the swrs then the ball mount.The location is very important and different in each aplicatiion and a few inches may make the difference. Just trying to save you from learning the hard way like i did.

Hey every one,

I have been reading in on this news group for sometime, just trying to get a feel for the group. I have noticed that there are a lot of well experienced people in this news group and I hope that some one could give me some good advice.

I have just started getting into CB's. I have researched a lot about it though. I am running a Connex 3300 peaked, with a top modulation arround 40-45 watts, along with a small amp at 125. I am transmitting on a Wilson 500 magnet mount anteana.

I am looking to get a set of meters so I can keep an eye on my SWR's and power output. I was conssidering the Paradynam PDC 600. Is this a good set of meters? Are they pretty acurate? I want something that will at least register 1000 watts. I know that I will upgrade to high linears in the future and I want a set of meters that I can use for a long while.

Any other suggests would be helpfull.

I was told that my CB radios were 11 meter radios, but I think I was ripped off... You see, all my CB radios only have 1 meter on them that says: S/RF, except for my Cobra 2000 that has 2 meters. Does this make it a 2 meter radio? I paid for 11 meters, and I only got 1, except the Cobra 2000. Those ham rigs that are 160 meters must have a HUGE front panel to mount all of those 160 meters on to.

Don't get a spectrum analyzer, unless you have lots of money to spend.

Neat toys, but for one ups? Have you PRICED a spectrum analyzer that works at 50MHz?

You can get a 'tunable' meter. What you're doing is just setting up the radio for minimum output at 54MHz. If you just put a 'tunable' filter in line, and then measure the RF on the output, that does the same thing, for a lot less money. In fact, you could just feed the output of a 54MHz tunable filter to you O scope and set it that way.

I hear that Chipped Lincolns may sometimes exhibit abnormal behavior after
the switch. I was wondering if anybody has seen this and if by any chance
this might manifest itself as an impedance or harmonics problem...

Thanks,

If you are worried about harmonics, just install or build a lowpass filter.

The spectrum analyser would be the best bet. However, you can use an oscilloscope if the unit has a half decent bandwidth (at least 25MHz). Key up the radio and crank up the sweep speed 'til you get a cycle or two per screen. The harmonics will the the fuzziness of wave form. The fuzzier it is, the more harmonics it has. Many 'scopes have a x10 magnification that'll make this fuzziness (if it is there) easier to see.
Tune your harmonic filter for minimum fuzzies! 8-D

Cheers!

Half the fun is talking on the radio . Thats why l talk on SSB and not on the chat rooms , anybody can do
that !

Newsgroups: rec.radio.cb

Howdy All:

Ok, before we begin I'll admit to being new to CB, but not necessarily new to mobile radio installations. I've always had Scanners in my trucks and got tired of simply "listening" to truckers going down the road and decided to start doing some "talking" of my own.

So, I read as much as I could on CB operation, many of the pitfalls and common FAQ, and took the plunge last week. However, I'm really disappointed in the performance and am not sure where to start to look for the problem. I thought I did my homework pretty well.

Anyway, that's why I'm hoping for some clues from you all...

The setup:

Radio: Brand New Cobra 75WXST. I chose this simply because of the small installation and convenient all-in-one design. Cobra also seemed to be pretty reliable as far as the brands go, so I didn't think much about it.

Antenna: Wilson 5-foot Silver Load & Valor "Quick Flip-Down" Mount

Coax: Firestik 18ft with Fire Ring

Mount: Firestik Stake Pocket Mount [mounts in those holes on the top of a pickup truck bed]. It's actually mid-length of the bed and not near cab nor the tail, on the driver's side.

OK...

I reasoned that with a tall truck and 5Ft antenna, secured tightly to the bed [which is mounted with bolts to the frame] I should get pretty decent radiation pattern, and the ground shouldn't be a problem.

I went with the 18ft coax, which barely makes it with all the length in an extended cab, 8ft bed truck, although I didn't like having to solder the pins and terminals on the wire. I figured Firestik would have done that, but no big deal -- I soldered the center pins and center strand of the coax securely.

I ran the power lead directly to the battery, and the ground to a local ground under the dash where a bunch of the dash components were grounded from the factory.

I used an external SWR meter from Radio Shack before I did anything, and tested my SWR. From the factory, the Wilson didn't have to be adjusted. I had an SWR of 1.3 on Channel 1 and an SWR of 1.4 on Channel 40. It was slightly less on Channel 19 or 20.

So, I figured...hot dog! I've got it set up right! =]

Then, I fired it up. Ack! All I can really pick up is a bunch of static! I have to set the Squelch "gate" to around 9DB or so to filter out everything but normal conversations. Even at that level, the signals are _VERY_ distorted to the point that you can't understand anybody really talking.

So I hit the "SoundTracker" button, and that seemed to make the "conversations" even more unintelligible, and didn't really do a thing for the static level. Heck, the scanner picks up the "conversations" and signals better than the CB does. I can understand those fine, and have about a 5mile range with only a 2ft scanner antenna.

Bummer.....

So, I started troubleshooting.

First, I removed the quick disconnect thinking that might be a poor connector between mount & antenna. Nope, still the same.

Then, I tried hooking up the "ground wire" or whatever it's called on the antenna directly to the mount. The Wilson directions note this should only be needed if you've got constantly high SWR, and that it will drop the "resonant frequency," but I thought what the heck. No change.

So, I swapped the antenna to the scanner antenna which is on the other side of the truck and connected via the same mount and same coax. Same results, so that seems to rule out bad coax, mount or ground [the scanner works like a champ].

I'm stumped.

Is this just that poor of a CB? Could the ground still be bad? How come the SoundTracker feature hardly does anything, or is this more of a "gimmick?"

Any suggestions or comments? Am I missing something?

Thanx for the help!

- Jay

your probelm isnt the radio its the skip level. during the day intereference
can be full scale on the meter on cahnnel 19 and other busy ones. this is what
killed the cb boom in the 70's and 80's. try listening at night and see if it
quite downs .

Guess I better get back on the porch with my 200MMX
and wimpy cable modem!

BTW, my little 2 pill DID talk on AM to a few places Sunday.
40 CH AM!

If you lamers can't DX from your mobile, give up!

Yes, I did say, "Unit 69, Chesapeake Bay!"

hey xforce , i know for a fact that what you say is barbara streisand and why is it these people who you are referring to , never get on this ng and brag about their stuff, well i think the answer is quite simple , they don't have to, so far i have been on here about a year and all i hear about is xforce this and xforce that , and what do i hear about dave made, nothing and i think i know why, perhaps he does his talking on the, shall we say as you guys refer to it, 'the killing fields'. so to you mr xforce , i have one thing to say , stick a pickle in it and shut up and quit being a party hack for the xforce punks, geez son get yourself a real job and maybe a life. you do know there are things outside of radio don't you , maybe like oooooohhhhhhhhhhhhh, chasing skirt. now that would be a most excellent improvement but perhaps a stretch for you good buddies. anyway, icm out...

I agree with that. Just a touch of echo on AM. Off for SSB. Be careful,
don't break that plastic mic key!

As a side note, the condenser element has a good bass response which
can overdrive some radios before the voice is loud. That's why I keep
a D-104 handy. Some radios are tinny and the Sadelta works great.

Try putting a Sadelta on a PC-122 some time and attempt to make it
sound good!

I just won an Eagle Sidewinder off of eBay. I've noticed that some of the power mics listed in Coppers catalog for the Eagle Sidewinder 6pin don't require a battery. If I use an Astatic 575 with this radio will I be able to use it without the 9 volt? Also, after reading responses from a past post I'm interested in buying a Shure 527 mic but can't seem to find a store that carries them. Anyone know who sells them? Thanks.

Toll I would certainly hope so perhaps along the lines of say 3-4 times more pep

>
> I have seen single 4CX250B amplifiers that where capable of WELL over 10
> Kilowatts output PEP, but didn't do much more than 500 watts average.

Ok Is it done with voice modulation? How wide is the pulse ? What is the duty Cycle?

>
> If you are going to quote Dennis, I suggest that you continue to quote him
> on everything he said, and not just what suites you.

I am not directly quoting him just said i thought I remember him saying he
could show you big watts out of a 2 pill TX Star . If i wanted I guess I
could research watt he said exactly, but it would be a waste of my time,
because i really don;t care.

>
> It is not hard to get higher Bird readings (average power output) without

That is true for many Cobra 148's some do 20 watts rms, but the peak watts
arent there compared to the 8-9 bird out of the 29 and 40-50 wattts pep. Ill
bet more people use the radio that creates the highest pep the 29 compared
to the 148's higher rms figure in a keydown situation. Toll let me ask you
this which do you think would be louder for arguements sake lets use the 2
pill example they both do 1500 watts pep yours hold 700 rms mine holds 500
rms, again the peak values are the same. I am not asking whos puts out the
heavier signal but the apparent loudness which of the 2 will be heard or
will they both sound equal?

I am sure the way slugs are handled by people they go out of cal, but the
point remains you can order 5- 1000 watt slugs and check them all against
each other and have very different readings, the same goes for the reflect
null of the slug I have seen far to many vary from slug to slug. take care
toll

Is this a decent radio?

I like the channel scan feature.
Hard decision between that and the RCI-2950.

you
> order through dave made.....
```

I know a guy who ordered a Harley , he got it one year later, yes he could
have went down and bought a Honda but he waitied and is tickled pink and
would do it again.

>well if you are lucky and your calls are not ignored you might get it in 3
to 4 weeks.......

I guess selling illegal amps should be real easy to get, sell it to anyone
that wants one, hey maybe a drive up window .....Where ever you guys are
heading dave has already been there, and done that, I remember when he used
to work 16-20 hours every day on this shit like you guys are doing, He has
moved on to bigger and better things you have given him the greatest
compliment already by using his design, and him taking 123 under his wing
and tutoring him has also been a success story for him, remember you can't
be first but you can be next. if it wasnt for 123 coming to davemade you
guys will still be selling the pirate, and Tx Star line.

and what happens when the box
> blows due to user error or a part fails (it happens) and you send it back
to
> dave........wow another 3 to 4 weeks......dont get mad at dave or anyone
who
> works for him you must have sympathy for them.....it takes time to fill
orders

If the mic needs a battery.....the mic needs a battery. You might e-mail
advanspec@aol.com  about the Shure mic. He was a dealer for them when I
bought my 526T from him a few years ago. Tell John Train sent you and he'll
treat you right!
He can also set you up with a 575M6 for that thing if that is what you would
like for a hand mic

I have for sale a 98% complete set of original SAMS Photofact CB Series manuals from #1 to #292 in excellent condition. Missing numbers are: 108, 152, 208, 212, 216, 221, 225, 230, 236, 244, 259, 264, 270, 271, 273, 274, 281, 284, 286, 289-291.
Price is $750.00 for the set (I will not divide), and I will pay shipping to anywhere in the U.S. Thats less than $2.50 a book (thats less than repro costs), and thats IF you can find them. The price is firm. If interested, I can be contacted at:
usmc@pcisys.net

Thanks

Paul

Echo mics, or any other type of echo-generated signal SUCK !!! Especially
on sideband. So, 86 the stupid echo, and get a REAL microphone. I't all
about AUDIO. Spend your money on a good D-104, or even a Sadelta microphone.
And if you run a REAL sideband base station, the Shure 444 is hard to beat.
All that echo and roger beep stuff, only makes your station sound terrible.
'Nuff said... from a 26 year sidebander.

MIKE (707) Just MY opinion, I could be wrong.

I am selling 61 assorted sweep tubes (list below).

I recently purchased a garage full of parts from a retired TV & radio repairman. I�m an audio guy and I don�t use sweep tubes, so I�d like to sell them off. I was told by the seller that some were new, some were used, but he wasn�t sure which were which, and most weren�t even in their original cartons (some were loose). I have checked all of these tubes on a B&K 667, and have verified that all of the tubes listed below test LIKE NEW, have no grid emission/gas/leakage, and have no shorts. I have also re-boxed the loose tubes. (I rejected any questionable tubes during testing). During my testing, I made some judgements regarding the physical appearance of the tubes. The �rating system� that I used below ranges from �NEW-VG-GOOD-USED�. The tubes marked �USED� may have discolored glass or significantly burned getters, but they STILL test �like new�.

MAKE ME AN OFFER, I�m a motivated seller!!! Offers to buy the entire lot will be considered first, but I MIGHT consider breaking this lot up.

(FYI, if these tubes were purchased as NOS from that tube-selling place in Arizona, the cost would be over $1600...not that I�m expecting to actually GET that much.)

Interested buyers, please respond by email.

Regards,
Tom Mitchell

you really dont know what goes on in the industry......go read a book!

i was referring to the actual amount of people who are still working under daves guidence........and so far it seems that the crew is getting smaller......this would make for a real bad situation "if" orders were to come in......just how long do you think it takes to build ...lets say an 8 pil........or wait cant have one of those without the driver so you need a 3 pill with that..... so if thats all you had for orders for 2 days i guess it would be rather simple to build and have delivered the finished and tested product within 2 weeks time......but is it reality for this to happen when you order through dave made......well if you are lucky and your calls are not ignored you might get it in 3 to 4 weeks.......and what happens when the box blows due to user error or a part fails (it happens) and you send it back to dave........wow another 3 to 4 weeks......dont get mad at dave or anyone who works for him you must have sympathy for them.....it takes time to fill orders when you are understaffed....so please be patient when ordering from dave or get quick results from well you know who...................X Force!......goooooo team! by the way i am not wearing any underwear under my skirt today.

>there are many people still loyal to the davemade crew don't let the head x

yea, same type as the Washington, single conversion...   always wondered

why they done that. it wouldn't have cost much more to put a better receiver
in the thing....

Screw linears. Just do what seasoned old-timers do...turn up the mic gain on
the radio and the mic all the way and scream. Get those meters swingin' y'all !
Intelligibility means nothing...Feedback thru your houses light bulbs is
everything ! Impress your friends and neighbors...make your cars brake lights
dim and flicker when you modulate !      :)

the only complaints I've had on the Delta Force units is the
anl/nb....truckers say its a noisy rig.

Well, you are intitled to your opinion. I have a Sadelta ME3 ECHO power mic and the audio is just as clear as the D104 I have. What sounds like shit is when people turn the echo all the way up. The best setting is between 3 and 4 on the echo dial. This way there is just a slight echo accent and you still have that crystal clear audio.

Hello, I've got one of these and am having trouble finding out
why there is no mod. good carrier on a\m, no carrier on usb\lsb
(which I know is correct), good receive. I've tried various trc mics so
I don't think its a mic prob. Any one have any ideas as to where to
start looking?

Thanks, Jeff

>

Actually there is a BIG difference between ham and CB where interference
is concerned. A ham is legally allowed to run a "linear", whereas a CBer
is not. If a ham is causing interference, the worst thing that can
happen to him is the FCC can impose "quiet hours" if the case is extreme
(And that usually only happens when the ham is a hard nose, and refuses
to compromise). Usually, if the ham can demonstrate good engineering
practice, in the design of his station, and proper filtering and
grounding is employed, then there isn't much left to do on his end. The
problem is with the receiving device (Which is true the majority of the
time). And this is where the pissing contest starts. Who's rights have
priority over each other and so on.

The same conditions can be applied to a CBer as well, the difference being that a CBer has to be 100% legal, if he expects to "win" any case. The other thing is that that ham license entitles a ham to the operating privileges granted by the federal government (which supercedes any state or local govt). A CBer has no license, and could be held to an existing local statude such as a "public nuisance" or "disturbing the peace" clause. A ham has a certain "right" to construct and operate a radio station, which can and does help defend against any civil charges.

I know a local CBer that was taken to court over his CB interference, and was found guilty of "disturbing the peace" and had to pay a fine of $300. The neighbor had tape recordings of the interference, and it didn't help that the CBer was heard swearing on the tape.

One could say that he didn't have a good lawyer. But could you justify paying lawyer's fees to fight a $300 fine? Other than for the principle, it doesn't make financial sense.

To your original point, it is much safer for a CBer to run power from the mobile. That way you never interfere with the same people for very long.

Dave

I agree. Many unscrupulous "techs" will tell you that a particular radio
is "fried", and then offer to "take it off your hands", as a courtesy.
The real deal is usually a simple fix (like a bad voltage regulator),
and the "tech" will fix it later and will either add the "parts rig" to
his personal collection, or sell it for a big profit, since the 2510's
are scarce, and many people want them.

I'll bet that the micro is not bad on the radio, and the real fix is
something much simpler.

Yep....actually when I calibrate it on the low power setting it's
impossible to turn the knob far enough to actually calibrate it
correctly......guess that's why it's like that....nevermind....I
understand now..

Well...

Your license is a STATION license, with OPERATOR privlidges.

You can still technically apply for multiple licenses for multiple locations, although if you do that, the FCC frowns on that. The problem was the FCC 'technically' allows individuals to file for all kinds of groups and club licenses. What happend was when the database was checked, they found individuals with many more than they could ever use. One guy had 23 separate calls! The FCC has started procedures against the individual to revoke all the extras.

But that's just the extreme. I did a check of licenses in my area, and found "The xxxxx Family Radio Club" for one individual near me, and his 'good buddy' just had to follow suit and got a license for the name of his street. Will that pass FCC muster? Probably, as it is just one extra license.

One issue here is that like I said, a HAM license is a STATION license. If there are multiple HAMs in a household, LEGALLY there is still only one single call for the house. It's the STATION. But there is always a way around that. Like if I'm in a friends car, I LEGALLY have to sign with his call sign. The ONLY time I legally can use my sign is if I am a higher class license than him, and if I am CURRENTLY operating in an area where my privlidges are valid and his aren't, then I have to sign both. But realistically would I sign his call or my call on 2M for example? Well, if I 'borrow' his car, aren't I also 'borrowing' his equipment? Isn't that technically making the station 'mine' for accountabilty?

So it's not all cut and dried. And yes, there are lid HAMs who abuse the system. Some more than others. But I wouldn't call having a 'second' call for a make believe club fraudlent or abuse, just a little bit of immaturity and taking advantage of the letter of the law kind of thing.

Mike

Trade even up: Viking Valiant 1 for Hallicrafters SR-150 or 400 with power supply/speaker, in like condition.

Freshly tubed, solid state modules in place of 846's. Front panel is exceptionally
nice; nearly mint. A few scratches and minor knicks on the upper lip.
Only draw back, someone widened out the right hand manual/ptt
switch hole. An on/off flange hides the flaw nicely. All knobs and inserts intact and like new. Crystal knob cover is there. Lettering perfect. VFO is beautiful.
The maroon cabinet has been painted, not a perfect job, but not bad.
Has a transmit-receive relay built in.

Let me know what you have!

Regards,

Cary Fries

Do you need the channel selector or the channel eprom? I have some original
40 channel eproms if that is what you need.

I relatively new to CB but I'll give you my two cents. I bought a 79-290
to replace my Cobra 148 GTL (it's going in the house as a makeshift
base). I've had it about 1 week now. Pluses are the mod was really clean
and easy. Short two pads and pickup 200 freeband channels and 10 meter.
The radio has a good number of features. SSB tunes easily with the

coarse and fine clarifier controls. I'm driving a linear, so I don't know what the dual finals peak at. Freq counter works across the board, dual watch works well. Things to be aware of:
1. I believe Midland's site and Bill's 2 way state the radio has rf gain control. This is not entirely true. There is the LOC/DX switch and that is all.
2. Channel selector works kinda squirrelly. Twisting pressure applied to knob will change the channel prior to it clicking. Thus quite often, when you turn the knob one click you change channels twice. I've heard of an export version of this radio which uses up/down buttons instead of a rotating selector, this might be a symptom of that option internally.
3. 10 meter or 240 expanded mode are selected by holding buttons during power up. You lose all memory presets when switching from one mode to another.
4. Comparing the rx quality from the Cobra to Midland, I am a bit disappointed in the recieve. It is somewhat noisy. However, I installed this radio coincidental to the increase sunspot activity ~1 week ago. This accounts for some of the noise. I haven't run my Cobra since I need to fire it up and compare the two side by side. I'll reserve judgement until then.

Overrall, I'm pretty happy with the radio considering features vs. price. I'll run this one until I can get the President Lincoln. I have documentation for all the mods. Let me know if you need any info. But I recommend ordering from Bill's 2 way and he supplies the mod info with the radio. Run your power lead all the way to the (fused at) battery to minimize engine noise.

> What?
>
> You can EASILY get more power PEP than you can average.

Toll I would certainly hope so perhaps along the lines of say 3-4 times more pep

>>>>But, that is not what was being talked about before...

>>>What was being talked about before was having the PEP value to back up the claim of 700 watts Bird.... And that wasn't there... The 2 pill wasn't doing anywhere near 2100 watts PEP.

>>>My statement was to say that you don't <<necessarily>> have to have the PEP / AVG relationship textbook correct to have the claims be true.

>
> I have seen single 4CX250B amplifiers that where capable of WELL over 10
> Kilowatts output PEP, but didn't do much more than 500 watts average.

Ok Is it done with voice modulation? How wide is the pulse ? What is the duty Cycle?

>>>Yes, it can be done with voice modulation. You use a switching power supply (I know you guys know about those) and pulse the grid / screen and anode of the tube. This keeps the total average power down, but will still allow for higher than normally capable output powers.

>>>The downside is that you must use a Hi-Q tank circuit so the flywheel effect will have enough to complete the sinewave. Hi-Q translates into expensive.

>
> If you are going to quote Dennis, I suggest that you continue to quote him
> on everything he said, and not just what suites you.

I am not directly quoting him just said i thought I remember him saying he could show you big watts out of a 2 pill TX Star . If i wanted I guess I could research watt he said exactly, but it would be a waste of my time, because i really don;t care.

>>>>What he said exactly is what I stated above, and what has been commonly known in the CB tech circles for quite a while.

>>>The other "trick" was to put 2879s into MRF 455 amps and not change the turns ratio or caps on the output.

>>>This would make a nice 800 watt PEP amplifier.

>>>Lasted about as long as you would with Christy Brinkley! ;-) But, it would get the customer to love you. The unscrupulous techs could always blame the unstable amps failure on the user, then charge them again to mod the amp back to stock!

>
> It is not hard to get higher Bird readings (average power output) without
> the corresponding PEP readings.. Most all of the MB8719 chassis radios that
> I do will do nearly 9 or so watts Bird, but will not do much more than
> 12watts PEP....
>
> So, that somewhat blows your argument out of the water.

That is true for many Cobra 148's some do 20 watts rms, but the peak watts arent there compared to the 8-9 bird out of the 29 and 40-50 wattts pep.

>>>No, there not. That is exactly what I said.

Ill bet more people use the radio that creates the highest pep the 29 compared to the 148's higher rms figure in a keydown situation.

>>>Down in the south, that is starting to change. People have been listening, and the 148 is starting to make a comeback.

>>>If they just went for the highest output on the Dosy, then EVERYONE would run a galaxy with a pair of 497s in it... That would give you 100 or so watts PEP output!

Toll let me ask you this which do you think would be louder for arguements sake lets use the 2 pill example they both do 1500 watts pep yours hold 700 rms mine holds 500 rms,

>>>Simple. You have not provided enough information to base this on.

>>>You would also have to know the carrier values involved, as the "loudness" of an AM transmitter is based upon the difference in carrier to modulated power output.

>>>If you took your and keyed it at 700 watts, and backswung to 500, but where doing 1500 PEP, you would have 800 watts of modulation.

>>>However, if you ran a station like me, and had the carrier near the 300
watt level, you would have 1200 watts of moduation.

>>>Which one is louder now?

>>>Now, back yours down to 100 watts of carrier, forward swinging to 500,
and it would be a toss-up, although I would put my money on the 300 swinging
to 700, as the AVG power shift is the same, the PEP is the same, but the
TOTAL aggregate power is higher on the 700 watt signal.

>>>If you don't believe that, ask Chill next time you are on the phone with
him how my Suburban sounds... Or #6 in your neck of the woods.

again the peak values are the same. I am not asking whos puts out the
heavier signal but the apparent loudness which of the 2 will be heard or
will they both sound equal?

>>>See above.

I am sure the way slugs are handled by people they go out of cal, but the point remains you can order 5- 1000 watt slugs and check them all against each other and have very different readings, the same goes for the reflect null of the slug I have seen far to many vary from slug to slug. take care
toll

Yes, you are right, but the tolerance is still there... +/- 10%.

You too, CM..

Jeff,

Its sounds like either the modulation section is blown or your mic is bad. Maybe a bad wire in the mic wiring, or internally in the radio. Check for cold solder joints in the radio, and also do a continuity check of the mic wiring with a multimeter. If known of this works find a known good mic, and test it that way. If the is a Mic gain, or dynamic Crank it Up. Make sure its working. also if its got these type adjustments check to see if there is a dirty Potentiometer. I know I speeled that wrong!

And if all else fails try a technician in your local area. If there nothing wrong he shouldn't charge.

Good luck

I don't know about all that but I have a dead Lincoln that I'm tired of
working on I'll sell for $50.00, and I have a working HR2510 that I'd love
to sell for $199.99, slightly used but it already does all the
channels..........e-mail me, exports@exportradios.com

I agree with what Robert said. It is a good radio but has some quarks. I have been running one for about a year and have been pleased with it. One thing to look for is I hit the face release button by accident when the unit was on and the brain went berserk. (It is to close to the band select button) In about 2 days it started to change channels by it self and lose the memory. If you remove the face plate and look at the back you will see rows of contacts. 2 of them say "short if errors exist" or something like that. I did just that and all has been well. I also agree with using Bills. I have had good luck with them and they sent the mod sheets along with it.

See ya in DX land

There's a big gap between the "Screwdriver Expert's Guide" and
"Understanding and Repairing CB Radios." If you're at that level
I recommend the CB Tricks series too. Even the Thomas Publishing
books can be useful at that level. Don't underestimate the value
of the beginner books; they form the foundation for you interest
in high performance CB.

well gee golly, i'm suprised all those foul mouths on 14313 would let you talk on there band. whats wrong with 40? are the the short wave stations hurting your ear?   i was right here on 11 working europe and africa with a cheap radio and a antron 99 making real friends not just meaningless bullshit like the hams. try listening on 26285 usb or 27555 usb in the mornings and afternoons. youll hear so many different countires it may make you want to give up those old ham bands. i have 112 countries confirmed, sinlge mode, single band right here on 11 meter ssb and all thats qrp with the confirmations direct from the country and not via beuros or qsl managers(that was last cycle). the idea that real dxing cant be done on 11 is a joke. hams are always being heard praising the great dx on 10 meters but 11 opens early and closes later with stronger signals than 10.

>

i use my mfj dsp filter and it seems to work well for the smae purpose, and by
the way. a lot more people than you think are using better rigs than yours on
11

>   Sorry to hear you need so much power.
>
>   I'm a qrp op and currently trying for a five-band dxcc at 5
>Watts or less. Don't even _own_ an amp--and don't have any need for one.

my 2510 is doing 25 watts. thats too much power? please remember i'm just using
a half wave vertical

>   BTW, I can not only earn my five-band dxcc, I can safely state
>that I work dx _publicly_ (or in a letter to the FCC if I want to) and
>not worry about someone confiscating my radio and fining me for doing
>it.

>   Can you?

yes i can and yes i do.

>>try listening on 26285 usb or 27555 usb in the mornings and afternoons.
>
>   I have.
>
>   It don't hold a candle to the _average_ traffic on 20
>meters--and that's not just limited to mornings and afternoons.

thats right. we dont have a contest or net thats occupying every other freq

>>i have 112 countries confirmed, sinlge mode, single band right
>>here on 11 meter ssb and all thats qrp with the confirmations direct from
>the
>>country and not via beuros or qsl managers(that was last cycle).
>
>   I thought you just said you run an amp.
>
>   qrp is 5 Watts and below. Are you _sure_ that's what you meant?

no where in my earlier post did i say anything about a amp. i use a hr2510 at
25 watts and a antron 99. learn to read better before making dumb ass comments

>>the idea that real dxing cant be done on 11 is a joke. hams are always being
>heard praising
>>the great dx on 10 meters but 11 opens early and closes later with stronger
>>signals than 10.
>
>   Of course it does. The lower the frequency the greater the dx
>opportunities. That's why most hams use 20 meters for dx instead of 10
>meters which is only good during the peak of the cycles.

guess what? right now we happen to be in or near that peak and the world wide
openings on 11 meters are fantastic everyday.

>   I just checked the current status on a dx packet cluster and
>there are currently 6 active dx stations on 20 meters that have been
>reported in the last 15 minutes. It is now 0224 UTC (10:24 EST). That
>counts _only_ stations outside the US. Want to count the ones on 11
>meters right now?

even though its not widely used go check out http://www.wwdx.com/cluster and it
has some good spots. as we get more organized on the net it will pick up.

>   Seriously, I have no problem with freebanders at all. Those of
>you who operate clean freeband stations (and who don't use the bottom
>end of 10 meters, as some do) are bothering no one and if you choose to
>violate the rules a bit in doing so, it isn't any of my business.
>

the freebands are what ham radio was supposed to be. its not a collection of rich old geezer wanting everything to stay the same. your just as likely to run across a kid in brazil as a business man in russia on 11. the ham bands arent like the old days. theres no new life because nobody is friendly and no new comers are welcome to the well established clicks.

>   On the other hand, my original response wasn't to a freebander's
>post but to one by a CB'er who was bragging about his _power_. That
>_does_ violate the rights of others (the CB'ers who are jammed or
>overpowered by his signal and can't enjoy equal use of the frequencies).
>There's a world of difference between a clean freeband station and a
>"MOD-U-LA-TION" CB'er whose only goal is to show off how much power he
>can pump out from their amps or how obnoxious they can be.
>
>   Rick

you can say what you want about the dummies and there dirty linears here on 11 but i can say the same about the super big stations i hear booming in on 80 and 160 at nights and all the others during the day. whether you like it or admitt it or not people are breaking the laws and acting like asses on all the bands. i wont even get into all the problems vhf has had with bad operators.

ps yes i still have 112 countries on 11 meters with qsl's direct from the countires to prove it. 25 watts and a simple vertical. not even a amplified mike to help and i even know code but i have no desire to be a ham. i'm afraid i might get that hollier than though shitty ass attitude you and others have. follow the links on my signature and find out a little of what truely goes on before you open your mouth.

what in that comment makes it so obvious i know nothing? as a life long shortwave listener and general radio hobbiest i know a little. are you denying that 14313 is full of ass holes cussing during the day or are you denying the fact that 40 meters is full of annoying ass shortwave stations or are you denying both???

WHO PRECUTS YOUR HEATSINK?
HOW MUCH DO YOU PAY?
THERE IS MORE TO IT THAN CUTTING AND SOLDERING PARTS ON A BOARD. AND IF YOU ARE BUSY WITH MANY ORDERS THERE IS NO TIME TO PREP FOR THE WORKLOAD. IT IS NICE TO HAVE SOME FREETIME TO PREP BUT BY THE TIME YOU PRESS 200 TRANSFORMERS THEY ARE GONE OR NEED TO BE USED RIGHT AWAY.

I am not sure if you have any experience in building mass amounts of competition boxes but it takes time and a little bit of skill. Maybe one day you will find out exactly how long it takes to build from scratch.

>Got a 5-pill in 4 days

happy for you

> Grab a solder iron and fix it

not all users of amplifiers have the knowledge or even know where to begin when a problem occurs with the amp they are useing. so dont give me this kinda lame ass remark.

> Yeah its easy to have quick service when you got 50 amps sitting there on
>the
>shelf cause you`re only selling 3 a week

3 a week thats a good one.
50 on the shelf?
cant even get them on the shelf.
they go right from the test bench to the shipping dept then boxed labled and shipped. Another one with assumptions i see.

I used to have a little box for checking this. You adjusted it for full scale reading. Then threw a switch to measure the second harmonic energy. It was set up for CB band. A friend who was a retired engineer for GE gave me the plans and it was real easy to build, unfortunately I no longer have the box or the plans.

you probably dont want weather. its pretty useless. cobra or uniden is the way to go for sure. you might want to just go right into a 148GTL or a uniden GrantXL. they both have A.M. and SSB(single sideband). sideband is kind of a nice thing to have. you can talk i little farther on sideband. especially when its quiet. with the 148 or the grant the only thing to really upgrade is the antenna. you can also do some pretty cool modifications to either radio. like channel expansions and power and modulation increases. i think you would be pretty happy with either 73's!!!..937--snowman---chicago

Er...Rick...an Antron 99 is an antenna, not an amp. It's a 1/2-wave vertical collinear array that covers 10, 11, and 12 meters without a tuner. Made by Solarcon. Cost about $40, or $70 if you order it with the radial kit.

73 and good DX'ing,

>my 2510 is doing 25 watts. thats too much power? please remember i'm just using
>a half wave vertical

Ummm...yeah, it is. The maximum legal limit on CB is 4 watts AM or 12 watts PEP sideband. Furthermore, the 2510 is a ham rig modified to work in the CB band, is not type-accepted for CB use, and is therefore illegal to operate in the CB band.

>try listening on 26285 usb or 27555 usb in the mornings and afternoons.

Didn't you just tell Rick to learn how to read? I suggest you do the same...learn to read Part 95, where you'll learn it is illegal for you to operate on those frequencies, or for that matter, anywhere else except the 40 frequencies or channels specified in Part 95.

>the freebands are what ham radio was supposed to be. its not a collection of

A bunch of unlicensed, undisciplined morons operating illegal equipment on unauthorized frequencies? No, that's not at all what ham radio is or ever was about. Try again.

>ps yes i still have 112 countries on 11 meters with qsl's direct from the
>countires to prove it.

Yeah, and every single one of them is illegal under Part 95...so are we supposed to be impressed by your ability to ignore the regulations, or your stupidity in publicly flaunting the fact that you do so, or both? Either way, I'm not the slightest bit impressed.

the scanner has lower sensitivity and you do not hear the nose level
and some scanner atomically lower sensitivity when a band is extremely nosey
so you will not hear the general back ground noise
so the people you hear in the noise on the cb you will not even hear on
the scanner so just crank up the squelch till only the strong and readable
ones come in
and if some one near by is still extremely distorted then get a used cb
some place or barrow one off of a friend
or go to a cb store and ask if they could drag an old used one out to the
truck to see how it works and and if one of the above works fine then
go to the place you got the cobra and tell them you want the defective junk
replaced
some times stuff comes out of the box bad

For harmonics you need a spectrum analyzer.

If you need one, I have a 1 GHz unit for sale.
$500.

If there was a NG called rec.radio.lowlifes, I'd have definitely
posted it there, to make absolutely certain you'd read it. I'm sure
you'd be a charter member of that group.

I have a friend with a Chipswitched HR-2600; it freaks out
every now and then. When it freaks out you have to reset
the CPU (Chipswitch) and start over. I have no explanation
for why.

The two nitwits who brought up the subject in the first place wouldn't
know JOTA from JSTARS. Check back and you'll see that neither of them
uses any callsign at all, because they haven't earned any yet. They're
just two losers who are whining because they have ZERO callsigns.

It's a good CB. Plusses are easy modification
wide range use and low price. Minuses are noisy
receiver and limited features.

I find they're good for one other thing, too. As soon as you hear an
echo mike on the air, you automatically know that the person talking
into it is an idiot. They may as well key up and play a tape recording
that says over and over again, "I am a moron. Please ignore this
transmission." This is nice because you don't have to waste your time
talking to that person to find that out the hard way that they aren't
worth talking to.

On the Channel changing of the 79-290 Midland. The selection works on pulses instead of the traditional Channel Selector you might find in the less technically advanced radio such as the cobra and uniden. This accounts for the delay in the channel changing taking two turns to get it. It is an off/on pulse switch. Hope that clears that up. It is not a radio defect. The Northstar radio's work in a similar way.

Debbie

Subject: The FCC has spoken

Well I finally got a reply form the FCC they are looking into illegal operation on 10 and 11 meter.

>>>Gee, guess you are too stupid to realize that you got a form letter, eh?

>>>People all the time are getting a response from them.... Guess that means that Clinton WILL be impeached, too, eh?

As some of you know I have been collecting email address replies to emails and URLs of sites and people who either sell illegal amps and or illegal mods for cb radios.

>>>Great. So, you are like the traffic cop that got beat up as a child. You sit aimlessly and snitch on other people.

>>>I hope that your children are treated the same way, as are you.

I have tried to tell you that the FCC is going start enforcing the rules on 11 meters as well as the ham bands but all I have gotten is insults and flames so the time is coming

>>>Yeah!!! Your such a man! You have become a successful snitch... Bitch... Well, those are one in the same, ya know!

I suggest if I emailed you about illegal info or illegal equipment you were selling that you straighten up quickly because as soon as I can get this information in a neat form I'm sending it to the FCC.

>>>Go ahead and send them my name. You will notice that I don't sell a goddamned thing, and you will quickly be made a fool of because you are now taking this personal.

>>>Would you like my call sign, as well?

>>>Also, I notice that you don't reply to your email.

>>>Your nothing but an asshole. Beat up on the airwaves, got your lunch money stolen from you, wife hates you, sleepin with a trucker asshole.

Go climb back in your little hovel and quit whining, because nobody here cares.

Toll Free

I said that.
I don't sell linears
Somehow you have me confused with someone who actually gives a flying fuck about you, your insignificant little lift, and your personal vendetta against CB radio.

Ya little Crack!

Have A Nice Day
Rick Bullon

Hi. Yes, I'd like to have the e mail addresses. We are looking at this
whole
problem. thanks

>>> "Rick Bullon" <kc5ajx@unicomp.net> 10/18 8:14 PM >>>
Hello
I 'm sure than someone else than Mr Hollingsworth is reading this and I thank you for taking time out of you busy schedule.
I read in the ARRL newsletter Vol 18 Number 37 dated Sept 17 1999 that Mr hollingsworth while addressing a forum at the Shelby Hamfest in N C stated that the next area that the FCC is going to try to clean up is illegal CBers on Ten meters.
I have started tracking down a few sites on the internet that post illegal

mods and /or sell linear amps. I have emailed a few stating that the info or items on their site was illegal and that the FCC was looking into illegal ops and amps on ten and the internet.

Well as you can guess the replies (of the few I received) ranged from KISS MY A**!! to "the information on my site is for informative purposes only and should not be used to violate FCC regulations"

My question is .... Is the FCC interested in websites that promote modifying CB radios for 10 meter operation and/or sites that sell amps for 10/11 meters? Also is disclaimer these guys are using legal or just a smoke screen??

I still have copies of the the email replies I received if your office is interested in that can of info

If I can do anything to provide leads or any orther info to your office please let me know. Also if I'm being a pain let me know that too HI HI

How can you talk about dobbing people in for illegal communications and programs when you yourself might be involved in illegal and/or stolen programs or cracks for programs that you might or might not have borrowed. Oh and if anyone is thinking of sending Mr dobber a hacked program or virus, be aware he also seems to be good at firewalls.

Today is a great day for a new start. You may look as though you're wearing a halo, and you may feel angelic. Enjoy the feeling of having the world in the palm of your hand. Just remember where you shit. Others will remember were you don't, and in the end if you have been shiting in someone else's woods then

carma will eventually get you.
Freedom of speech is something that a lot of people take for granted. Use it carefully and love they neighbour. Don't be a greedy person and keep all that knowledge to yourself.

The TRC 448 was an oddball of a radio. If I remember right (I had one years ago), there is an 8 pin mic preamp IC that was prone to failure, and difficult to find a replacement for. I had to "adapt" a standard op amp, and make some circuit changes to get mine working again.

If you can determine that the mike itslf, is not bad, then I'd say
chances are good that the mic preamp IC is bad....

>From my experiences, that Sadelta mike just does not sound good, even
with the echo off. The problem is that the mic itself is too "bassy",
and makes the operator "muffled" sounding. There have been some brave
experimenters that have made some "modifications", to change the audio
response, and can get them to sound decent. But out of the box, they
just don't seem to mate well with most radios.

I usually agree after one caveat. If you talk to them and explain the
error of their ways and they understand and accept your advice and make
the necessary changes to sound acceptable, then they can be saved. If
they get all defensive, and blast you with filthy language (Most of
which will be unintellegeble due to the over-echo), and a barrage of
noise toys, then they solidly fall into the "idiot" catergory.

This is so pathetic. Another GI JOE wanna-be that thinks he received a Superman cape with his Ham license. You should listen to the QSO's up around where I live. These guys are actually standing in line, making pests out of themselves at out State police headquarters because they want to be the ones who single handedly rid the country of this nasty CB plague.

When you ask each of them what they are personally doing about stopping kids from getting their hands on illegal drugs, the airwaves become silent...................

the problem was a few individuals holding multiple club callsigns when there actually were no clubs. you can water down the issue with more personal insults if you want but then that shows you intelligence or lack of.

I called a local repair\dealer out my way and asked about the 9001. He said the same as other poster that the radio is pretty much the same as the 5010. With the exception of the finals being readily available. He also mentioned that the 9001 has superior rf shielding for the cpu which apparently the 2950 lacks. His opinion is that the 9001 is a better built radio than the 2510,2950,lincoln. No doubt some will dis agree, but this is "his" opinion from his experience from the repair side of things.

2 men are in a Dr.'s office. Each of them are to get a vasectomy.. The nurse comes into the room & tells both men "Strip & put on these gowns before going in to see the Dr. to have your procedures done." A few minutes later she returns & reaches into one mans gown & proceeds to fondle & ultimately begins to masturbate him. Shockedf as he was, he asks, "Why are you doing that?" To which she replies "We have to vacate the sperm from your system to have a clean procedure." The man not wanting to be a problem & enjoying it, allows her to complete her task. After she is through, she proceeds to the next man, but then drops to her knees & proceeds to give him oral sex. The first man seeing this, quickly responds, "Hey! Why is it that I get masturbated & he gets a blowjob?" The nurse simply replies, "That is the difference between an HMO & Complete Coverage.

OK, here's the situation: I have a stock Malaysian made 148 GTL which I purchased new about two years ago for $175.00. The radio has been used very little since I bought it, and was just aligned yesterday. However, recently my 148 GTL was dropped on its faceplate from a height of about 4 feet (ouch!), which resulted in the knob shafts for the dynamike control and the volume/squelch control being bent to the point where these controls are almost unusable. My question is: would it be worth the money to have the knob shafts on my 148 replaced, or would I be better off buying a new radio like a Grant XL or a PC 122? It's been a long time since I've had a radio serviced, so I don't have a real good idea of what the average rate for labor is these days, although most shops on the net seem to charge about $45/hour for SSB radio

repair plus parts cost.
Any help/advice would be greatly appreciated.

Thanks and 73,
David

MIke,

I take exception. The person who is the control operator must sign. That means that if you're borrowing the radio/car/station and you are the control operator (ie, the owner of the equipment is not around) then you must sign. You may LEGALLY sign with only your own call, or you may PROPERLY sign with owner's sign, a slash/break and then your own call. The first method satisfies legal requirements concerning operator identification. The second method will protect you if you are accused of operating with excessive spurious radiations at such and such time, you can point out that you were operating the station at that time, but that it was not your equipment, and that you had no reason to believe it was "dirty." Not much of a defense, but the FCC may look more kindly on you. By the way, little room for argument here, it's a test question on the Advanced exam.

>So it's not all cut and dried. And yes, there are lid HAMs who abuse
>the system. Some more than others. But I wouldn't call having a
>'second' call for a make believe club fraudlent or abuse, just a
>little bit of immaturity and taking advantage of the letter of the law
>kind of thing.

Actually, unless there is a valid club or special event station, I see it as being abuse. There are few enough calls to go around, we don't need one person using multiple calls. In this region, you're stuck with a 2x3 call until you hit Advanced class, and even then the Extras are all 2x2 instead of 1x2 or 2x1 calls. It doesn't help when someone is holding multiple calls of ANY licence class...

Hmm, the TRC-448 was the 'different' radio in the RS lineup. All the
others were Uniden uPD858 based. That one was I thing GRE and
I forget the PLL number. But the common element here is no audio
from the mic. Didn't that rig have a PA function? Plug a speaker into
the PA jack and troubleshoot it strictly as an audio problem first.

If that works, then you'll have to move on the troubleshooting it
as an AM rig next.

But I'll lay odds one of the low level audio amps blew. Next choice
would be in the AGC/limiter for the mic gain.

Mike

i don't see how the fcc can restrict / control content on the net as there is a
first amendment right to free speech issue here, disclaimer or not.
the fcc can control my activities on the airwaves but not what or how i talk as
this is out of their jurisdiction.
this is why you can openly buy books on the subject of radio mods on the net or
in book stores. first amendment rules applies.

to fill your cigar box? the fcc CAN'T do anything about speech content here as
the first amendment would surely stand in it's way.
the only thing the fcc can control is hardware issues so you can stop trying to
scare people with your smoke and mirrors.
>
> I have tried to tell you that the FCC is going start enforcing the rules on
>11 meters as well as the ham bands but all I have gotten is insults and

it might be your delivery. if you reported equipment suppliers instead of
speech content, you would probably have more credibility with them.

>I suggest if I emailed you about illegal info or illegal equipment you were
>selling that you straighten up quickly because as soon as I can get this
>information in a neat form I'm sending it to the FCC.

and they'll round file most of it because they know they can't act on speech
content here.
>Go climb back in your little hovel and quit whining, because nobody here
>cares.
>

here or the fcc.
this is not aimed at you, toll. it's to the guy you responded to.

next to the audio output transformer, there should be a black diode. this is
called an anti-spiking diode.
if it's blown, it cuts audio to the transformer.
check it with an ohm meter. if it's open, replace it observing proper polarity.
good luck.

I have a question about his radio. When I switch to FM on any band the
radio goes quiet for a second or two then seems to revert to AM mode
with the FM indicator. I don't know that much about FM. I this radio
functioning on FM? How can I tell? Is there any other mod for FM other
than the channel expo? Thanks in advance for any assistance.
Rob

Take a look at what this guy thinks he is. He is a tech plus like me, which
means he only took the 5 wpm code test. Yet he is using cw abbreviations,
ie:HI HI and 73, which are only appropriate on CW. This guy is even a
ham wanna be. You would think a real ham who looks for DX on 15 meters
would be doing what he is doing. No, a real ham would not waste his time like
Rick does. Don't get me wrong; I am not a real ham.

Rick Bullon dribbled:

> Also if I'm being a pain let me know that too HI HI
> 73
> Rick Bullon
> KC5AJX

And since Rick does not have privileges on the HF bands, you can see
him at hamfests with his name and callsign on his baseball cap. He has
his two meter handheld on his belt, and a speaker mic attached on his
lapel. Rubber ducky commando. He meets his buddies on the repeater

and all they talk about is what pizza place that they will meet at. They also tell each other that they are full quieting into the repeater. While they eat their pizza in the restaurant, they all have their handy talkies sitting on the table listening to the repeater. With their faces stuffed with pizza and their fat bellies pushed up against the table, they talk about the low life cb'ers and how they are gonna clean them up, when they themselves are no better. They have no technical knowledge. Oh, they can change a battery pack on the Icom, or maybe install a mag mount on the car. Some even have an SWR meter. Yes, I have a tech plus license like Rick. I have been to the pizza place with the dorks like Rick. But I quickly learned after doing what they do, I am not like them. I have a life and they don't. Yes, I know people just like Rick, and I pity them. When you put this mental picture of him in your mind, you will pity him also. Do you think Riley Hollingsworth would hang out with Rick? LOL. I'll have more on this later...
Harry

You are correct, the control operator MUST sign. But the STATION license is REQUIRED. Now, if you visit a friend, then you can always say you 'borrowed' his station, and sign with your OWN station license. And there is no requirement to log it as such anymore. But my understanding is that excluding you 'borrowing' his station, the station license is the station license. There is nothing that prevents you from signing both, but the station license MUST be signed.

And the only time BOTH calls are REQUIRED, is that if you, as control operator, operate in an area where the privlidges granted to the default operator of the station license are exceded.

Just because you use someones station does not change the station license. You can still be control operator without changing station license.

I don't really see us as in disagreement, just that your method of identification 'assumes' the borrowed station. And in you're scenario, with the owner 'not around', they technically you'd better be 'borrowing' the equipement, otherwise it's an unauthorized transmission if you didn't have standing permission to use his equipment. Then it could be argued as a grey area if a violation occured, and the owner, just to cover his butt, would have to say it was 'unauthorized' or the equipment was 'borrowed'.

Back in the early 70's, when all equipment in and out of a station would be logged as in and out of service, this was readily apparant, as you, with 'your' call, would have to 'log' the station equipment you were 'borrowing'. Otherwise, you flat out were in violation. In addition, if
you were to operate your friends station as a guest control operator, you would enter it as such in the log. HIS log. You could also enter it in yours, but I don't believe it would have been required there.

```
If you think about it under the 'old' terms of logging station
equipment,
then the methodology of keeping track of what is 'required' becomes
clear.  Even though you don't have to do the log of the borrowed
equipment anymore.

And I agree with you about the abuse of calls...  No one really would
complain about one extra call for clubs or events, or even families.
But once there's abuse, how do you define the difference between 1
and 10?  It's much harder than defining the difference between 0
and 1.

Mike

```

Here is another Rick Bullon wanna be.
This clown has been a NO-CODE tech for 1 month and his
signature line on the bottom says "73 and happy DXing"
How does a "no-code" technician know anything about

what "dx'ing" is unless he used to do it on 11 meters?
And "73" is meant ONLY as an abbreviation for "CW",
which John does not even know what di-dah is. Hey
John, how long were you a cber before you became a
"NO-CODER" last month? You and Rick belong to the
same dork club. You are an idiot Ham Want To Be.
Real hams look for dx on 15 meters and rag chew on 75.
They don't go to restaurants and put their handhelds on the
table and listen to the local repeater while they stuff their
fat faces with pizza. Real hams also don't waste their time
on the cb news group. I have a ham license but I don't consider
myself a real ham. But I am also not a no-code know it all
either. I am not a self righteous hypocrite, which I suspect
that you and Rick are. Maybe I don't have a life, but compared
to you and Rick I have a great life. Maybe you and Rick should
put this effort into something that really matters. Do you get
this excited about runaway government spending? Are you
this passionate about confiscatory tax rates? Do you even
care about the millions of people going to hell for eternity?
No, I suspect you only care about what cbers are doing, and
where you and your rubber ducky commando buddies are going
for dinner. Now that is a wasted life.

Happy DXing John
Harry

does anyone know the dimentions of the cobra cb dish antenna?
it seems to me that to be resonant at 11 meters, it would have to be awfully
large. a friend and i are having a disagreement over this.
if any replies, please click the e-mail box also so i can save the answer.
TIA

jeff

Thinking of buying either a alan 9001 or TS3010. Which is better and wondering what coverage the 3010 has out of the box, and or is there mods to expand channel coverage.

THanks, Jeff

Well, just consider that the dipole you put at the focal point of the dish
will be 102" each side....

Sorry to be confusing...I only meant that the channel mod triggered FM showing up as an option when the mode switch is toggled, but behaves as I previously described. I just wasn't sure whether or not additional modification would make the radio function properly on FM.

BTW, I have seen mods referring to VR12 as controlling FM power, but this was blanket for DNT Calypso | Euro CB 3900 | Midland 79-290 | Superstar 3900 LCD | Team TriCom. This, in a addition to the FM indicator lead me to believe the FM mode should work.
Unless I hear differently, I'll assume this radio can't be modded for FM........
Thanks again.

Never had a problem with mine. The Chipswitch page (www.chipswitch.com, no I'm not a salesperson) mentions that the radio could have gone down to the 15m band but had some spurs that couldn't be removed so they locked it out. Could that be what you heard? Alternately, at 24.8 mhz your swr will most likely be quite high if you have an antenna tuned for 11m, but that's not abnormal behavior.

Just my $2.00 (I'm pricey)

dirk

No.

The point is that swing kits don't get you anything that a good tune-up won't get you. It's SOOO easy to put variable

```
     dead-key power in a Cobra 2000.  With that you can key at
     anything from zero to 7 watts and swing to 15 to 20 peak
     watts.  It's the peak to dead-key ratio that determines how
     loud you are.  The makers of the swing kits know that and
     use it to their advantage.  Now that you know their advantage,
     use it to your advantage.

How long did it take you to stop saying "10-4" and "break channel" or "watch
your mouth son, this is a family channel" answer that question you mudduck,
I bet just recently when you left 11 meters you were talking SSB on channels
36,37,38 and 39 on the CB dial and I would even bet you were running an amp,
complaining about the bleedover from the truck drivers, man you are a real
PUTZ, buttwipe................

                                                "DEAR JOHN"
                                 Reformed CBer out on the prowl,
                                     I am a no code, to CBer's I growl,
                                        I wear on my belt with pride as I
grin,
```

A scanner, two ht's and nutz on
my chin,
People dont like me, my

family as well,
And I feel as though my

life's gone to hell,

I know in my heart of what I must do,
Damn CBer's made me look like a fool,
I can't learn the code, my life's
such a mess,
I know I must do what I know

is for the best,
If I learn to love CBer's

and lower my nose,
Then maybe KAVORKIAN

wont give me a dose,

There are MANY better signal generators than the 2040.
The 2040 is considered "service" grade equipment not
"laboratory" grade equipment.

> We can't seem to
> find a replacement, but we are open o suggestions.

Real, hi-end shops use service monitors like the IFR-1200
and IFR-1500. Even at the lower end there are generators
such as the Wavetek 3001 that will suit your needs.

> Also, does anyone know of
> a watt meter that will read peak modulation like a 1040 ServiceMater, we are
> looking for a meter that will read "Swing" well.

The 1040 is nothing special. I'll sell you mine
for a VERY reasonable price. I use my 2040 because
I'm a poor CB tech, but for a decent price I'll sell
it too. In other words, I have a mint B&K CB test set
with original documentation that I'll part with if
the price is right. I'm especially prone to part with
the 1040. The Mirage MP-1, the Autek Research WM-1, and
the Bulldog are meters that are moderately priced and
will show peaks like the 1040.

You are definitely right ICM. Base stations are the "Real Deal", but
ebonics, politics... maybe, maybe not. Big Thunder-No numbahs, Brass, Old
Man in the Wheelchair, Toll Free and the rest of the southern stations that
are NOT ebonical linguists clean step some of the Afro-American Strappers.
Sometimes just holding a QSO with these fellas on the BOWL is a nice change
of pace. And (by no means of offense) their "Modules" are clean. Let me
tell ya! Sometimes I can't get past Big Daddy Kane, CC and Loverboy, but
when I do, those are the guys that I hear and try to get back to.

137 back out!

I am not sure how many good repair shops you guys and gals have in the
states but here in Winnipeg Manitoba Canada we are limited to 1 or 2 that
are supposed to be reputable??? I am hoping to hear back from the tech and
him tell me it was something else and my radio is ready to go?
Fingers are crossed?

that's what i said.
the only thing that i can figure is it has a radiating dummy load in the feed horn.

no, i would say it is YOU who is part of the problem.
harry is his own person instead of being a lock step / goose stepping ham like most of the rf police.
this just goes to prove what i've been saying all along.
if someone doesn't agree with the ham / arrl platform, they are lepers who's opinion doesn't count.
just for the record, your "opinion" here means less to us than ours does to you.

i took his point to be that a no-code tech who isn't a big jump above cb in
what it takes to be a ham doesn't have a whole lot to say about someone in
another service by virtue of his lack of knowledge.
hey harry, correct me if i'm wrong.

Believe it or not it is the truth. Around 10 years ago he bought an NIB
8877 tube from me as a back-up (a spare from my 77dx) because of all
the 8877 horror stories. It's still sitting in his shack unopened. I do
admit he babies the thing though (never pushes it to full output etc.).

We were just reading from different pages that's all. I for one have
long left glass tubes behind. Eimac does'nt make them anymore and the
price just keeps going up and up on them. Perhaps if Svetlana ever
releases their 3-600Z things for the 3-500z amp market will improve,
but I'm sure they aren't gonna give em away either. I have an L-4B just
collecting dust in my shack....anyone interested??????

>

Alpha
> 8877 based amplifiers.

Didn't you just say that the 8877 was the biggest failure eimac ever made? Frankly, I always liked the 8877 (although it is kinda "delicate" as compared to the 3cx1200a7). It's just too damn expensive to fool with anymore.

I was comparing current production models with similar output ratings. If you want to compare the 77sx to a henry, then you have to compare it to the 5k classic two holer (2 - 3CX1200A7). When you do this the Henry still wins hands down in the ruggedness category. Besides, the 77sx still fetches more than $3000.00 used, and is also out of the reach of the "typical 11 meter operator".

>
> >>>Don't sell Alpha short, just because they became another profit
center

amps...
> But, the 8877 is only a cut above... And the notches are not too far
away!
> With the two holer, at least you had nearly the same amount of grid
> dissipation that a single 1200A7 has!

I used to own an Alpha 77dx, and I agree......Alpha is definately not the company it used to be. For the price of an new Alpha desktop amp you can buy an infinately more rugged Henry console amp and have change left over. I'm sorry, but if I'm going to pay more than $3000.00 for an amp, it better at least have an oil filled HV filter capacitor in the power supply. And for goodness sakes Alpha....lose the 3cx800As....PLEASE!!!!

73.

```

```
I need some help from some of the pros out there concerning grounding...I
slip seat (different truck everynight) the trucks are usually Sterling
trucks with the famous fiberglass doors with no grounds.. The company does
not want us to use mag mounts because I have heard everything from 1. they
are grounded and we are nuts   2. it scratches the paint  3. it can fly off
and cause a law suit (stupid since it is behind a large air shield) 4. it
ruins the welds on the truck.   I have tried the Wilson no ground it is
garbage -can't hear. I have tried the solorcon zero ground it is better..
But I want to use my Wilson 2000 or a better antenna than the no grounds...
I have heard from some people that a floating ground works and then others
say it doesn't work.. I NEED ADVISE..

thank you

mike

When you do the mod on the 79-290, it opens a whole bunch more frequencies as I'm sure you're aware, but it also adds "FM" to the mode list... as you hit the mode button, you go through AM, USB, LSB and FM... but FM isn't actually added, but initially it leads you to believe so.

I think what he was asking is if there is a way to enable FM... if they have it on the display, then there MUST be a way to actually enable FM...

Well as to the ones that I have talked to on this NEWSGROUP.
There haven't been many.
I have personally talked to Toll Free a couple of times and I have talked to
Prime Minister many times.
I apologize if I have missed someone that I have personally talked to on the
Superbowl from this newsgroup. Please remind me!!!

Me too!!! Mr 1 Watt Willy.
2 Hots are a little tricky and IMHO only really work when you still have a
backdoor as a reflector. Awww shit I said I was only going to post jokes!!!!!

Question #2
Is this setup better than using 2 antennas.. Front hot 6 foot space and back
antenna grounded?
Thanks

RCI 2990 is a 100 watt base unit. The radio has been modified for 26-32 band coverage, the moulation limiter has been clipped(r291)this are the ONLY modifications done to the radio. The radio is a 9 for cosmetics and is one screaming base. Other features include digital Echo, variable pwr, AM FM SSB and CW operation, built in swr meter,dual fans, and a D104 Silver Eagle microphone along with the stock mic. I would like 475.00 + Shipping. This is a 600.00 radio and 100.00 mic hard to beat a deal like this
Thanks for the Read

I don't think that this diode is the problem. If the diode were to open, you would have no AM transmit at all, and SSB would be normal. If the diode shorted, you'd see about a 1/2 watt more carrier power out on AM, an everything else would work fine. Such is not the case according to the symptoms. AM and SSB have no audio, which indicates a problem in the lower level audio stages (Before the SSB tapoff to the balanced modulator).

The 448, was indeed "different". I believe it used an REC 86345 PLL. It was expandable, but not terribly far. The radio that I had (and others that I've seen) had a serious problem where if you changed from AM to SSB while the mike was keyed, you could pop the final transistor out. I did it 2 or three times before I wised up.

The mic preamp, like I said previously, had a knack for going bad. I had to replace it with a standard op-amp, and make the necessary changes to get audio back again, since the replacement part was not locally available.

The TRC-449, (an 858 radio) which replaced the 448, was a MUCH better radio.

I respected Dennis as well, but I seriously doubt that you could back up
that 99% number. You're just pulling numbers out of a hat based on your
own personal bias.
I've known some brilliant hams in my life, that could build damn near
anything. I learned alot from these guys at an early age. They're still
out there, although it is a shrinking number.

Dennis would have made a great ham. He, like many other people, just
seemed to have an "attitude problem" with the IMAGE of the typical ham.
I hesitated getting my ticket for many years for the same reasons. But
there are enough "flexible" people on there now, to make it interesting.

So much of this CB vs. Ham stuff is based on nothing more than image.
Radio is radio!

> I don't get into the loud
> mouth operators or any of the foul mouth discussions on this group. I don't
> talk that way. What boils me is these idiots who get their no code tech
> licenses and think they rule the world.

And those "bad boy" type CBers are any different? You know, the guys
that think that your popularity is directly proportional to the amount
of power that your meter shows.

> Nothing on this newsgroup is illegal.

Be careful of making blanket absolute statements. There are MANY things that could be construed as illegal, information not withstanding.

> Telling people how to modify their radios is legal. Now if they talk on a modified radio that is a different story. These idiots need to mind there own business and spend more time on their local repeaters where they belong.

So now you're their "mommy"? "Where they belong" is where they decide to be, not where *YOU* think they belong. Many hams are also (ex) CBers as well. Like myself, they care about the band and are concerned with the degradation that seems to be going on in increasing numbers. Many hams would never have gotten ham licenses, and would have remained happily on CB if the "riff-raff" factor had not gotten so out of hand.

> I don't care for a lot of hams and there are a lot more cbers that I don't care for. Most radio operators by nature are odd people.

Any "techie" is usually an "odd" person to those that only know their job, football, beer, the TV, and an occasional romp in the sack with their bimbo of the day.

You play with radios and computers (Otherwise, why would you be here), so that makes you somewhat "odd" as well.

> I like the technical stuff and the rest is garbage. Like I said most tech class hams know nothing technical. That's a contradiction in terms don't you think? Judging from your reply, I need to look on QRZ to see if your a no-coder too. Most likely.
>

I was in ham radio long before no-code became official. Interestingly enough, I see more tech-minded nocoders, than extras these days. The "techies" are the guys that always wanted to play with ham radio, but were turned of by the code requirement (Much like I am). Now they can easily pass the simple test and enter a much bigger playground to play on. There is more experimentation going on, in my area, by Techs and Tech +'s, than extras. Seems that all most of the extras want to do is work HF DX, and contests, and are perfectly happy to buy all their gear. (but they know 20 WPM, so they're the "better ham"). The "lower class" guys are the ones building repeaters, building packet links, dabbling in APRS and ATV, and actually building antennas and other projects.

I can't see any good reason, for people who are truly interested in radio, to NOT go for the no-code. The test is easy, and the bands and privileges that you gain are much better than what's on 11 meters.

Then there's the so-called "stuffed shirt" factor. So many people say that hams are rigid, boring, shuffed shirts. Maybe a few older ones are,

(the ones that talk about their failing health for hours on end)but if
enough of your friends get on the ham bands, you can operate the way to
want to (within the rules), and the heck with what other people think.
There are certainly enough bands to choose from.

I think alot of the CB metality also has to do with a psychological
condition. The same condition that makes binge drinking more fun when
you were underaged. The thought of "beating the system", and getting
away with something illegal, makes doing it so much more "fun". Shooting
skip, running power, modifying radios, all illegal on CB, but perfectly
legal on the ham bands.

> > The bottom line, people that are "into" technology hobbies are often

> >
>
> I'm not a dork. But even money says you are.

Oh? Based on what? You repair radios, I repair radios. You have a
computer, I have a computer. I guess we're both a couple of
"dorks".......

The big problem with Harry's "scenario" is that he make a few (too many) blanket assumptions. The biggest one, is that all no-coders are non-technical. That may be true in some cases, but certainly not in all.

Secondly, technical knowlege is not required to be courteous and observant of at least the rules of decency and common sense.

You guys are just as guilty as the "wannabe" hams you are attacking. You are making assumptions without any facts to back it up. Can you say

HYPOCRITE? Sure you can.
You don't like it when some of these guys (and they're not all hams) complain about the lawlessness of CBers, and make a blanket generalization. Now you retaliate with the same?

Blanket ad hominem attacks on people without any facts are nothing more than mudslinging, and no different than children in the playground.

> In the same way I didn't complain about bleed over from truckers, although I was known to complain if someone deliberately trashed a channel or decided to "show off" with over-modulation or an amp--but that was solely because I didn't (and don't) believe that anyone has the right to deliberately interfere with the right of others to enjoy radio as well. If a person ran a clean station and respected the rights of other users I could care less if he was running a legal Browning Eagle on a Super Magnum or an FT-101 with a 1KW amp and a cubical quad.
>

And there is is in a nutshell. It's not the amps. It's not the freeband. It's the ATTITUDE. The "I'll do what I want, the hell with everyone else" attitude. If your first reaction to this post is to say "F* you", then you have it and are part of the problem.

There is a good passage in the bible that basically says to do on to others, as you would have them do onto you. If people would respect the rights of others, and not be so self absorbed, and self centered, then there wouldn't be this mess on CB.

Just bought it and havent installed yet and I have 10 days to return it. The actual box is too small it seems to be much good. Hell it is like 3 inches by 1 inch wide? I cant see how this will work or if it will work well enough to keep. Figured Id ask in this group before I made an attempt to install it.
Thanks All
Alan

If you don't like CB, and turned it off and became a ham, go
find another NG to whine on. You are a hypocrite! You are nothing!
Don't bitch at me for using a two pill. Just because you can't talk
skip on AM from your mobile on 40 CH CB, can't stand the heat and
general dysfunction on CB, take your NO-CODE license and get on
2 meters. I'm sick of your whining. Dr. Kavorkian has your shot ready!

Yeah, I agree there. I had a friend with a 448, and you could expand
it, but not NEAR as far as the 449 chassis. I didn't think it sounded
near as good as the 449 on transmit audio either. Rather tinny.
Although it was just as sensitive as the 449, and handled interference
a little bit better until I ripped apart my IF strip in the 449 and put
in
the crystal filter (RS built the 457 that way, so I just ordered the can
and the filter, then moved one can in the 449, took out the jumper,
and put in the new can and filter and tuned it up). I don't know
why RS carried both rigs, unless it was an issue with quatity, or
just the fact that RS wanted more rigs in their lineup in 1978.

I never knew a 448 to fail though, and I don't recall EVER seeing one
in the repair shop...

Thanks to everyone who responded to my inquiry, both in the newsgroup and via email. It's great to see that there are so many knowledgeable people willing to help out. Fortunately, I was able to have my 148 GTL fixed at a local radio repair shop for only $15.00. It turned out that the knob shaft for the volume/squelch control pot was not as badly damaged as I thought, and the tech was able to straighten the knob shaft without much difficulty. The dynamike control pot had to be replaced, however. There was also an LED wire which had broken loose when the radio was dropped which had to be resoldered.

Thanks again for all the help--it is greatly appreciated.

The TRC-55?  The old 23 channel rig with the 'flip over' clock?  It
even worked as an alarm clock?

Wow, I haven't seen one of those for maybe 22 years!

Just find something that 'fits' into the AC receptical.  But if I
remember
the rig, there was a 'switch' in the AC receptical.  I'm not sure about
the 55 though, but look at it, and see if there was a mechanical
lever so that when you plug in the right power cord it switches out
the 12v jack.  Not all the rigs had that.

Sorry can't be more helpfull, but even when that rig was current, it was
fairly rare....

You would be wise to get a real radio such as the cobra 25 or 29, or the
Uniden PC66 or 76......much less problems

Please read all of this post.

1. I have a WORKING Realistic TRC-458 which is a 40 channel CB base AM/SSB radio that I am selling for a freind. The radio is some scratches and a bit dirty, (belonged to a smoker). Has NEVER had any extra channels put in it.
Great radio, as it can do over 200 channels. Info on the net. It has the 858 chip.
Full service manual included (a $ 25.00 value)
Sell 1 and 2 for $ 75.00 plus shipping.
Picture avaliable for the TRC-458 ! ! !

2. A TRC-449 mobile CB radio (same board as the TRC-458) for parts.

3. A Radar Detector, manufactured in the 70s (working the last timre I used it, before the law changed).
Sell for $ 35.00 + shipping.
Picture avaliable ! ! !

4. A Kenwood KSC-4 battery charger (working) with service manual.
Sell for $ 25.00 + shipping.
Picture avaliable ! ! !

SAVE SAVE SAVE! ! ! !
I WILL ask $ 125.00 + shipping for ALL . Items sold as-is, radio have no mike.

Please reply to email as I do not often get to this newsgroup. He want to get this stuff sold ASAP, so please reply ASAP. I will reply to you Monday to Friday only.

Thank-you,
Greg

I have a Realistic TRC-212 (21-1662) for sale. This is the full size
40 channel unit with carrying case. High/low TX power switch. Around
5 watts output on high. LCD display with TX and receive meters.
Great shape. Original long (around 5 feet) center loaded antenna. Has
external antenna, power and charging connections. Has an 5-pin
external mic connection as well. Uses 8 'AA's or 10 'AA's
rechargeables and you can recharge the batteries WITHOUT taking the
batteries out. (Batteries and charger not included)

Asking only $ 40.00 plus shipping.

A Picture can be e-mailed.

I'm new to this game and need a cb for a motorhome. I would appreciate opinions as to the best mobile or handheld units on the market. Pat.

Anybody out there got a mod to make the Sidewinder 400 hold it's frequency
and mode when turned off and back on?????
If not does anyone have a diagram of this radio or pin out info on the SY202
microprocessor used in the Sidewinder 400.
Seems to me that you should be able to add a 3 volt lithium battery and a
switching diode in the right place and cure this problem.
Thanks in advance
Tony

Now what the hell does mean you dumbass newboot ham driveup?
You probably dont get out much, and if you do I bet you dont act like this in public, and I bet you do very little about the drug problem with children, or gang violence, which is a hell of a lot more important than your jealousy for someone who can talk on the radio and choose not to take a test to allow them to do so. Just because you had to study your ass off doesn't mean we have to, hell the test is fairly easy to memorize, but learn 20 words a minute at code and then you will be doing something. You see I am a CBer by choice, the friends I have hear dont require me to be someone IM not and they could give a rats ass if I show a certain character or say breaker, breaker. I can tell you this much I dont operate out of band, my equipment is cleaner than yours and I do help with the drug problem and gang violence by speaking at schools and around my neighborhood amongst others and if you were to bring your whinebag stuck up attitude in my face I would be the shit out of you...Period, not because of what you preach, but because of how you preach it.   stop wasting our time and go see whats happening on UHF and VHF and plan the way you are going to install a real antenna one day, not some converted TV antenna. MUDDUCK!!!!!

Hey John,
  Figure it to a light (1 watt) 2000 feet away on # 22 gauge copper wire, in a area with a temperature of 135 degrees Fahrenheit, now tell me what the voltage drop would be and what size wire should we upgrade to? Lets say this is teflon insulation, rated at 200 degrees Celsius.

Lets just see how smart you really are, I bet you cannot answer this or even reply to it dumbass.

If all of what you say is true then why do you whine so bad about keydowns?
these are always done on the lower CB channels for a few seconds at a time
once every few months, a hell of a lot cleaner than these same people
running them on upper channels and having daily QSO's, which is where they
would probably be if it were not for key downs, and no the message was to
John not you.

I am planning on mounting an I-MAX 2000 in a tree that has a height of about

90 - 100 feet (Hemlock I think) A couple of opinions would be helpful from
others who have done this.

The tree's trunk in stout most of the way to the top.

How far out from the trunk should I mount it, and

Does the trunk intefere with Xmit and recv?

Also, Any mounting ideas?

Thanks.

I've been thinking about getting an Expo 100 S+ kit for my Cobra 25
LTD/WX Classic. How hard is it to install for a do it yourself project?
My only experience with the soldering gun has been pl259 plugs and mic
connectors. Is there any shops out there that will do it? Thanks.

Howdy!

I'm learning more and more about CB's, and noticed that some [such as the Galaxy units] have "Clarifier" and "Talk Back" features. Ok, I'm a newbie, but what are these and what's the advantage to a CB?

Thanx for sharing your expertise!

Best Regards,
Jay

yes get that sucker up in the very top of that tree and ground it to the
center of that tree and use some good rg8 coax and you are all set , of
course up to 2000 watts pep, ...icm out......

That reminds me of one of my Rat Shack adventures:

A long time ago I was in there pricing 3 1/2" disks. I decided to buy a box, and when I brought them up to the counter, the guy says, "You need batteries with that?" WTF?!?

The tech license hasn't been around for 20 years if thats the "tech" your reffering to.Since february 14th '91 I believe.

Also equipment prices have fallen by about 1/3 in the last 3 years for a lot of the popular stuff.An HF rig with 10 bands and 6 modes,100 watts,tons of scan and memory options,etc,etc,etc,can be had for as little as $599 and lesser rigs cost less.Compare thet with the high end CBs with 3 modes,12 watts,1 band,MAYBE 10 memories,MAYBE some primitive scan function and you tell me which is the better deal?

I know a Wall-mart driver that runs 4 resonant radials from his 2000's
mirror mount vice grip bracket.He runs a couple outside and a couple
inside.They are made of standard lamp cord and he tries to keep them
fairly horizontal or sloping downward slightly.

Talkback is just to let you monitor your own voice but it may or may not sound the same on the air.Galaxy is famous for useless gimicks like echo boards,transvestite boards,frequency display and talkback.These seem to impress the kids.

Clarifier is used on SSB radios to tune exactly to the other station and although it may be called something else ALL SSB radios have it and I highly recommend you get an SSB rig.

Dennis would have made a great ham. He, like many other people, just seemed to have an "attitude problem" with the IMAGE of the typical ham. I hesitated getting my ticket for many years for the same reasons. But there are enough "flexible" people on there now, to make it interesting.

>>>Dennis WAS a ham, and had tried it.

It was boring to him.... Too many elitist attitudes and appliance operators.

That is the same reason that I gave it up.

What is "good" RG8 Coax? I see a lot of specs that say 95% shielded. What's the diff? They all seem to say 95%. Is there something else I should be looking for?

You've caught it at a good time. 14.313 has been known to be one of
the worst cesspools in the amatuer space at times. There's also an
area down in 80M the same way.

It usually runs fine, until someone comes on and 'interfeers'. Then it
seems things get out of hand real quick. But I've heard that there
were a few 'regular' instigators that have been silenced recently....

Mike

Sounds like....

He's trying to set up two antennas either as a phased 2-element
array (to reinforce signal along one axis and attenuating along
another at 90 degrees) or as a single active element using another
antenna as a director/reflector.

Why buy the 79-290 when you can get an Eagle Sidewinder? The Eagle has all the features of the MIdland like dual watch, last channel recall, band scanning, a course/fine clarifier, mic gain, and dual finals. What the 79-290 doesn't have but is standard on the Sidewinder is a REAL RF gain, FM mode, a PA, the ability to switch bands by pushing a button WHILE ON, 400 channels (verses 240,) and a microphone with channel up/down buttons. The Sidewinder is a much better radio all around. It may not have a removable control head or weather channels like the 79-290 but then again who really wants a radio that pops the control face off in mid key? As far as the weather feature goes, stick your head out the window and look up!!!!

Your opinion of what these VHF hams do is irrelevant. Whether you like their conversations, subject matter, appearance, or choice of restaraunts, the fact remains that they're operating legally, and in most cases, courteously. If this type of operation seems boring to you, in comparison to the "loud and proud", "Lets see who can step on who", no holds barred, CB operation, then I can't expect you to understand. Reality check: *YOU* are part of the problem.

You call a ham with an HT on the restaraunt table a "dork" with no life, yet you see nothing wrong with running around with a 9 foot antenna on the roof of your car, and enough batteries and alternators to power a small country, simply to run "big power". I would say that you would need a life as well.

The bottom line, people that are "into" technology hobbies are often viewed by the technology have-nots as "dorks". Like it or not if you're into CB, you're as much a "dork" as any ham, if only for slightly different reasons.

I don't think that I am part of the problem. I don't do any of the things you cited above. I don't talk on radios much. I do alot of repair work. I get on this group and try to get some technical expertise from knowledgeable people. One of my favorite gurus was Dennis #12. He knew more about radios than 99% of hams do. I don't get into the loud mouth operators or any of the foul mouth discussions on this group. I don't talk that way. What boils me is these idiots who get their no code tech licenses and think they rule the world. Nothing on this newsgroup is illegal. Telling people how to modify their radios is legal. Now if they talk on a modified radio that is a different story. These idiots need to mind there own business and spend more time on their local repeaters where they belong. I don't care for a lot of hams and there are a lot more cbers that I don't care for. Most radio operators by nature are odd people. I like the technical stuff and the rest is garbage. Like I said most tech class hams know nothing technical. That's a contradiction in terms don't you think? Judging from your reply, I need to look on QRZ to see if your a no-coder too. Most likely.

> That's Strange... I've had my 3k Classic ( 3CX1200A7 ) for nearly seven
```

> years and it's still on the same tube at full output.

>>>The 3CX1200A7 is a different animal altogether. That is a tube that is
worth a shit.

Better yet, my
> friend who lives across town has had his 3K Classic X (8877) since
> the eighties with the original tube.

>>>That I find very hard to believe, as would Dan, the distributor for
Henry.... The 8877 tube is the biggest failure that Eimac ever made.

You're the first person I have
> ever seen propose that having a heavy duty power supply is detrimental
> to amplifier performance.

>>>No, I am not saying that it is detrimental to amplifier performance.
What I am saying is that the bigger power supply will dump a HUGE amount of
current to the anode if their is a flashover, causing the anode and other
parts of the tube to burn up.

>>>Henry's do suffer from parasitics in the old 3-500Z boxes. Those are the
ones seen most on 27 megs. Your amplifier is a little "out of reach" for
the typical 11 meter operator.

I think perhaps you've been hanging around the
> poster who once suggeted that hooking up one's coax to a car battery
> would amplify your signal.\

>>>Funny.

>
> My grandchildren will be using my Henry, quite possibly with the same
> tube still in place. Can you say that about an Alpha with it's dainty
> 4-watt grid dissipation tubes????? I think not!!!!

>>>Wait. Let's compare apple to apples... What about the two holer Alpha
8877 based amplifiers.

>>>Don't sell Alpha short, just because they became another profit center
after Dick Ehrhorn sold the company! Before that, Alpha was a name up their
with the rest. I agree, the 3CX800A7s are shit tubes, for shit amps...
But, the 8877 is only a cut above... And the notches are not too far away!
With the two holer, at least you had nearly the same amount of grid
dissipation that a single 1200A7 has!

>
> You're not totally hopeless though...I do agree with you about the
> Collins. The 30S-1 is still to this day a great amplifier.

I am far from totally hopeless in the amplifier arena. Keep reading.

Who are they ? I am a davemade user, always was, always will be, I prefer to
follow a leader. I have no affiliation with them whatsoever other than
this, but you can bet your last dollar dave has never made a post on this
NG, even after the underhanded things your "group" has pulled, let alone
trying to push his amps.

HE
> BACKTRACK...NOT HE IS LEARNING JUST LIKE EVERYONE ELSE!
============================================================
Whoa wait a second now, for starters nothing has changed with his chassis so
remember the word "assume" its happening again, and secondly The wrap around
chassis has been around for sometime at daves ask 123 about the 250b cases
and the ac chasiss, and the plans that dave and dan had talked about over
breakfast about dave changing to the wrap around on the dc stuff. He even
went so far as to draw the plans for them, funny thing is when dan left so
did a few copys of the new chassis design that never made it to them metal
man. He aint learnin shit, he forgot more about electronics than the 3 of
you put togther.

>BUSY WITH MANY ORDERS THERE IS NO TIME TO PREP FOR THE WORKLOAD.

Its called assembly line production..Mister Ford invented it in 1929...You have someone whos only job it is is to cut boards or sinks.You have someone who only drills and presses.Someone to measure cut and sort various coax and wire so that when you`re building your 5 pill you just reach in the bin that say "5-pill coax" and grab one.It would be stupid to have to stop and measure and cut in the middle of every amp...Sure if you got one guy going from start to finish it will take a while..But I doubt even your set up is that disorganized

I hope I did`nt brain my damage.

R U a HAM? If you got a license, no matter what class, you are a
licnesed Amateur Radio Operator (HAM) no one should bemoan the fact of
class because those people who brag I AM AN EXTRA (ADVANCED, GENERAL)
are surely showing no class at all.

I fought for Tech-be proud.

We are looking for a BK Dynascan signal generator (2040), we need another
one, or a suitable replacement for such fine equipment. We can't seem to
find a replacement, but we are open o suggestions. Also, does anyone know of
a watt meter that will read peak modulation like a 1040 ServiceMater, we are
looking for a meter that will read "Swing" well.Thanks Folks.

Gee, that is funny.

It is simply and plainly evident who posted / wrote what.

If you look, the original text (since this was a post / email) is designated by the ">" sign before the text.

My replies are denoted by the ">>>" before the text.

Screw you and your ignorance, by the way.

Your an asshole. Plain and simple.... An uneducated, illiterate, unadulterated, knows nothing, can't use the brains that God gave him, has no semblance of resolution deduction skills idiot.

Hope your parents are proud!

Get an education.

Get "Hooked on Phonics".

Then get reading comprehension books. They will go a long way toward combating the illiteracy that you now face.

Toll Free

I was wondering why so many hams put there complaints and such on the newsgroup.

Are they just trying to make sure they stir up things here or what?

I understand their complaints but I don't need to see it all the time.

I have CB's , some are modified, and some are not. It depends on the quality of the equipment. I don't use power, I don't care about screaming matches etc..... If I wanted to own a HF ham Style radio. I would have it.

If I wanted to have my money drained out of my pockets, I would put holes in them. I have been I tech for 20 years and just don't care for over price equipment with primadonna's on the other end.

At least CB's are real people, and you know right away what there worth.

Good day to all,
And lets see if we can be nice to everyone.

I was sent this message regarding the bowl.

"If there are 10,000 cber's on the superbowl...
  then out of 10,000 only 1,000 can be heard some of the times...
  and out of 10,000 only 100 can be heard most of the times....
  and out of that 10,000 there are probably only 10 of the most well known guys that talk on the superbowl and can almost talk skip when they want.....
Do you know that out of that 10, maybe just maybe there are 2 of them on this newsgroup. They probably have talked to each other as well.
East Coast???? West Coast???
Do you know who they could be???"

This is a great example why the bowl is not for the weak!
Check out those odds.

I'd look at it this way - if you replaced the knobs and the pots behind them, would the radio still look "good" - if not, you may want to bite the bullet and buy a new radio, selling your old radio at eBay to offset the cost of the new radio.

Shop rates vary from $40 - $75 hour round me (NJ), but the higher priced shops are really catering to commercial radio repair, not CB or Ham.

A new "consumer" radio (non-export model) should cost about $150 - $200 at worst, and a repair job will easily cost you $45x2, plus part costs... In otherwords, the wrong side of $100. :^(

Hope this helps,

Ken

yawn, what else is necessary to live up these great expectations, a thorough
knowledge of ebonics, perhaps, a tad of policitics, if you know , what i
mean, and a damn good base station with a good beam system, piss on the
mobiles, that just a joke. the real deal is the base stations, that being
said , it should also be said that it would be nice if you were located in a
area that was shall we say , higher up than normal , such as a mountain or
whatever, just my read on the sit, ......icm out.......

well it is like i said, they are jealous of the power levels that are
achieved from time to time on 11 meters and also they have a tendency to
want to police the cb band without doing anything to speak of , on the ham
bands, if you don't believe me ask them,.........icm out..........

No.

> How can I tell?

FM has a very different receive sound compared to AM.
With the squelch open (fully counter-clockwise) FM
has a very harsh sound compared to AM or any other
common mode of operation.

> Is there any other mod for FM other
> than the channel expo?

I don't understand. Channel Expo usually means
extra channels--not extra modes of operation.
The 79-290 already has a very easy mod available
to get 200 extra channels. There is no easy mod
(that I know of) to enable the FM mode of operation.

You may be confusing mode of operation and frequency.
For example, CB Channel 20 is on the frequency 27.205,
and the mode of operation (AM, FM, USB, LSB, CW) doesn't
change that. In other words, mode of operation and
channel (frequency) of operation are independant of
each other.

I don't know the current exchange rate, but 195 sounds like too much
for that radio.  For SSB and FM use it's a good radio, but you may
want to keep shopping for a better price or go all the way and get a
President George.  The George is a Lincoln taken to the next level
of evolution.  The 2510 style radios are based on a 15 year old design.

That is the purpose, that is why Texas bug catcher antenna use the
capacitence hat , to shorten the stinger. Now dont get me wrong I dont
suggest using one of these things, just saying that is what is supposed to
do if you add it "above" the load.
Power House / FeMaster wrote in message
<5657-38146DF6-12@storefull-134.iap.bryant.webtv.net>...
It's a gimic and completely useless. If you really want one, just click
the link below and buy it and put it on your Wilson 1000. You'll notice
just how useless it is when your antenna can no longer acheive a decnt
SWR wthout cutting off about 2' of the whip...

Go to the local techs and see what they want to fix it. If the radio works and the only problems are straight forward and mechanical, an old-timer tech that has a number of 148s in his bone yard (parts radios) should be willing to fix it for an hour or less labor and $5 to $10 for parts. For example, I'd do it for $40; that's an hour at $30 per hour and $10 for parts. The radio is definitely worth spending $40 on. The techs that won't take that job and match or beat my price are all youngsters and/or punks that don't have a decent bone yard and shouldn't be trusted in the first place. You have the perfect radio for testing the competance and experience level of the techs in your area. Keep in mind that guys who want you to drop the radio off and pick it up in 2 to 4 weeks are obviously going to be ordering the parts and should be considered middle-of-the-road techs.

Yup! I found no useful content on that crappy website.

I guess a registered monitor or scanner or whatever the hell he
is one of 3 things.

1) he's to stupid or lazy to take the ham exams

2) he thinks he's an udercover kinda "007" type dude.... and being registered
    kinda authenticates this in his mind...

3) He thinks showing his registration patch on his roebucks jeans will help him
     pickup little boys.....

I'd like the group to keep in mind that JUST THE CARD is worth about $200 on
the market for an "H" card......Don't sell them too cheap ! ! ! !

Texas Star 667. Bought brand new and used for about one week. I just don't have the room in my truck for it and could use some pocket change.

$200 Buyer pays shipping (about $15)

> Your license is a STATION license, with OPERATOR privlidges.

That is not true at all.  You are licensed for the privelidge of using the
equipment on the bands designated.

If your license was a station license, you would have to have equipment that
was capable of working within the constraints of the license (like a CB
radio has only 40 channels, etc.).

>
> You can still technically apply for multiple licenses for multiple
```

> locations, although if you do that, the FCC frowns on that.

No, that is not totally true, either. You apply for multiple licenses, and
those licenses better be for different "things", ie. repeaters, controllable
stations, etc.

> The problem was the FCC 'technically' allows individuals to file for
> all kinds of groups and club licenses.

No, not <<totally> true again. The FCC allows a club to license a station.
However, the control op for that station better have the same privelidges to
operate on that band, or the license is in violation (on both ends!)

> What happend was when the database was checked, they found individuals
with many more than they could ever use. One guy had 23 separate calls!
> The FCC has started procedures against the individual to
> revoke all the extras.
>
> But that's just the extreme. I did a check of licenses in my area,

Actually, unless there is a valid club or special event station, I see
it as being abuse. There are few enough calls to go around, we don't need

one
person using multiple calls. In this region, you're stuck with a 2x3 call
until you hit Advanced class, and even then the Extras are all 2x2 instead
of
1x2 or 2x1 calls. It doesn't help when someone is holding multiple calls of
ANY licence class...

>>>However, it is almost a moot point, as the way the licensing is going,
there won't be much of a need for any 1X2 or 2X1 calls after the next few
years!

The technican class has been around at least 21 years, and i would venture
to say longer.  Maybe you mean the "No Code Tech" has been around since 91.

Here are a couple of suggestions. Get a good sturdy pole would be the most important. A 30 foot push up pole would be best if you plan on having it stick out of the tree much above the last place you strap it. Use good quality plumbers strap or something similar to this to strap the pole to the tree. Use Galvanized nails too. For the bottom I would look at Radio shack PART # 15-899. It is a base designed to handle a pole in it. this is a great way to mount the base at a Y in the tree to keep it from kicking out should the lower strap give out. For 8.99 its worth the piece of mind believe me. As for Coax I prefer Beldon RG 8 in the white. It seems to be more pliable then the Black. If ya have amy more questions feel free to Email me.

Thanks for your opinion..I can pick up a ts3010 NIB for about $345
Canadian or 235.00 US. This price would incl taxes and no shipping as
I could p\u. The 9001 say at 250.00 US would cost me about $370.00
Canadian, plus shipping, plus customs fees\tax...for a grand total of
approx $450 to my door. So I guess the bottom line is for about another
100 bucks i could pick up the Alan. I guess it's worth the 100 for the
difference in radio. Its the 15% tax here in Ontario, combined with
the US\CAN dollar exchange thats a real kicker!

Hope to hear from others who know either radio.

THanks, Jeff

>How does a "no-code" technician know anything about
>what "dx'ing" is unless he used to do it on 11 meters?

Actually, it's easy for ANYONE to know something about DX'ing, provided that one is not restrained by the same narrow interest in radio that you apparently are.

One doesn't need any kind of a ham license at all to know what the term DX means. What is and is not DX varies with what band you are on. I live near Niagara Falls, NY. For me to talk to - or hear - a station in say, Columbus, Ohio on VHF would be DX. For me to hear the same station on HF would not, as far as I'm concerned.

Nor does one need to transmit at all to participate in it. I got my start by chasing DX on the shortwave bands for 33 years as an SWL. And that's been chasing UTE stations, not the megawatt powerhouse broadcasters. Try logging and confirming McMurdo Station in Antarctica, 9450 miles from my station. That is DX, whether you like it or not. So is hearing Texas on VHF on my scanner.

>And "73" is meant ONLY as an abbreviation for "CW",

Yeah? Then why do I hear hams using it on all the voice modes, on HF as well as VHF/UHF? Why do commercial RTTY stations end their transmissions with it?

>which John does not even know what di-dah is. Hey

You *assume* I have no knowledge of morse because I happen to have a no-code license at the moment. Didn't your mommy ever tell you what happens when you assume, Harry?

Di-dah is the letter A, which is the first letter of a profane term referring to a certain portion of the human digestive system to which your attitude causes you to bear a remarkable resemblance. Can you understand that, or do you want the two di-di-dits, the dih-dih-dih-dit, the dah-dah-dah, the dih-dah-dih-dit, and the dit to go along with it?

>John, how long were you a cber before you became a
>"NO-CODER" last month?

24 years. So what?

Since what's good for the goose is good for the gander:

```
N5JOY              REED, HARRY R
LIC ISU  9-MAY-1996
TECH PLUS
```

LIC EXP 9-MAY-2006
LST UPD 9-MAY-1996

So, Harry, how long were you a CB 'er before you became a ham in 1996? And you've had three years to upgrade your license, so why are you still at the same license class you started with three years ago? Written exam for a General too tough for you?

>same dork club. You are an idiot Ham Want To Be.
>Real hams look for dx on 15 meters and rag chew on 75.

Real hams hold an Amateur Radio License issued by the Federal Communications Commission if they are American citizens, or if they are not U.S. citizens, then issued by whatever licensing agency governs amateur radio in the country in which they hold citizenship. Want-To-Be hams have no license, and operate in the so-called Freeband between the CB band and the 10m ham band...or sometimes even IN the 10m ham band, all illegally of course. As a Tech Plus, you have phone privileges in the novice phone sub band of 10m and perhaps you have even heard some ham wannabes up there. If you have, and that doesn't bother you, then maybe you should just mail your license back to FCC.

>They don't go to restaurants and put their handhelds on the
>table and listen to the local repeater while they stuff their
>fat faces with pizza.

Oh, really? Just what qualifies YOU to judge who is and is not a "real ham" based on whether or not they carry a handheld with them when they go out to eat or have coffee with other hams? Hmmm? Tell us that.

One of the guys I sit at a table with when I go out for coffee is a General and has a 12 by 12 room in his basement where his shack is. The walls and ceiling are covered with QSLs of contacts made on CW, AM, SSB, FM, and some digital modes as well. He listens to the repeater because he is on the station committee for the club we both belong to and in the event that something goes wrong with the repeater, he is one of the people who has the responsibility to go over there and take it off the air or fix it, as appropriate. I suppose you would consider him a ham wannabe?

And yes, I bring my handheld with me and leave it on the table too. I'm sure not leaving it out in my truck where it might get stolen. I don't need to have it turned on to listen to the club repeater because there's already a handheld tuned to the repeater belonging to the guy across the table from me. So I let my batteries rest.

>Real hams also don't waste their time
>on the cb news group. I have a ham license but I don't consider
>myself a real ham.

I will resist the temptation to again state what I consider you to be. I have already done so in this message, and in any event, it is a matter of opinion.

> But I am also not a no-code know it all
>either. I am not a self righteous hypocrite,

That, too, is a matter of opinion, particularly the part about being a self-righteous hypocrite. Your further comments show the contrary to be more likely to be true:

>to you and Rick I have a great life. Maybe you and Rick should
>put this effort into something that really matters. Do you get
>this excited about runaway government spending? Are you
>this passionate about confiscatory tax rates? Do you even
>care about the millions of people going to hell for eternity?

Nice of you to ask this question AFTER you've already launched a personal attack on both myself and Rick in the NG. I will not waste my time rebutting your drivel because such things are off topic in a radio NG anyway. If you want to talk politics or religion, take it up with your Senator, or a priest.

>No, I suspect you only care about what cbers are doing, and
>where you and your rubber ducky commando buddies are going
>for dinner. Now that is a wasted life.

Oh, really? Did you just invent a new cure for cancer? Did you just find intelligent life on another planet? (For that matter, can you even find intelligent life in your own shack?) What major contribution have you made to society that qualifies you to judge whether or not other people's lives are wasted? Self-righteous hypocrite seems to fit you to a tee.

73 and good DX'ing,
John D. Kasupski

>Now what the hell does mean you dumbass newboot ham driveup?

Channel frequencies. Reference frequencies from which the carrier
frequency, suppressed or otherwise, may not deviate by more than the
specified frequency tolerance. If you had bothered to read Part 95,
you wouldn't have to display your ignorance by asking.

>your jealousy for someone who can talk on the radio and choose not to take a

>test to allow them to do so.

You think that's what this is about? Your reading comprehension scores in 8th grade must have sucked the big caramel stick.

Lots of people talk on radio without taking any test to allow them to do so. I have no problem with that, as long as it is legal for them to do that. The people that I have a problem with are NOT operating legally. Some of them - maybe even YOU, judging from your comment above - don't even know what the rules ARE, let alone make any effort to follow them. Those are the people my comments are directed at. If the shoe fits, wear it.

> Just because you had to study your ass off
>doesn't mean we have to, hell the test is fairly easy to memorize, but learn

Actually, I didn't study anything.

I went to a hamfest with a couple of my friends because I wanted to find an HF receiver there to use in my hobby of shortwave listening. I listen to a lot of HF utility stations and I needed a second receiver to park on a certain frequency I wanted to be able to monitor while scanning the bands with my other receiver. And, I did buy an HF receiver at that hamfest.

While I was at the hamfest, they were having a volunteer examining session and taking walk-ins. One of the guys I went to the hamfest with was ribbing me, saying that if I had studied for a month or so before that day, I could take my test and get a ham ticket. I responded that I probably already knew enough about the subject from my 33 years as an SWL to pass the Novice class written test without studying if I wanted to. That remark was met by general laughter, so to prove a point I made a bet with my friend. I told him I'd go in and take the test, but if I passed it, he had to pay for it. If I failed, I paid for it. And the loser also bought lunch. He agreed, and I went in and took - and passed the Element 2 test.

Having done that, and thus having won the bet, I decided to try an Element 3a written test - at that point I had nothing to lose anyway - and much to my surprise, I passed Element 3a also, thus qualifying for the Technician class license that I now hold.

I actually had no interest in ham radio at all until I got my license entirely by accident.

>breaker, breaker. I can tell you this much I dont operate out of band, my
>equipment is cleaner than yours and I do help with the drug problem and gang
>violence by speaking at schools and around my neighborhood amongst others

Good for you. But you miss the point that if you operate cleanly and legally, than I have no problem with what you are doing. It's the people operating illegally that I have a problem with. Like I said, if the shoe fits, wear it. If it doesn't fit, then you needn't concern yourself with it.

>and if you were to bring your whinebag stuck up attitude in my face I would
>be the shit out of you...

Well, first of all, if you're running legally there we be no reason for me to getting in your face about it, so it is a moot point if what you say is true about you operating legally.

Secondly, you sound pretty tough sitting who knows how many hundreds of miles away behind a keyboard, but as far as real life goes, you have no knowledge of my background whatsoever. You MIGHT end up doing what you say you would do...or you might TRY it and wind up in jail and/or in the hospital or morgue. You ought to learn to find out something about the people you're shooting your mouth off to before you go shooting off your mouth.

>this is teflon insulation, rated at 200 degrees Celsius.

>Lets just see how smart you really are, I bet you cannot answer this or even
>reply to it dumbass.

The formula to calculate voltage drop is:

vd=((2*k*l*i)/cma)*factor

Where k=12.5 for copper, 18 for aluminum. factor=1 for single phase,
.866 for 3-phase, and .5 for 3-phase 4-wire. l is one way circuit
length in feet, i is load in amperes, and cma is cross sectional
circular mil area of the conductor.

However, voltage drop alone will not determine the correct size
conductor. Conductor size must also be selected to carry the load as
determined by the appropriate ampacity table, which I don't happen to
have handy.

Of course, all of that has more to do with the National Electrical
Code than it does with anything to do with RF...dumbass...

Howdy:

I've got a basically brand new Cobra 75 WX ST that I installed a week ago
that I need to sell. Quite simply, it doesn't fit my application all too
well...

First, know that this is an all in one unit with a very small "brain" that's about 1in x 3in that you can hide anywhere. It's well suited to almost any vehicle. Here's a picture:

    http://www.bills2way.com/equip/images/c_75wxst.jpg

I really have only two gripes with this unit:

1. I drive a diesel truck and the small speaker in the handset is not loud enough for me to hear over the roar of the engine at highway speeds. If I open the window, forget it. Moral of the story, don't run a diesel with this little guy -- if you've got a gasser you're fine. I _would_ add an external speaker & forego the loss on investment, but just don't like the looks of 'em, nor do I really have a decent mounting spot -- I basically need something with a front-firing speaker that aims at me.

2. I have small hands and can't seem to get my hand around the unit well enough to adjust volume on the one side and hit the PTT button on the other. Anybody with normal size hands will be fine with this, but I don't like shifting my hand on the handset all the time. Call it a pet peeve.....

Some will recall my static and noise complaint the other day. With the help of a local CB shop we traced that to ground noise and a poor squelch setting, so I can't in any way fault this Cobra unit. In fact, if it weren't for the above factors, I'd keep it as it fits the "installation" of the other gear I have in my truck to a "tee." Oh well...

I paid $89.99 [List Price of $119] from Bills 2 Way last week, plus shipping. I have everything for this unit, all documentation, wiring & mounting hardware, except for a few screws I lost for the Mic mounting bracket -- I used some screws from my "coffee can," and I'm sure you can do the same.

I'm looking for $70.00 [money order] plus freight, and it's yours -- not bad for what's essentially a barely used CB.

You can respond here, but I will get back to you quicker if you contact me via email.

Best Regards,
Jay

--
Ironic that to be a good liar you have to be a genius to cover all the angles, yet that lying is a ploy most often chosen by fools.

That 1996 date is a renewal. Even though I don't use it, I don't
want to lose it. I also have a general radiotelephone ticket that
I got in the late 70's. Do you know what that is?

> And yes, I bring my handheld with me and leave it on the table too.

I think you and Rick started the personal attacks here. I believe I
can get a few people here to verify that. I mean this whole
thread was started because you and Rick want to push your
RF ENFORCER tactics and bore everyone here while you

```
recite part 97 for us. I believe most of us here know what it
says already. You are not our mommy.

>
> For that matter, can you even find intelligent life in your own shack?

Only when my wife comes in. No, really I don't have a shack. I have
a 6 foot bench in my garage with test equipment on a  rack above it.
I have a B&K-1040 and 2040, a 500 MHz HP counter, a 60 MHz
Tek 2213 scope, an HP 204C, a Simpson 260-8 and a Fluke 27FM,
a Trad URM-25D signal generator, a beta transistor tester, a curve tracer,
modulation and deviation meter, watt meters, and a bunch of other clutter.
 I have an Icom 2AT that I bought 13 years ago and  some mobile cbs
that I own but are not hooked up. That sums up my shack.

The problem is we have been having technical discussions with some
very intelligent techs on this group. But lately some morons and some
newbie hams have come on here and made it not so enjoyable. You guys
whine and moan about the legalities of our second amendment rights.
You newbies are the ones who started all this. We have lost most of the
good techs on this group because of jerks like you. They don't want to
read your garbage. But I am not as smart as them and I remain. Because
there are still some good ones out there. I am not passionate about
radio. I very often leave it in favor of my family for weeks at a time. I am
agitated by self appointed RF POLICE and discussion group police.
You have no business here so move on.

This is the reason amateur radio is not appealing to the masses. Why would I want to publicize my name and address only to have some jealous idiot broadcast or turn it over to anyone? I would be the first to admit that ARS is very attractive but all of the crying turns me away. I have been on the radio since 1977 and I have been jammed, keyed on, had my ears plugged and bled on and I never felt the need to turn someone over to the FCC. It is as simple as this: turn it off or change the channel. Then there are "Guests" in this newsgroup. The word on the street is they feel they have been mistreated by CBers. I figure they need to feel important too. Kinda makes me glad I'm a man.

Remember, this is CB. No crying allowed!

Miles Davis

Several things about bleedover:

- You know where your friends are

- When you bought the radio, you bought the bs/bleedover

```
- You're bleeding on your neighbor as much as he's bleeding
  on you
- Stop crying and start buying!

If the "anyone" you are referring to is the FCC, realise the FCC is not foolish. They will seldom take drastic action (fines, etc) unless they have a recording. And, if they have a recording, they can easily tell if that is your radio on the recording. In other words, they have ways to identify your radio from the radios used by others.

As for your vague complaint about self-policeing in the Amateur Radio bands, it is urged by the FCC. And I strongly agree with that policy. A ham operator can use equipment with very advanced capabilities (high power output, satellite, moon-bounce, long-range repeaters, potential global communications, etc.).

Without rigid policeing (both self-policeing and policeing by the FCC), a misguided person, out for mischief, could cause a lot of serious problems for a large number of people, including those on other radio services.

Therefore, it is not as simple as "turn it off or change the channel." If we allow those out for mischief to tarnish the image of amateur radio (by causing problems for others), we would quickly lose our priviledge to use the great number of frequencies and capabilities entrusted to us by our government, and the governments of other countries around the world.

In other words, with increased capabilities comes increased responsibility. Most ham operators understand, and accept, that responsibility fully. If you cannot accept responsibility, I strongly urge you to stay out of ham radio.

alot the same story here John, I got my license by mistake also   ha ha....back in the early 60's I was just out of the service (Navy) and had nsome time left to use the GI Bill for extra schooling and decided to study electronics and started a 2 year course. I had been a novice but had let it expire because I was too busy to mess with it....anyway at the end of the course I drove to Kansas City to take the exam for the 2nd class radiophone license and passed it with flying colors....upon leaving the FCC office I noticed a sign telling about the amateur exam's the next day. so I figured what the hell, might as well stay all night and go for it. I did and passed the General exam....it was easy after after the test I had just took.....but just barely passed the code.though....by the way I also got a Sonar endorsment. why? because it was only one chapter in the book and I was bored the night before the test. man thats just what i needed, a sonar endorsment in N.W. Arkansas ha ha...

Ok, lets expand on this a bit. What is it about CB that is less boring than ham radio? What can you do on CB that you can't do on ham?

The people with the "elitist attitudes" can be avoided. You can easily recruit a group of friends to 2 meters or 6 meters, and have a ton of fun. You don't like appliance operators? Great! neither do I, but I don't let that affect what *I* do on the band. They do their thing, I do mine, there's room for all.

Who started it is irrelevant. It takes a much bigger person, to just say "Sure, whatever you say" and go about your business.

The one sure thing about the human race is that we're all different in one way or another. There will always be conflicts when people of different mindsets collide. But as long as what you are defending is purely subjective in nature, then you have no more "rights" than the other guy does. It's all based on opinions. We all have them, and they're all equally valid or invalid.

Calling someone a "dork" based on their particular hobby interests is just a reflection of your own insecurities. (the old school trick. Pick on someone else before they can pick on you).

Someday, that "dork" may save your life, or may be the guy you have to interview with for a job, or to get a mortgage at the bank.

Scott (Unit 69) wrote:

> If you don't like CB, and turned it off and became a ham, go find another NG to whine on. You are a hypocrite! You are nothing! Don't bitch at me for using a two pill. Just because you can't talk skip on AM from your mobile on 40 CH CB, can't stand the heat and general dysfunction on CB, take your NO-CODE license and get on 2 meters. I'm sick of your whining. Dr. Kavorkian has your shot ready!

News Flash: Not all of us want or appreciate skip or the people who insist on working it. Many of us like to chat among the locals with relative peace.

Remember, for every yahoo that you try to work skip with, you are interfering with local communications in both your area, and the areas that you "skip" to.

Your words reflect your selfish attitude. You do what you want, and don't care about the people you affect. It's not up to them to "just turn it off, if they can't take it", they have a right to operate there just as you do. The world doesn't revolve around you and your interests. A thoughtful and courteous person always allows room for others to enjoy their recreation as well.

I can only hope that someday, you'll get a lesson in humility, when you're on the receiving end of the acts of another selfish person, and get a taste of what it feels like.

Miles Davis wrote:

> This is the reason amateur radio is not appealing to the masses. Why would I want to publicize my name and address only to have some jealous idiot broadcast or turn it over to anyone?

Why should you fear this? Only people that have something to hide need to fear this loss of anonimity. Besides, what ham would care? Hams frequently give out their phone numbers or addresses on the air. Unlike CB, there aren't a bunch of mentally challenged people waiting to cause trouble with this information.

> I would be the first to admit that ARS is very attractive but all of the crying turns me away. I have been on the radio since 1977 and I have been jammed, keyed on, had my ears plugged and bled on and I never felt the need to turn someone over to the FCC.

There's very little of this type of activity on most of the ham bands. Why should anyone have to endure this intrusion into their recreation? It would bother me that certain selfish individuals hold the rights of the rest of the public in contempt, and would welcome any action to correct that injustice.

> It is as simple as this: turn it off or change the channel.

Why should anyone have to accept that? Other people paid for, and desire the right to operate in peace. Why should a select few selfish morons be allowed to ruin the fun of a greater majority of people?

If they were truly your friends, they would be where YOU are.

> - When you bought the radio, you bought the bs/bleedover

No, you bought the means to enjoy a hobby. Interference is a fact of life. But interference caused by the deliberate actions of a select bunch of self-centered people, is not something that you should have to put up with.

>
> - You're bleeding on your neighbor as much as he's bleeding
>   on you.

Not necessarily. If I run a 100% legal station, I will not be bleeding (Splattering) nearly as much as someone who paid "Joe the Butcher" to "tune" his radio, and then run the splatterbox into a class C amplifier and make a bad thing even worse.

> - Stop crying and start buying!

I find is somewhat ironic, that the "lawless" people have been telling the rest of us for years to just "turn it to the left, and stop crying", when they run their illegal equipment, are now the ones crying that the FCC may soon be clamping down on them. I say, what goes around, comes around.......

Toll Free,

Well, your opinion. I know that my latest license does not word it that way, but the liceneses the FCC to grant up until the mid 1980's specifically said station license on the form with the call sign on the left side, then the right side said sometime like operator and privlidges or something. (This was the old yellow form in the carbon paper peel apart thing that was hardly readable at all.)

I WILL have to research that further.

And you are correct in what you say, but the license is a station license, and you can define what is in that station. I see no reason why you feel that a station license means the equipment would be limited. Being a HAM station means just that, a HAM station. There is nothing in the rules that limits any equipment that can exist in a HAM station, just how it is operated.

As to the multiple license issue... Yes, you are correct, but there are still licenses on the books for multiple stations. Under the old rules, if you went 'portable', you legally had to sign that you were 'portable'. (For some reason, mobile was not portable, unless you were out of your area.) You were allowed to be 'portable' for so many days without formal notification, and you HAD to sign your call with a 'portable x' suffix, even in your own call area where 'x' was the area you were operating in. After so many days you were required to have a letter on file with the FCC engineer in charge for that area that you were 'portable'. If you changed you address, and you crossed into a new area, then a new call sign would be assigned.

There was some issues with people like college students and people with 'summer homes' kind of thing where they were over time limits, and the way a lot of people 'got around' the issue was multiple calls. Technically I suppose they were 'one person clubs' or whatever, but while I haven't looked for them lately, I know that as late as the end of the 80's there were calls for VT and NH for people from other states that had home calls elsewhere, because at the time I knew two individuals in that situation. I'm not saying that was correct with the 'intent' of the law, but the letter of the law allowed it to occur.

Mike

i wonder if i'm the only person that notices that it seems like the only hams that come here to start trouble are the same ones not accepted by there peers.

this kasupski ass hole is here bothering us because he's a low life tech. thats nothing more than a cb'er that went to high school. if this guy is so into swl like he said then 11 meters wouldnt matter. in no way do we bother the international bands. i kinda got a kick out of him trying to show off passing the novice and tech test, how old was that little girl who just got her liscence? 7or 8??? this kasupski guys a troll.

> Ok, lets expand on this a bit. What is it about CB that is less boring
> than ham radio? What can you do on CB that you can't do on ham?

OK, Ill give it a shot:

1. CB is less formal (eg callsigns)

2. CB is more diverse (More CB radios mean more individual personalities involved, good and bad)

3. CB costs less

4. CB is less likely to be monitored by someone who thinks they were knighted a radio cop

5. CB is time tested. The CB band behavior hasnt really changed in the past 30 years. Look whats going on right now on the Ham bands. (eg 20 and 75 meters)

6. CB equipment is much more easily acquired. (Theres more Radio Shacks than there are HRO's)

7. CBers are much more open to different opinions. (Try going on 80 meters and openly advertise that you are a Democrat, you'll be ripped to shreds)

8. There are some good CBers who dont give a rats ass about how a radio works, yet they are great people to converse with, which this is probably my biggest "Pro CB" point. The reason for this is because these are the people that would have never found on the Ham bands to begin with. When you go on a Ham radio, you have a basic understanding of the person on the other end of the QSO by virtue of the common ground created by the HAM license. With CB, you get what you get, sometimes bad, but always diverse.

> The people with the "elitist attitudes" can be avoided. You can easily
> recruit a group of friends to 2 meters or 6 meters, and have a ton of
> fun.

Why should one go through these extremes just to talk on a licensed required radio spectrum when a person can do the same on CB without a license, in addition to having a more diverse audience or pool of potential friends? Recruiting people for CB is no different from recruiting people for ham.

>You don't like appliance operators? Great! neither do I, but I
> don't let that affect what *I* do on the band. They do their thing, I do
> mine, there's room for all.

This I agree with, however after having been involved in both Ham and CB for many years, Ive found there is nothing on Ham Radio that I cant do on CB Radio.

I don't know about the mod your looking for, however I can save you a few steps which will get the rig up on 11 meters more quickly.
Just key up the mike before turning on the radio and it will come up on 11 meters, ch.9, fm.

I have the following Radio, and electronic equipment for sale. Will consider trades for Hand held Scanners with full 800 coverage. All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks
EJ (KC5EPI)

All Tube Items:

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Non Tube Items:

HTX-202: Radio Shack 2 Meter HT. Works good. Slightly chipped where the battery slides in, but does not affect operation. No nicad or antenna, but I will include the AA Battery pack with the unit. $80

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation I would rate a 9.7. Also have original manual, in excellent condition. $200

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $50.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $75.

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $125 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

Realistic Patrolman-6: Portable AC/DC Receiver with AM, FM, air, High/Low VHF and UHF bands. The radio works fine but the dial cord must be disconnected. Dial not moving. AS $15

RS Pro 30 Scanner: Hand held 16 channel scanner. Looks & Works good, but the battery cover plate is missing. Make me a reasonable offer.

I was wondering how high you really should have an antenna. I have an I-MAX2000 about 85 feet in the air in the pine tree and I think i receive excellent and transmit excellent. So what does everyone else think?

```
IT APPEARS THAT MOST OF THE SUPERSTAR CBER'S ON THE SUPERBOWL DONT
REALLY FREQUENT THIS NEWSGROUP. SO FAR IT ONLY APPEARS TO BE A FEW.
TOLL FREE
PRIME MINISTER OR SKULLCRACKA
ICECOLDNYC
CAPTAIN BOSS
YELLOW JACKET

AND OUT OF THOSE I KNOW THAT TOLL FREE AND ICECOLDNYC RUN MOBILES.

I run a Galaxy DX-99V on my base it is by far a better radio than anything else out there but a Uniden Grant XL or a Cobra 148GTL isn't a bad choice either.

Just completed road trip in western US following years of overseas residence. Traffic on Ch 19 seems much reduced compared to late 80's and early 90's. Have "Smokey reports", chit chat and the like moved to other channels, gone away some, or ?????.

Thanks

BigBamBoo also used to get out here, but doesn't much anymore, unless it is to sell a radio or amp.

Other than that, you are right. A lot of them READ the posts, though.

> Ok, lets expand on this a bit. What is it about CB that is less boring
> than ham radio?

>>>>I have found that on the amateur bands, people want to act
"professional", to the point of making sure that you ID every 10 minutes
(who cares if I ID every 7 minutes, or 12 minutes for that fact.  I
positively ID when I remember too, and that is that), HAVE to talk
professionally (I am destinated, Q signals on FM, etc., etc., etc.), and the
ones that I really like, the light bar weilding public safety wanna-bes.
```

>>>>I ran chase for a professional bicycle riding team last year, and this is what I found, that REALLY turned me (and my Alinco) off...... I went up to the ARS communications facility, introduced myself as a member of one of the largest teams, informed them that I was running chase for them, and wanted to know the input and output of the portable repeater they used, or at least a simplex frequency. I was given the one finger salute, told that the information that I wanted was not being "given out to just anyone" and told that unless I was a member of the club, I was not supposed to be in the area of the Comm building.

So, fuck them. That is the general attitude of the ARS community in the Houston area. I got my ticket in Northern California, and had a BLAST!! If I go back to Callie, I will be sure to take my radios with me. The attitude here is that unless you pay your dues, pretend that your comms are ALWAYS life threatening, and act like you are a cut above normal society, you are worthless.

And no, I didn't let them see the double coil 11 meter antenna on my mobile, didn't let them know I even operated CB, and conducted myself in a professional manner in front of them. They where just ..... Assholes.

On a funny side note, though, they ALL wanted to see the suburban and the station after the ride.... It made quite a story as their "official" vehicles relayed info back to the "barracks" about this crazy antenna on the white suburban. A couple even asked about the radio setup, how I produced the power, etc. Kill 'em with kindness, and I introduced them all to the high power art in the mobile...

Incidentally, I did have an emergency to relay to them, about a driver that had run two people (cyclists) off the road. I found their simplex frequency and after 5 or 6 calls of distress, I finally got someone to reply. Yes, I did give my call each time, and yes, I did wait to see if their was traffic.

What can you do on CB that you can't do on ham?

>>>>Get along with people a lot easier. Cut up and have fun. Be myself, not have to worry about who is listening, taping and making memos of who to snitch on now for not IDing for 14 minutes.

To mention a few.

>
> The people with the "elitist attitudes" can be avoided.

>>>>Not here in Houston. They are everywhere. I tried, tried different clubs, different repeaters, etc. Good old boy syndrome, maybe.

You can easily
> recruit a group of friends to 2 meters or 6 meters, and have a ton of

This I agree with, however after having been involved in both Ham and CB for
many years, Ive found there is nothing on Ham Radio that I cant do on CB
Radio.

It is not totally true that the finals are readily available.

They are still shipping some with the MRF477, while others are coming with a standard 2166/2312C combo.

So, toss the dice.

Don't quote books, since you feel so smart calculate the equation, and let
us see how smart you really are, its obvious YOU think your very bright,
well prove it.
Hey the next time you quote a book for an equation make sure you only
include what pertains to it, I have never seen nor heard of a 3 phase
incandescent lamp. and explain to me how you would get a one-way circuit to
work. The 2 at the beginning of this calculation is for there and back
calculation.

We weren't talking about swr. The comment was made that 1/8 spacing was equal to 6 feet. I was merely pointing out that 1/8 wave spacing at 27 mhz works out to roughly 4.5', not 6'. With regard to the antenna system that I had mentioned, swr was never a problem as the system was quite broad, as swr never rose above 1.8:1 for 300 channels, or about 3 mhz.

>channels without interruption.

Rick whether you beleive it or not the majority of the locals in the area of a keydown end up at the keydown, and are really in awe at the stuff, I have NEVER heard anybody on the CB say a keydown is stupid and useless.
now how would this interfere with them, they would be more upset if they posponed the keydown.

>There is absolutely no reason (other than
>stupidity) for _anyone_ to key a mic over top of an existing qso.

Rick there is no QSO unless it is DX, and they do not acnolidge us, or care for that matter, these keydowns are held on the quietest, clearest channel possible. I have never heard some one running a keydown tell some one to leave the channle that there was a keydown in progress.

>If it
>is an empty channel and someone is tuning up, fine. But dumping carriers
>on people?

It is an empty channel, or they will atemp to find an empty one, Ive even seen them wait on the truckers to pass through before they keyed. and how can someone be " tuning up" and you be OK with that but you disagree with keydowns,Why would someone be "tuning up"a CB? you dont always make yourself clear, Keydowns are not as bad as you think, Hell they are no different than street racing, and a lot less dangerous, I understand what your gripe is, I just dont know why you voice it towards keydowns this is not where the bleedover or freebanders are at, these keydowns are generaly the only time the equiment used in them is fired up.
I personaly think it should be treated like drag racing, ilegal in the streets but legal if held in a place designated for the event, I mean you dont think the people who live right behind the newly built drag strip enjoy the sound do you? but one thing is for sure it is legal if done in the drag strip and the people who live by it generaly come to enjoy watching the event.
I just think that people ought to lay off of the keydowns, they are not that bothersome.

They are still there. Alot have gone below channel one to 26.865 AM and
around that area. Most trucks wont do the speed limit anymore(limiters)
so they dont care where the smokeys are.

36'and 72' work real good and so does on the ground as long as you get
rid of the resonant radials and run lots of wire,of course this works
for skip but not too well locally.

Dave, there is enough "silent jamming", elitists, and other things going on behind the scenes that it's pretty much equivalent to being jammed directly.

Case in point.... extra class smoe 4 letter boy tells some guy something about radio that you KNOW is wrong. You jump in and try to rectify the situation and you later find out that the guy ended up listening to the 4 letter retard and ended up blowing up his radio.

It's jamming but in a "polite" form. Is there any real difference? No, the net psychological effect is the same. Hence why I avoid pompous hams as well as the truely assnine CBers.

Some people have accused me of being an asshole at times.... which I suppose is true. I beat up on people who come up on SSB and run echo and a string of roger beeps. But at least I try to help them make their radios sound better. We've had people jam us but we're above that. Nobody jams our home anymore because we just outsmart them before we outgun them. (but we're working on that too, just for fun.) :)

The bottom line is both CB and ARS have shitheads and your only option is to avoid them and get the most enjoyment out of your hobby as you can.

Mike

I totally agree. Before most of our locals became hams, we used to have
to develop plans to deal with the occasional butt-head that only lived
to disrupt other people's hobby. It's ironic that many of us were driven
to running illegal power or channels, just to avoid these low-lifes.

Hams have their pompous know-it-all, but generally speaking, you can
ignore their ego's. They don't follow you around and disrupt your

conversation.

although i am an out-bander, i have to agree with some of what you said but the
part about cb'ers crying is untrue.
there are no "laws", only "rules".
we are NOT the ones crying it's the rf police hams who keep crying in our beer
about our activities. when we choose to "cross the line", we take on the
responsibilities and consequences for our actions upon ourselves so who's the
one doing the crying?
the only negativities displayed here either come from the hams or are brought
on by the hams upon themselves.
these are the ones diong the crying, not us.

Thanks for looking, please Email any replies.
I am looking for some parts for a Tram D201. I am looking
for the plastic knobs on the control pots, not the internal bits, just
the knobs. Also, I am looking for a nice set of the wood side
covers. Tim - tim960@aol.com

WHY I GOT MY LICENSE. BY MARTIN D. WADE

After being in CB for many years in the 70's and 80's I needed more versatile system. 27 MHz could not be used for calling home from Alaska, Only 40 legal channels, all noisy. (Try using an amplifier (PILL MACHINE) on a military base!). In 1989 during the Valdez Fiasco, I challanged the Novice Exam with 5 wpm (Coppied 27 letter straight before I skipped) so I had a Novice License with 10 meter priv. Calling home was no problem, direct communication with a ham in my home town (Neighbor) helped out.

Upgraded to Tech in Nov 89 to get a 2 meter FM in the Car. Great move, cell phone was just on the scene and costly, the autopatch let me call home form the Car or Rig. Not private but usuable and versatile.

Upgraded finally to Advanced in 1992 and don't have the desire to punish myself with 20 wpm. Amateur Radio-you can take it or leave it, your choice.

As for me, I am in the phone book and callsign database, try to not disturb the neighbors with TVI and strive to run a clean operation. Any radio hobbyist will tell you to enjoy whatever you like so long as you don't create problems, especially for the "Masses" who don't know the difference between CB and HAM, their reaction is to outlaw the whole bunch, both CB and HAM.

A license (in my life and personal experiences) has open doors with employers as showing a demonstrated ability, during a TVI inspection brought on by the cable co. I was able to demonstrated I WAS NOT the culprit (The cable TV co cable leaked). When I arrived at the Canadian Border, my license allowed me to bring in all my radio gear (The Customs Man was looking for illegal CB equipment) and my license showed a professional side to the hobby.

Not all HAMS are boring, stuck-up or rude (or ready to call the FCC at the first sign of an 14 minute ID).

I own CBs too, my late father was truck driver and had CB before Smokey and the Bandit popularized it. In those days he could call across town to tell mom he was on his way. (He also had a 23 channel handheld he once spoke to aguy in Puerto Rico with on skip!) Too bad we can't return to tghe quiet usefulness of early CB, I really miss that.

To each their own.

73 de Martin N5PZJ

once again, i agree with what you say.
the one thing that would concern me is any nut that has a short wave radio can pick up a call book and get YOUR address and do bad things to your home.
i picked up a 1996 call book cd at a yard sale for $1.00 and i probably have YOUR address as well if you haven't moved in the past 3 years.
this is NOT a threat but if it's THAT easy to get your numbers off the air or the net and get your address, it would worry me. i wouldn't want my address and personal information spread world wide that easily where there is NO acountability as to who accessed it. even my phone number is unlisted.
at least, if someone goes through public records, there would be a face to face contact that might be traced should a crime occur.
i would not worry about the fcc as much as some serial killer or someone who may think they have a long distance bone to pick with me, getting access to my qth that easily.
we all make enemies or hard feelings with others wether intentional, accidental, or just by standing up for what we believe is right. it all depends on how the other guy handles the situation which, you must admit, can be a very unpredictable at times these days.
good luck.
jeff

Hi, I am looking for a Robyn T-240D tube type radio. I will send up to $40 bucks on this radio. Please email me and tell me what you have. If you like, I will trade a Cobra Ca-75 power mic plus $20 bucks. Thays equals $40 bucks. I'm selling the mic for $20 and given $20 more to equal $40. Email me if you are interested.

Thanks Buckaroo "223"

yeh i think kasupski needs a generous serving of poontang pie, of course he probably can't get it up anyway, so you get this tirade about cb radio. perhaps he gets some kind of cathartic response from this. oh well, maybe someday he will feel appreciated by someone, of course i know his wife appreciates him. he still can mow the yard and take out the garbage. and we cber's appreciate him for his wonderful posts to this ng, and the marvelous opportunities we have to squash this mudduck like a grape. that being said , i think i need to go to the john and take a big kasupski,.......icm out........

I would get the - kit, as most all the AM operation on the freeband is done
below channel 1, and the area above 40 is usually SSB only.

It doesn't take anywhere near 200Kw to make 100Kw output.

It takes somewhere along the lines of 130Kw to produce 100Kw, as deep class C as these boxes are biased.

Even in the city, during heavy skip, you should get out more than a block. Check your radio and antenna for proper operation and condition before you run out and buy a linear. Trust me...if you cannot get out a block with 4 watts of power, your radio or your antenna is not working right.

Yes, then we would all have this warm fuzzy feeling. There would be no wars. No gangbangers shooting people in the street. No random acts of violence. Children would respect their parents. Lions lay down with the lambs. No death, no disease. Wow. Maybe in a perfect world.

I'm back into CB. This is why....

My wife and I commute 80 miles a day on Rt. 80 in NJ. One day recently we were in a real parking lot, we just sat there (usually we are at least moving). The radio reports said something about a rig and some cars trying to be on the same piece of asphalt at the same time. At about the two hour mark, she rolled down the window and shouted to the rig next to us "how long will it be?" He said, "3 minutes".Yeah right!

Three minutes later we were on our way. I looked at her and said, "it's time for CB", and she agreed.

The next saturday, I did the usual, "I went to the Shack". I picked up a relatively small, but featured (RF gain) number for $79 and an antenna for $14. We were going to Foxwoods in CN for the weekend+ and it was another world being able to listen and yack with the rigs (she talks, I drive). When I got up there, the next day I found a local Shack and got a fiberglass whip that gave us better reception on the way back.

A week later, heard about Buzz Brothers, located off of Rt 15 in NJ, just south of 80. I popped in there and it was TOYLAND! Intending to get "just" an antenna, I walked out with a K40 and a Uniden PC68XL. The install in the

Cherokee was a snap and the whole deal was under $200. Other than awesome reception what's nice about the mag mount K40 is the "twist-off" coil and rod so that you can get into the garage. The radio is as close to DFQ as you can get on 11 meters. Ken at Buzz told me the secret is turn squelch to 1/2 and ride the carrier with the RF gain.

One other comment. We find the "drivers" about 85% professional and polite. We're doing this every morning and night during weekdays and there have been VERY few idiots. Swearing and bitching is no big deal and even the best of them (and myself) do it, but it's done only as a natural human reaction to both 4-wheelers and rigs that are doing stupid human tricks. Further, my wife, who is blessed with a wicked sence of humor, and surprising witty drivers, leads to an enjoyable commute. So rather than just sitting in traffic, in your box, pissed off, you can interact with humans in the situation, and that is what it's all about.

"c'mon"

Greg

Naw...this thing is not going to operate on the same principle as a true satelite dish would. In other words...its a gimmic, no feedhorn at all, and about the size of a large pizza or so with an omni directional radiating pattern. I would say that it is Cobras version of the 11 meter dish manufactured and marketted by the French company President.

(snip)

Couldn't agree more. Add to that that the Internet, as awesome as it is, is also the greatest challenge to privacy in the history of humanity. 1800search.com... if I know ANYTHING about you, I can search public information databases for a small fee and learn almost anything about you. In the past, one had to hire an expensive PI and it would take some time. This is a bit OT, but radio is not really an issue about privacy compared to the net. I think the plus side is that this reality tends to make us more sober, more responsible, less challenging, and more tolerant.

None of this is going away, the dam is broken. With universal access to information ("knowledge is power"), the game has changed, the rules are different, and one's beheavor and actions must accomidate.

It's the best, and worst, of times.

Greg

Why is it important to purchase a matched set:

1. The transistors are matched for gain curves
    A. This means that each transistor will put out 100 watts for 10 watts in, 50 watts for 5 watts in, etc. Otherwise you can end up in an unbalanced situation, with one amp block, or one transistor in a pair causing problems.
2. The transistors will draw the same quiescent current
    A. This means that that each transistor will draw the same amount of standby current, and that translates into each transistor will be operating in the same class of operation.
3. Equal current distribution
    A. This means that you will not have any hot spots.

The list is long, but these are 3, right out of the gate. Yes, the matched set is a little higher, is not <<always>> necessary, but I ALWAYS do it with class AB SSB ready boxes.

You can run a non-matched set in a Class C box, due to the smaller duty cycle, but I don't recommend it.

Michael,

You are full of shit.

Please see below:

> We will be happy to repair your amp for you,

And judging by this post, he would be lucky to get the thing back working at it's optimum level.

> but as a do-it-yourself project, you need new torroid coils,

Bullshit. The curry temperature of the torroids would have to be extremely low for this to happen. If you really knew amplifier theory, you would understand what the amplifiers problem is, and tell the guy what to do to fix it.

> don't wind them yourself(rfparts.com)

Why? It is easy. Pull the old windings off. Get a length of teflon or hi-temp wire, and cut it to the same length as the old piece. Then, rewrap the torroid. Takes a grand total of about 5 minutes. Rocket science, it is not!

> also, your "pills" are almost deffinately fried, check them like you would
a
> diode, or use a transistor checker, either way,

You can use a simple go-no go. Judging from what he has told us, the base emitter junction is most likely fried, although it could be the CE junction. Remove the base from the PC board, take the positive lead of a DMM or VOM to the base (connects to the small transformer) and the negative to the ground plane of the amp (connected to the case and the ground wire). Take note of the reading. Now, reverse them. This should be done in the "Diode check" mode, or RX10. If you saw a deflection on the meter in both ways, you have a leaky transistor. If not, and you get 600 ohms resistance (or thereabouts) one way, then your transistor is probably good. Check the collector to emitter and collector to base the same way.

Also, their should be a 10 ohm resistor from the base of the transistor (where the small transformer is connected to the "pill"). This is likely fried, and where the smoke came from.

get the matched quad from
> rfparts.com,

Or wherever you can find a good deal, although RF Parts is my recommended company to purchase from. They have been in business (and where in the amp business... Pride Electronics / Palomar) for more years than a lot, and can be a big help, if you talk to the right people there.

and make sure to re-bias the new transistors when you install
> them,

1. The Palomar amplifier he has doesn't run bias in 90% of the chassis I have seen... Like the Boomer Deluxe models. You should know this if you are an amp mechanic.

2. If it does (rarely, I have seen some that do), then their is no way to adjust the bias on the thing. That was a good thing about the rangemaster / commander / Palomar DX and 300A / 250A solid state amps. You could adjust bias independently for each pair.

they won't be exactly the same as your previous configuration,
> unbiased means heat, and heat is of course bad.

No, actually, unbiased means less heat, as the transistors are conducting class C.

You knew that, right?

>
> And in the future, the Wilson has the metalic foil on the bottom of the
> antenna for a reason, that's your ground, ungrounded means high SWR, and
> hence..heat.

That should read "hence.. High standing waves".
High standing waves means high voltage reflected, which means that the currents in the amplifier rise, and things start to go pop.

The other thing to check is the combiner... That is a large torroid that combines the 2 banks of two transistors. It is usually paralleled by a single large resistor (50 ohms) or 2 (100 ohms). When you lose one transistor, this is likely to go.

Your amplifier broke into self oscillation (which is common, believe it or not). That is from high swr causing feedback from the output to input. Chances are you fried a couple if not all transistors, and the 10 ohm resistors to base, and the 50 (or 2X100) ohm resistors across the combiners.

Total of all the parts needed is about a hundred bucks from RF parts. You can use a MRF455 for the driver, and a pair of MRF492s for the final transistors. The 2SC2290 will also work as a good final.

Hope this helps.

junk the k40 get a center loaded or top loaded antnna
with a 26 1/2 inch tall 29.99$ RS center loaded antenna
i can talk 15 to 20 miles when the band is clean
when the skip is roling in i can talk about 10 miles
i have found look alikes of that antenna for 10$ to 15$
with the same performance
and the radio is a stock trc-422 and no amp
talking to the base station that has a home made
ground plane up 30 feet with a stock trc-433 and no amp
and a 120 feet of rg-8u
from another moble which is a minvan with a center loaded
4 foot tall antenna with a stock road master or somthing cb
with no amp the range is about 10 to 15 miles and about
6 to 8 with the skip roling in from moble to moble

73,s DE N9WOS

The splatter boxes mumble
The splatter boxes hiss
The splatter boxes crackle
The splatter boxes torment
The splatter boxes bleed
And above all
The splatter boxes splatter
Day after day they clutter the band
And destroy the usefulness of it

Please spread the word of the
CBAA (Citizens banders against amps)
And
NAI (No amps international

You should be able to talk miles without problems, apparently you have a problem somewhere. Check the antenna with a SWR meter, a cheap unit from radio shack will do (under $ 20) and you will use this thing many times in the future, There could be other problems but I would start here.

Hello Tim: Yeah I hear ya. But where ah gettin low on trolls. The entertainment value is running low, not to many left.

I like when the trolls say something like: "When all the linear amps are gone CB will be a better place ect ect." Totally forgetting that CB is on a very skip rich HF band. I have a old tape recording made in 1962, on CB channel 5, the old Jolly Roger from Jacksonville Florida talking to all the Big Strappers out on the West Coast of California. The Jolly Roger would say he is as bear foot as old Huck Fin! True American CB Folk Lore.

Jay in the Mojave

After reading my post, it sounded kind of vague. What I mean is the term
efficiency, as in linear amplifiers.

What's the big deal about call signs? They're really no different than a
"handle". I can understand the reason why many people didn't use call
signs on CB when they had them, because it's stupid to run illegally,
and then give out your call sign, which is an invitation to come and get
me. But if you're running legally on ham it's no big deal.

As for formality, that depends on the people in your area. I'm lucky that there are a bunch of loose, fun loving guys that clown around and don't take the hobby THAT seriously. We do what we can within the rules, and there is a LOT of latitude.

>
> 2. CB is more diverse (More CB radios mean more individual personalities involved, good and bad)

Agreed. But it's double edged sword. Easier to get on, means that for every unique interesting person you find, there are at least as many low-life dirt bags. Working for a ham ticket, may scare away the casual talkers, but it also keeps the riff-raff at bay, and allows those of us there, to have virtually interference free QSO's.

>
> 3. CB costs less

Maybe. But not always. It depends on what you want, where you are, and how lucky you can get. You can get on 2 meters with less than $100 if you're willing to buy used gear. And modified CB's will work on 10 meters.

> 4. CB is less likely to be monitored by someone who thinks they were knighted a radio cop.

Hams that "police" the bands do so because they want to preserve the order that is there. They know what CB is like, and don't want the hams bands to go the same way. I approve of monitoring for ILLEGAL operation, but those guys that try to censor CONTENT, go a little too far. Fortunately, I don't see much of that (Since I stopped using packet, that is).

Cbers, that can't handle a little restraint and radio discipline, are probably better off not becoming hams, since you will likely turn off many people.

>
> 5. CB is time tested. The CB band behavior hasnt really changed in the past 30 years. Look whats going on right now on the Ham bands. (eg 20 and 75 meters)

This I disagree with. I've been on CB for the better part of 30 years, and I can say unequivocally, that the bands have gotten MUCH worse. In the early to middle 70's, unless someone was really drunk or pissed off, you never heard anyone swear on the air. There weren't many "noise toys", people generally respected other people, and managed to co-exist peacefully. There were a few clowns and agitators, but they were much fewer than they are now. Power amps were also not in big demand, and if you had 100 watts your were king of the mountain.

But the degradation of both the CB and Ham bands is mostly a reflection
of our declining moral standards as a society. Radio is merely a mirror
of society in general.

>
> 6. CB equipment is much more easily acquired. (Theres more Radio Shacks than
> there are HRO's)

True, but I consider that a plus. If every K-Mart sold ham radios,
there'd be more bootleggers.

>
> 7. CBers are much more open to different opinions. (Try going on 80 meters
> and openly advertise that you are
> a Democrat, you'll be ripped to shreds)

Try telling a "good buddy" that his echo mike sounds like dirt, and see
how he responds.

>

> the QSO by virtue of the common ground created by the HAM license. With CB,
> you get what you get, sometimes bad, but always diverse.

Agreed. Some of my most favorite friends on CB were totally non
technical. And let's be perfectly honest, there are more women on CB as
well ;)

This is why I stay connected with CB. I've always had more fun on CB
than ham. But ham radio fills the bill when the CB becomes too
intolerable. It's a "safety valve", to quench my radio hunger, when Cb
can't cut it. But as a long time Cber, I despise what is happening on
the band. I want it to be like it was in 1975. It's probably not going
to happen. Society has changed too much for that.

> Recruiting people for CB is no different from recruiting people for ham.

Well, as they say in the real world, "you get what you pay for". CB is
easy to get on, you can find many different kinds of people. But you

have to deal with the undesirables as well as the friendlies. Ham radio requires more work, but you get the benefit of less interference, and more reliable communications over longer distances. One of the local 6 meter repeaters has a 100 mile radius coverage area. I can't do that reliably on CB. Our 220 repeater covers from my house down to the Chesapeake bay, where I boat (100+ miles) If the wife needs me, she can get me. I couldn't do that with CB.

> Radio.

Legally, that is untrue. But even disregarding part 95, there are still things that you can't do (well) on CB. You can't have reliable long range local communications, since the band is subject to DX, and man-made interference. You can't experiment with high tech modes, unless you can find another CB "techie" to play radio with. The frequency band limits the practical size of the antennas that you can run. I've got a 2 meter beam with an 18 dbd gain. For a CB antenna to have the same gain, it would have to be over 100 feet long.

So..... What you're saying in essence is that since we have this crime
and that crime, that we should all throw in the towel, and give up? The
heck with trying to better ourselves? Yea, maybe we can't stop drugs.
Maybe we can't stop violence. But we CAN make a difference in how we
treat people. Why do you think there is so much violence? People just
snub each other. If we took the time to be a little more friendly, maybe
the other guy would reciprocate.

I just love defeatist attitudes.......

John D. Kasupski, KC2FNG, KNY2VS wrote in message And let's see you
calculate the
>voltage drop in THAT conductor (thin air).
There is no voltage drop in that, and you will not kill file me, you are to
interested in what I say smart ass, you still have not shown the answer to
the equation, And your hourly income does not impress me, that is merely
chump change to me.
And I still would like to see you solve the equation (in a simple manner).
you do not need any charts to solve this equation, all the specs are there

you simply need to rely on your ohms law pie, what more do you need? and I like the way you tried to clean it up with the one way circuit attempt, give me a break. You are once again feeling inferior to CBer's, which is a frail attempt but at least your trying. Man you dont have a man in your family if you cannot show the answer to this simple equation smart man.

P.S. don't use the kill file cop out so you dont have to answer the equation, don't be afraid to make mistakes everyone does from time to time. This kinda proves the theory of "Its better to be silent and thought of as a fool,
 than to speak and prove its true" especially by a bunch of dUmB oLe cBeRz!

When I talk about cleaning up CB, I've checked my ticket at the door. I
am speaking as A CBER. Why is it so hard for you to accept that there
are other CBers, who don't like the way you lawless guys run? It's not
just the hams. In fact the only hams that care are the ones (like me)
who grew up on CB and still use it (When it's not overrun by morons).

You try to deflect the real issue by creating an enemy (hams) to rally
against. But the truth remains. There are people (CBers) that are
getting sick and tired of having to deal with self-centered, arrogant,
anti-social people, who care nothing for the rights of other Cbers, and
who openly flaunt it, as some sort of invitation to "do something about
it". I don't know what abuse they've had to take as a child, but I, and
other people, don't need to deal with the after effects. If you want a
toy, go buy a Nintendo. Radio is to communicate with.

This is exactly the reasons that I left (or reduced) my CB activity. I
didn't leave because people run amplifiers or freeband. I left because
it got to the point that you could have a decent conversation with
someone, without some mental midget jumping in trying to aggravate you.
Or other people, who's sole activity on the band was to announce, to

anyone unfortunate enough to hear them, just how great they thought they were, and how much better they were than the "mud ducks" out there.

No, the problem transcends Cb radio. The problem is in society itself. If you live near major cities, it's probably worse than if you live out in the "sticks". The problem will most likely not get any better unless something radical happens to change people's attitudes. The FCC can start busting a few people, but the great majority of A**holes, will still be out there spoiling it for everyone else.

Hey, I don't know if you're talking at night or day, but the conditions have been terrible for local talking the past few days. If you are trying in the day, try talking at night, after all that hash and trash dies down, then see what happens. Good luck.......

I wish harry was around here, I'd send
him a nice Cuban Robusto for a great informative post.

On the other side of the spectrum, Larry Ellison
(CEO of Oracle) wants to have the laws on flying
into San Jose International after 11:30pm. changed. I quote
"that's a stupid law, no one can tell me when and where
I can fly" But the city said, " the laws the law, no
matter how rich the individual is" $100.00 says he gets
the law changed.

I don't let anyone tell me how to speak. As long as I abide by the rules, the content of my transmission will be in MY style. At one time, I'm sure that this "nonconformist" attitude, would have gotten me black-balled, by the "HI HI" hams, but I'm lucky that we now have a good amount of upgraded former Cbers, that aren't so rigid.

So much for friendly. You happened to get involved with self-important assholes. Not all hams are like that. Steer clear of the "public service" types. They're the ones that couldn't become a cop, so they're trying to live their life as "Sgt. Joe Communicator", complete with a bad attitude.

>
> So, fuck them. That is the general attitude of the ARS community in the

Right there, you can see the difference between communities. It's the same on CB. Some areas, are ok, and others are choked with idiots.

>

I do that now on 2 meters, 220 and 6 meters. Again, I guess it all
depends on your area.

>

"5 landers" are tough. They seem to be very "cliquish". It's hard to get
into their HF roundtables. As a "yankee", it's even tougher.

>
> You can easily
> > recruit a group of friends to 2 meters or 6 meters, and have a ton of

A 4 watt CB and a cheap antenna maybe. But I'm sure what you spent on
your gear is at least equivalent to a typical ham station.

I have always loved when operating on repeaters
that you paid, and we're authorized to use. You
some how pissed the owner of the repeater off, I
mean by experience, said something wrong, didn't give
you're sign often enough for his liking, made a joke
that he didn't like, talking with loud baby in
background, just plain better person than him, and
such. So what does he do, turns it off.......
What a fucking dick. But that's ok, I have programs
that crack the codes so that I can use it, or any other
when I want.

(not aimed at jeff)
I can always talk skip on SSB. There is no challenge in that. Kaputski can use all kinds of clear frequencies, have a band to skip on 24 hours a day, use all kinds of modes and power to his heart's content; but would rather waste his time whining about a two pill mobile talking skip on regular 40 CH AM. When I'm shooting skip, there is too much noise to talk local, and all the locals turn it off because you

can't talk to anybody local anyway. As far as wiping out a local, I know what channels are used in my area. In an urban setting, if you can't hear any neighbors on your radio with an S30 noise level, you turn on the stereo or shoot some skip.

Late at night, when it's quiet out, it's much more exciting to hear the local idiots cuss and fight than listen to some stiff shirt on a VHF/UHF repeater. It's also more fun than the crap on 3910 or 14313, if just for shock value!

Maybe one night I'll tape some and put it on RealAudio and you can tell me if you've ever had this much fun on radio!

Hey guys and gals I got it working my uncle helped me rigged it but now I have a nether problem I need a mic my other mic was stolen a couple of months ago I need another one so if any of you have a mic that you dot need or would like to sell let me know I can only go about 10-20 the mic I had was a standing mic with 2 buttons 1 talk and the other lock if you have any like this or know a good website I can go to get some please let me know

Thanx Corey Davis
P.S the mic has to have a 5 pin plug and work for a Realistic

Ok here is my setup. I have a Cobra 29WXST with a K40 antenna mounted via magnet style to the roof of my car. It a 4 watt radio so I have alway used the 1 watt per mile gauge. But after reading some of the postings I think I might be under estimating it a bit. Right now I have to tuned pretty close to an exact match with the antenna. I get around 2 1/2 miles of range which seems like I am getting the short end of the stick when is comes to the range of my radio. So thinking this I took it to a CB shop and had it checked out. After $20.00 the guy told me the radio is working fine. So is it? I know someone will have two cents to add right?

On Thu, 28 Oct 1999 13:34:05 -0500, "DR KAVORKIAN" <32pills@yahoo.com> wrote:

>Don't quote books, since you feel so smart calculate the equation, and let
>us see how smart you really are, its obvious YOU think your very bright,
>well prove it.

I'll perform NEC calculations for you when you pay me $22.50 an hour to do so. That's what my employer pays me, that's what you can pay me, otherwise do it yourself or find someone else who is dumb enough to work for nothing.Otherwise, I have better things to do with my time.

Your original statement was:

>>>Lets just see how smart you really are, I bet you cannot answer this or
>even
>>>reply to it dumbass.

Well, I did reply to it, and replied with the correct equation that one would use to perform the calculation - IF, that is, I were interested in playing your stupid little game, which I am not. I've demonstrated that I have the necessary knowledge, that is as far as I care to indulge in your nonsense...and anybody in this NG with the intelligence to understand the subject can see that.

Face it, Kadorkyman, you attempted to pose a question I couldn't answer. Your attempt failed. You thought I would have not even the slightest clue of how to proceed with your question, and instead I came up with the exact formula used to perform calculations of that nature, and you can't handle it...so now you are reduced to whining and sniveling and trying to change the subject and gripe about parameters YOU specified in the first place.

I knew EXACTLY how that problem would be solved. I just don't have ampacity charts handy, nor specs on the cross-sectional diameter for various sizes of conductor. If you want to pay me the going rate, I'll make the effort to hunt down that information and give you your answer. Otherwise, go take a long walk off a short pier.

You belong in the kill file with Headless Harry.

>incandescent lamp. and explain to me how you would get a one-way circuit to

>work.

In this example, we don't, we merely specify that we use the one-way circuit length in feet for the value of I to eliminate the possibility that some lamebrain like you would double the length of the conductor to compensate for the fact that the current flows in the opposite direction every half-phase...which would be incorrect since we have the 2 multiplier in the equation - as you yourself pointed out in your next sentence, nitwit.

> The 2 at the beginning of this calculation is for there and back
>calculation.

However, just for the record, a one-way circuit is not out of the question. Ever looked at an infrared remote control circuit? You point the optional IR remote control at your Drake R8B receiver, you push the POWER button, and voila! The radio comes on! Ah, the wonders of modern science, eh, Kadorkyman? And let's see you calculate the voltage drop in THAT conductor (thin air).

73 and good DX'ing,
John D. Kasupski

i agree with you.
hypothetically speaking, if you were to look me up through
1-800-search.com,there would be some trackable trail involved as to your e-mail
address.
if i were a threat to a ham, i've got my $1.00 call cd and a set of numbers and
off i go.
no trail, total anonimity. come and go in the night without a trace.
i'm not trying to scare anyone but this could be a very real senario that could
happen if a nut had gotten hold of a similar cd. i'm no savior or anything but
think about it.

Well, I'm not sure yet whether getting my ham ticket was a mistake or not, it just wasn't what I had planned for that day. Now that I have a no-code tech, I am starting to learn the code, though. As the saying goes, when in Rome, do as the Romans do....

>just barely passed the code.though....by the way I also got a Sonar
>endorsment. why? because it was only one chapter in the book and I was
>bored the night before the test.   man thats just what i needed, a sonar
>endorsment in N.W. Arkansas ha ha...

Well, you never know. I used to know a guy who lived in Florida who had a radar certification that he never used. Six years later he moved to Kansas, started looking for a job, and ended up landing a position with Cessna Corp. who hired him primarily because he had the radar endorsement and they needed someone with knowledge in that area. Now he has the best job he's had in his life, and all because of a piece of paper he spent six years believing was useless.

It never hurts to learn something, even if you think you'll never use it. That's why I'm currently working on learning the code...I have no interest in it now, but then, prior to September 18, I had no interest in ham radio either, and now I have a ticket. You never know.....

this proves my point to a tee. the ham / rf police get on and start with their
smart, read dumb, ass condemnations about out-banders instead of trying to
"elmer" them into compliance in the spirit of a true ham.
then to top that off, you have a "good dxing" wish after every post and promote
these activities.
you need to get your shit together as to which way you are going and stop
giving the REAL ham elmers a bad reputation.
jeff

sounds like the "former" is a little out of place and may still apply.
just out of curiosity, does "frustration station" mean that rick may have caused some frustration in his cb days?
i don't know, i'm just asking.

>
>And there is is in a nutshell. It's not the amps. It's not the freeband.
>It's the ATTITUDE.

exactly!!! it's the ham / rf police attitude here that gets such a negative response from the cb'ers.
it has been written on this ng that some hams left cb because it has become a "sewer".
if this is the case, then stay off from cb and this ng and allow us to wallow in our sewer until it splashes into 10 meters. then, and only then, do you have the right to come in with a mop and clean things up.
hams have so much unused spectrum that they could use instead of tuning into the sewer but they don't until some commerical interest threatens a piece of that spectrum,then they rally around the flag like the first patriots to defend it to the death. all we are allowed is 450 khz of spectrum and you feel the need to crowd in here with us.
is there something here that you want that your not getting on your own spectrum or are you just here to stir up the shit on the bottom of the pot?

>If your first reaction to this post is to say "F* you",
>then you have it and are part of the problem.
>
here we go again with a ham trying to control us and what we say.

if i were to say "F" you to you, it would not be for your definition of part 95 as it is essentially right. it would be for your, and other like minded hams, trying to control us with threats of turning posts and e-mailings over to the fcc and other such things.
the fcc couldn't do anything with them as there is no law / rule against publicly speaking about radio mods or linear amps. the first amendment guarantees this. this is why you can openly buy instruction books on the subject. otherwise the fcc would be guilty of censorship. first amendment strikes again.
the big shame is the people who worry over these bullshit scare tactics that the hams try to bully us with because they don't know their constitutional rights enough to know that the rf police are just blowing smoke from a shit fire.
>
>There is a good passage in the bible that basically says to do on to
>others, as you would have them do onto you. If people would respect the
>rights of others, and not be so self absorbed, and self centered, then
>there wouldn't be this mess on CB

this is also true of the self-centered hams out there who think they have a God given right to control other peoples lives.
slavery is also in the Bible but if someone tries to enslave me, one of us is going to die.
this is not a threat to you or anyone else but a demonstration of my right NOT to be controlled by someone who has ZERO authority to do so.
an amateur license ONLY gives one the authority to communicate over amateur frequencies and, to a certain extent, police THOSE frequencies.
nowhere is it written that a ham can police cb other than those remidies afforded any other citizen which is to complain to the fcc directly.
bitching here on this ng will get you nowhere as you are on the wrong turf.
jeff

if 40 channels is so limiting, why are you here in the first place.
maybe some find am dx challenging.
apparently a challenge you're not up to.
just like sucessful physically challenged people. they don't stop at their limits, they learn to use what they have to the fullest. just like am dx on cb. instead of sitting back in the ole' easy chair and letting the repeater do all of your work for you, get on and try it some time. you may find it interesting while standing on your own two finals.

>
>Remember, for every yahoo that you try to work skip with, you are
>interfering with local communications in both your area, and the areas
>that you "skip" to.
>

and while we're on the subject of skip, if you and i are 5 blocks apart and you are talking local and i'm talking skip on two different channels and the skip is rolling at that time, you too will be interfering with someone at the same distance that i'm getting on the same channel as the one you are talking on. it happens to all of us, even at four watts out. skip is like an explosion. it goes off in all directions and, unless you have a beam, it's impossible to control. then with a beam, you're going to interfere with someone because your efective radiated power is much higher even with a four watt feed.
i've seen times during the last solar max where i couldn't hardly get across

the street but when i cq'd the interfering station and exchanges of qth and
equipment reports, many times they would be way beyond the 125 mile limit and
barefoot to.
remember, during hot skip, you almost have to call break channel across the
continent to be TOTALLY courtious to everyone on the channel.
under these circumstances, your arguement is a moot point.

to be honest, i have to agree with this post but just as a point of fact, if all of the gutter mouths, linears and all of the other things that you find objectionable were to disappear tonight, the band would never be as it once was because of the proliferation of inexpensive cb's that flooded the market.
the first cb that i actually owned, i bought back in 1972. it was a 2 watt, 3 channel midland walkie talkie and, yes, i didn't have a license to use it then either.
i paid as much for it new as a low / mid grade rad shack mobile costs now.
the comparativly high cost of a cb then coupled with the requirement of a license kept the population low back then.
now, since they dropped the license requirement, there is a chicken AND a cb in every pot. on top of all of this, we are comming up on another solar max, even at 4 watts, and if the predictions hold true, skip will make the "legal 40" unbareable again.

then we are all children. in case you wern't reading the war that was going on
for the past several months, i had several admitted hams attack me with
generalizations and, as you put it, mudslinging.
i retaliated in kind in harsh ways. some mud of my own but more with legitiment
questions that they would not / could not answer because either they had no
answer or the answer would force them to admit that they were wrong or to admit
that they had ZERO authority to come here and tell anybody what to do.
they either didn't have the balls to answer the questions presented, totally
ignored them or side-stepped the issue all together.
from what you are saying, if someone "shoots at me" and i shoot back, i'm
wrong. if i lay down for them like a "good little boy" it's all right???
I THINK NOT!!! that shit's for the birds.

>Who started it is irrelevant. It takes a much bigger person, to just say
>"Sure, whatever you say" and go about your business.

that's what most of Europe said to hitler.>The one sure thing about the human
race is that we're all different in
>one way or another.

this is true, so leave us in peace with our opinions and we'll leave you and
your 10 ham-related ng's to your opinions.

>But as long as what you are defending is
>purely subjective in nature, then you have no more "rights" than the
>other guy does. It's all based on opinions. We all have them, and
>they're all equally valid or invalid

bulls eye. this is what i've been trying to get across to the rf police for 6
months now.
it is OUR opinion that what WE do on OUR band is OUR business and has validity
for US and what YOU do on YOUR bands is YOUR business and has validity for YOU.
WE don't have a right to tell YOU how to run YOUR lives and in turn YOU don't
have a right to tell US how to run OUR lives either. YOUR opinion, to US, is
invalid and OUR opinion, to YOU is invalad. inother words, stalemate except you
are on a CB news group where these things are going to be discussed. if you
want to bitch about it to agreeable ears, go to one of your other ten
ham-related ng's and bitch there.
if you haven't noticed, nobody here is really listening to what you have to
say. we are just wasting a lot of time fending off butt-inski's like you who
spam this ng with a bunch of shit that no one here is interested in hearing
except those of like mind to yourself.
it's like the situation of someone throwing a party and the crasher gets
ignored. usually, the unwelcome ones get the hint and leave but the rf police

are like the energizer bunny. they just keep going on, and on, and on...

>Someday, that "dork" may save your life, or may be the guy you have to
>interview with for a job, or to get a mortgage at the bank.

i'd rather jump or live in a cardboard box than work for someone like this.
not so much the "dork" part, but i really have a hard time staying around
someone who thinks they have the authority to control personal aspects of my
life. my boss can control my work related time, my mortgage holder can control
when i send in my payments, and i would be grateful to the guy who saved my
life but not enough to kiss any of there asses over my personal time or
activities.

Your freq counter is designed to shut off when the the switch is in the NB+
position.
Locate C49 which is in the back left corner next to TR17. Unsolder both leads of
C49 and resolder the cap flush to the pc board. The leads are too long on C49
and can cause the 20+ noise signal you are seeing.

<<what in that comment makes it so obvious i know nothing?>>

Let me repeat: I said that "it's obvious you know nothing of HF propagation". Sitting on 3.950 and 14.313 just waiting to hear off color language and bad behavior will give you a very narrow view of what the ham bands are actually capable of, and will teach you nothing about propagation.

<< as a life long shortwave listener and general radio hobbiest i know a little. are you denying that 14313 is full of ass holes cussing during the day>>

Truth is you really gotta be a dedicated 24/7 listener to catch the antics of the few troublemakers on 14.313. (But maybe that is what you are looking for??) Most of the day 14.313 is "full" of maritime mobile stations and routine net operations.

<<or are you denying the fact that 40 meters is full of annoying ass shortwave stations or are you denying both???>>>

DSP auto notch works magic on SW heterodynes. 40 is a geat band. Guess you wouldn't have known that, since you don't actually *use* 40 meters.

No, I was passed this URL by a fella over you're way who I'm
corresponding with regards a class-S PWM modulator for this class-E PA
we've finished.
```

True to Raab's design we've now seen 700+ watts at 100v with 92.5% efficiency!

All you need now is some FET's that do the same job at 27MHz.

With few exceptions, all Realistic CB's use the same mic. See
http://www.copper.com/mics/Realistic.html
for details. In the 2000 catalog I see:
Dynamic mic 21-1172 19.99
Noise cancelling 21-1177 29.99 (not worth it)

Best thing is to wait until Saturday and/or Sunday and hit flea
markets and yard sales. Hamfests after that. Be prepared to see
funny looking people with many antennas sticking out from their
bodies <: I've picked up several D-104's for $10. You might find
a complete classic base station for peanuts. Just wipe off the dust!

TUBES AVAILABLE

I currently have over 300,000 tubes in stock.  Have a good selection of both
new and used/tested tubes for audio, CB & HAM radio, TV, CRT use.
Sorry I do not have a  Web Site nor a price list.  Suggest that you Email or
```

Fax me with the tubes that you are looking for along with the quantify of each needed. I will check my inventory and advise you of current availability and cost.
In addition, I also have a very good selection of tube testers, tube caddies and good used CB/HAM equipment. Please contact me regarding you needs.
Thank you for your consideration.

Amplifiers are nothing more than sophistocated power converters.

For example, most all of them convert simple DC power to complex AC power.

Efficiency relates to what is lost in the convertion. For example, lets say a particular amplifier draws 10 amps at 10 volts DC. That amounts to 100 watts that's DRAWN by the amp. The output of the amp in our example will be less than 100 watts because some of the power is LOST in the conversion from DC to AC. In most cases a 50 to 70 percent conversion is all that can be expected. That means that out of the 100 watts of input power only 50 to 70 watts of output power will be realized. The rest is wasted as heat in the convertion process.

It all amounts to simple mathmatics. If you can understand the concept of output power versus input power based on the efficiency factor, you're ahead of the game.

```

Mr. Stewart,
I agree we all have to be responsible and accountable for our own actions. I don't think I said the FCC is foolish but they are under-staffed. Some of the "Guests" in this NG refer to Mr. Hollingsworth as a Messiah. To each his own. I feel as long as you are on record with the FCC you are subject to a good deal more scrutiny and issues with other Amateurs. I may be looking at this wrong but if I were to talk out-of-band today and, you tell me I shouldn't do that and explain why, haven't you done your job? Anything after that is crying.

Without rigid policing (both self-policing and policing by the
> FCC), a misguided person, out for mischief, could cause a lot of serious
> problems for a large number of people, including those on other radio
services.
>
>   Therefore, it is not as simple as "turn it off or change the channel."

> entrusted to us by our government, and the governments of other
> countries around the world.

This is where I have another problem. I can see the tarnished image not only in the rate of growth of ARS but also in the quality of it's operators. Where I live it is the same as CB. I still hear Profanity, fights, racism,

jamming, deliberate destruction of someone's equipment (Someone over-heated
a repeater?!) and excessive power. I don't think this "Policing" thing is
very effective. You see, Mr. Stewart, your side of the street is still
dirty. If it is not working in ARS how will it work on CB? Every 3 months
or so someone I know somewhere in the country gets busted. At that rate we
would not live to see many of the channels and stations cleaned-up.

Hey Dave,
I don't live in a lab. I live in the real world. This is 1999. ARS is not
exempt from the type of news we get everyday. Come on man, wake up!

131, In general amps, of a given type will exhibit similar
efficiencies. Class C amps are the most efficient in terms of power,
but are non-linear. Not really good for AM or SSB, but fine for FM.
Class A amps are the least efficient in terms of power but are the best
in terms of linearity. Most compromise and run Class AB or AB1.

I agree with the very last part of this statment, thats why I am on C.B dill wadd and not a Ham. Get over it.......

 Most ham operators understand, and accept, that
>responsibility fully. If you cannot accept responsibility, I strongly
>urge you to stay out of ham radio.

Bill,
>That's brave talk--too bad Phil lost himself in the mire of 160.

What's brave, the figures or 160?

I thought they'd closed down LORAN navigation system?

Now even you can here my mobile on top band.

Just pick your time as long as propagation's switched on.

I have no command over band conditions, unlike some of the ch 6 op's.

Phil / UK

For sale : one year old 40 channel CB radios,have been used lightly.IN PERFECT CONDITION. Handheld. They are Radio Shack TRC-225,to anyone who might know what those are. They have removable antennas, volume control knob,a high/low power switch, and a squelch knob.Digital channel selection buttons. Lights indicating low battery and talk use Feature a bright green LED display which can even be dimmed to conserve battery power. The two radios are identical and operate at 5 watts. I bought them during a storewide sale for $80 each. I will sell the pair for $ 100.

For sale : one year old 40 channel CB radios,have been used lightly.IN PERFECT CONDITION. Handheld. They are Radio Shack TRC-225,to anyone who might know what those are. They have removable antennas, volume control knob,a high/low power switch, and a squelch knob.Digital channel selection buttons. Lights indicating low battery and talk use Feature a bright green LED display which can even be dimmed to conserve battery power. The two radios are identical and operate at 5 watts. I bought them during a storewide sale for $80 each. I will sell the pair for $ 100. That includes shipping.

Email me if interested : cptnben@g

Its not so much the call sign per se, its the timed identification requirement itself. We have some characters on the Ham bands up where I live that will actually tell a person when their 10 minute ID period has been exceeded.

> > 2. CB is more diverse (More CB radios mean more individual personalities

Dave, the KEY word in your statement is the word "MAY". All the Ham ticket does is seperate those with a desire for some sort of electronic education. It does nothing for skimming personalities. Hell, the Tech License itself is 70% FCC Rules/Regs and 20% Practical electronics. No-one has ever walked away with a Tech ticket and was able to build a radio from scratch. Much more individual in-depth research would have to be done on the Tech licensees part in order to accomplish this endeavor. It is a fact that the Ham ticket does not weed out arrogance.

I would rather have fun with a jovial CBer who knew very little electronics than I would a smart-assed, opinionated Extra who could build a world class radio.

> > 3. CB costs less

But not everyone can have access to 2 meters and 10 meters (Legally). My point was that in about 2 hours a 12 years old kid can have a CB station up and running for about $100 with a quick stop-over at Radio Shack.

> Fortunately, I don't see much of that (Since I stopped using packet,
> that is).

This Newsgroup is a prime example of my previous comments. A Ham on this
group (who has already been identified) started cross-posting CB amplifier
issues on the rec.radio.amateur.policy newsgroup knowing full well that this
dialogue would irritate some individuals on that group (It takes that
personality to know that personality). Then, all the Radio Rambos showed up
here with their swords swinging.

Hams have ALWAYS had the tendency to believe that CBers are subordinate to
them and it is up to them (Hams) to have a quasi-authority to enforse such
rules

> you had 100 watts your were king of the mountain.

In 1970 you couldnt ride down any street in my nieghborhood without seeing
at least 5 CB antennas. For every 5 CB antennas there was 1 that had a "HAM
supplied" amp hooked up to it. It wasnt the CBers who started selling all of
those D&A and Swan amps to other CBers.........it was Hams.

Now, I can count on 1 hand how many CB antennas there are within a 1/2 mile
radius of my house. Noise toys are more prevelent than there used to be
however there are less CB operators (at least where I live). Years ago just
about all 23 channels were dominated by individual groups within a 10 mile
radius of my location which made for some interesting
conflicts......................At present there are about 11 channels out of
40 used by locals.

Yes but that same "Good Buddy" wont be taken very seriously by the FCC if he
decides to complain about the dialogue taken on that particular CB channel.
The FCC is currently conducting an investigation on 75 meters because of the
opinions generated by some Hams that other Hams dont agree with.

There is no arguing that there are some physical benefits to the frequencies
used by Amateurs in relation to the CB frequencies

Legally, you're right, however from a reality standpoint I beg to differ. I
work US and European Packet up in the Freeband all of the time as well as
phone FM and SSB. I even have a Yaesu radio that can act as an FM repeater
on 11 meters (If I wanted it to). The only thing I haven't done on a
consistent basis on CB is CW. This is because I haven't found anyone out
there to respond back to me while using CW on CB.

I actually prefer running a QRP station however I don't fault those that
decide they want to run power on 11 meters. As far as the Freeband goes, I
love it. Its not legal however, most individuals using the Freeband are
those who aren't the types with the noise-toys and such. They just want to
make a contact.

>
>> Yep, that is the cb attitude, which explains why 11 meters is the
>sewer
>> pit of radio.

well, then tell us oh great oricle, why are you and other like minded people
here invading our "sewer pit"?
hams have so much unused spectrum out there and you have to crowd into our 450
khz sewer.
you should be out there defending your own turf before UPS tries to invade it
again instead of crawling into our "sewer" and crashing our party.
if our "sewer" smells so bad, KEEP YOUR NOSE OUT OF IT AND GET BACK TO YOUR OWN
SPECTRUM!!!
what, in\sn't several hundred mhz of spectrum enough for you???
or are you just jealous that our massive 450 khz spot got taken away from you?
how petty and pitiful.
jeff

Hello,
I am in need of some help on this radio. It will transmit on AM,and SSB
real good. The receive on SSB is okay. The problem is no Receive on AM.
I have checked all of the IF amps and just abot everything else connected to
these transistors. If anyone has a solution to this problem, please reply to
me at this address.hwroger@interkan.net.
Thanks In Advance
Roger Harris

With sun spots the way that they are right now and the noise that it
creates, you are doing good to maybe get a 1 1/2 to 2 miles during the

day on the regular 40. At night there is no problem because the noise
goes away. Other channels besides the regular 40 is a different story
altogether.

.
if some people feel the it is there right to trash the CB band then i have a right
to trash the newsgroup so quit your whining because as long as the cb band is
trashed i will try to promote legal operation and trash any person talking about
doing illegal activities

do you all you free banders and illegal amp runners comprehend that
or has you 100kw+ amp fried what was left of your small little brains

you might have ran us of the cb band but you are not going to drive us
off the newsgroup

73,s DE N9WOS

The splatter boxes mumble
The splatter boxes hiss
The splatter boxes crackle
The splatter boxes torment
The splatter boxes bleed
And above all
The splatter boxes splatter
Day after day they clutter the band

And destroy the usefulness of it
Please spread the word of the
CBAA (Citizens banders against amps)
And
NAI (No amps international

Galaxy 88 CB Radio!! 10/11 meter bands. This radio has rogerbeep, echo,
reverb, talkback, +10khz Switch, as well as high power output. A Great radio
to AM chat or SSB Skip talking! Dont settle for those cheap, small radios.
Get one that will out-talk them all. So many channels to chose from you
won't know where to go:) Email me if you have any questions.

FOR SALE ON EBAY!!   RESERVE ALREADY REACHED!!

just received this e-mail today from my server..

Subject: FW: Virus alert

Just an fyi......

We have been informed of a new virus - WOBBLER.
It will arrive on e-mail titled CALIFORNIA.
IBM and AOL have announced that it is very powerful, more so than
Melissa, there is no remedy. It will eat all your information on the hard
drive and also destroys Netscape Navigator and Microsoft Internet Explorer.
Do not open anything with this title and please pass this message on to all
your contacts and anyone who uses your e-mail facility. Not many people
seem to know about this yet so propagate it as fast as possible.

dave

My needle on my dosy TC 4001p is sticking really bad.  I have tried anti
static spray and cant get it right.  Sometimes it wont go down all the way
and then it will only show half as many watts as I know im putting out.
Sometimes the needle will stick half way or straight up the middle.  This is
making me man as hell.  What do I do guys.

Ken

I have an I-MAX2000 in my pine tree about 85 feet in the air. To strap the pole up there I used plumbers strap. I also use the mini 8U gray coax I have ran up to 3,500 watts through the coax and my antenna and never have had a problem. The pole is 21 feet of black cast iron pipe that has never bent we had 80 mph winds and the antenna just blew around and the pole rocked back and forth I climbed the tree the next day and everything was still as tight as can be. So thats what I did it's up to you.

Jeanette Robison wrote:
Rob,
I went to the site that you recommended for the FCC License preparation

class. I was a bench tech, working in cellular. My employer required an FCC General Radiotelephone Operator License to get a promotion to management. I saw your post and went to

http://www.ddcommunications.homepage.com

You were right! I was able to get the study manual at a killer price. Then I used their online practice exams. I did good on the online exams so I called the company. They came to my workplace, gave a 1 hour class, then administered the Element 1 test. I PASSED!!!! Then another 1 hour class (Element 3), I PASSED AGAIN. Everyone of us (5) passed the test (some of the guys hadn't even studied before, the class was that good!!!!!!! 3 of us were offered the Radar Endorcement, so what the heck, we did the class and passed it too! BEST OF ALL, THEY WERE THE LOWEST PRICES OF ALL OF THE PREPARATION COURSES, AND ONLY TOOK 1 DAY, NOT 2-6 DAYS!!!!
Im going to take the GMDSS maintainer class next Saturday just to get the license!!!! (It'll look good on my resume).
Anyway, thanks Rob for mentioning your success with them. Now I have my license, and the respect it brings...
Take Care,
Jeanette Robison

I think you are correct about not getting the range you should.The
K-40 is a fair antenna but I distrust mag-mounts.
I think 10 miles should be a piece of cake on AM and much more on SSB.

The K-40 is just second to the Wilson
1000. It is a good antenna though. It needs
to be mounted on the CENTER of your ROOF to be effective as you want. The guy
who took your $20 should have taken $10
more and clipped and peaked that radio for you. It will swing 12 watts When
there is moderate to no skip you will do 10-12 miles with on problem. The
Wilson would be a little better, but I would'nt dump
it and buy the Wilson, for the difference will
not justify the cost. 73's and have fun, Lou

I was at rat shack today just browsing to see what was new and I got a 2000 catalog. So I was flipping through it to see what was new and turned the page and saw a base station. At first I thought this was really weird because I saw SSB and it surprised me that rat shack would come back out with a new ssb radio...then I looked closer and realized it was a uniden washington. They also have a new radio that has the same style switches and buttons as the trc-485 but it is 10 meter radio. It also has cooling fins on the back...I'm wondering if it's gonna be a radio that can be modified like just about any of the radios being sold as 10 meter radios can. I don't like radio shack radios but it's suprising to me that they would come out with something new like that.
-Jack

I have for sale a 98% complete set of original SAMS Photofact CB Series
manuals from #1 to #292 in excellent condition. Missing numbers are:
108, 152, 208, 212, 216, 221, 225, 230, 236, 244, 259, 264, 270, 271,
273, 274, 281, 284, 286, 289-291.
Price is $650.00 (or offer) for the set (I will not divide), and I will
pay shipping to anywhere in the U.S. Thats around $2.00 a book (thats
less than repro costs), and thats IF you can find them. If interested,
I can be contacted at: usmc@pcisys.net
Thanks
Paul

The output section of most AM CBs is actually Class C. However, the supply voltage to the final is "modulated" by the audio amplifier and the resultant output is, not too surprisingly, AM. This way the output transistor is operating most efficiently.

Yes, the tech plus and tech license did do some good. I even know a couple generals that grew up from the ranks of CBer.

I have been licensed for nearly 10 years (shit, time to renew almost!), and I know what is out their. Texas sucks, at least around here.

However, I have been in arguments with people from this newsgroup, licensed, that did grow into respectable acquiantences, that I would talk to (never did get that 6 meter station up, though).

They don't live in Houston, though.

> Right there, you can see the difference between communities. It's the
> same on CB. Some areas, are ok, and others are choked with idiots.
>

This was nothing new to me. I have been across the US 3 times in my life, been to every state, sans Alaska, and toured half of Canada. All before I ever left the roost, so to speak. I know that their are some areas that are full of pukes, and Houston seems to have them.

But, on the flip side, I have found the CB operators here to be EXTREMELY friendly, drug free (which is a REAL rarity), family people who bend over backwards to help.

Go figure.

> >
> "5 landers" are tough. They seem to be very "cliquish". It's hard to get

Yes, that is all true. I do carry a large stick, in the form of Eimac
Steel, though. When you can't get friendship, I have found it best to
command respect.

At least the other two hams in my subdivision talk to me now. Amazing when
you show the two advanced ops that you can build an amplifier, and they are
using appliances.

One of them built a SB220 back in the day, though. Still sits in his
garage.

> > >>>>Yes, just like I have on CB. And it costs less, too.
>

>

Yes, it sure it.

Rig	TS440SAT
Driver	SB220
Big Box	3CX(guess)

Driver under construction 4CX1000A

That is what I run. And a Johnson Viking Valiant or a DX-100 Heathkit at
other times.

>here invading our "sewer pit"?

You don't seem to understand who invaded who, or what. Let me spell it out for you and the rest of your buddies in this NG.

Back when *I* first became active on the CB band there were 23 channels, you needed a license from the FCC to operate a station, you had to be at least 21 years of age to get a license. NOBODY ran power. NOBODY interfered with other stations. NOBODY got on the air and used language that would make a U.S. Navy "Chief" blush. The band back then was an enjoyable means of inexpensive, low-power communications with other local CBers. The CB band was NOT a "sewer pit" back then, because people respected the rules and obeyed them.

The band BECAME a sewer pit because of people like YOU with your stinking linear amplifiers and stinking toilet mouths and your complete lack of respect for other operators, the rules, or even yourselves. I didn't "invade" your newsgroup or your band. YOU and your idiot power-hungry birdbrain good-buddy types with your Toilet Bowl Mentality invaded "OUR" perfectly enjoyable CB band of the mid-1970s and YOU knotheads turned it into the "sewer pit" that it is today. AND THIS HAPPENED 20 YEARS BEFORE I GOT A HAM LICENSE! So it has nothing to do with my being a ham...it has EVERYTHING to do with my being a RESPONSIBLE user of the CB band who is FED UP with MORONS like you who RUIN it for everybody else.

>if our "sewer" smells so bad, KEEP YOUR NOSE OUT OF IT AND GET BACK TO YOUR OWN
>SPECTRUM!!!

Your sewer? Not at all. The CB band does NOT belong to you and your overpowered, out of band, screw-everybody-else little minority of grade school dropouts. It belongs to those of us who follow the rules, operate legally, and use the band for the purposes it is intended to be used for as set forth in the appropriate FCC regulations that you and your idiot sub-Klan don't even bother to pay any attention to. So why don't you take your stinking amplifiers and noise toys and echo mics and filthy mouths and GET OFF OF OUR BAND!!!

My news reader is going to add my usual signature lines containing my ham callsign and monitor station registry to the end of this post...but be aware that I am posting here as a CB 'er who was on the CB band under the license KSO-9650 beginning in 1975. And I was posting in this newsgroup long before I got a ham license, too.

Take your amps, noise toys, and attitude and get outta town.

73 and good DX'ing,
John D. Kasupski

Hams Suck!!!!!   Ham stands for: Homely, Annoying Moron. Every ham I ever met or heard on the air is a moron. They all are nerds with thick black rimmed glasses and bald and smoke pipes and don't bathe very often. Anyone that would carry a hand held 2 meter unit and use it in public has no life and is a total dork. They all have home made antennas that suck and have them way to close to each other and have to use antenna tuners to get the swr down. They use junk equipment and don't know anything about electronics. They are all just want-a-be CBers. Good Bye

I think his point John, was that if you don't
link what you're reading, take a hike. If he is
invading on you're freq. band, then you have the
right to moan & groan about it. I personally don't
give a SHIT about you or most other Cb'ers. If I knew
you, or you had something to contribute other than
crying and whining about "Linear" "Outbandders" then
I might give a shit about you. But otherwise you
could die right know and I wouldn't loose a second
of sleep.
So quit you're whining about "Legalities" and contribute
something along the lines of " A superior antenna system would
serve you better than a linear" or " I don't approve of the use
of linears, but I can tell you how to get the most out of what
you have" Then a lot of others might not harp about you as
much.

You do sound just like a "HALL MONITOR BOY"

Does anyone have one of these radios for sale????
Keep the price reasonable or do not reply.
Thanks
John

if we wanted to look at it, we'd go to e-bay tie up N.G with that crap here . What the hell are channels thought the had to do with lakes or rivers. There tied up N.G.with more crap.

>you have" Then a lot of others might not harp about you as

>much.
>
>   You do sound just like a "HALL MONITOR BOY"
>
>   The Landshark
>

i have never found a base loaded antenna that can hear worth a heck
some can transmit half way decent but just because they radiate don't
mean they can hear

people keep saying that other people can't tell the deference when they
are transmitting on a base loaded antenna but that is not the point
they can not hear worth a heck

that is why they say a base loaded antenna is quieter because it
will not pick up the signals as well as other antennas

when you are talking to another local cb,r about 4 miles
away with no skip coming in and he is coming in at s6 to s9
and he stats that you a getting weak or fading out and that you
need to get a amp
wrong

unless he is running a 100kw or something if you hear him that
strong then he can not hear a dam thing and he is the one that
needs to fix his setup

if he is running 50 to 150 watts then if he comes in a s1 to s2
he should be able to hear you if you are running bare foot

and as for toll free,s idea of a magical network that filters out
all static and leaves the signal untouched ,,,,,that is a pile of bull s&^$$

yes toll the static is wide band but the receiver only hears the part of
the static that is in the receivers pass band and if it is in the receivers pass
band then it is at the same frequency the intended signal is at and there is
no way the antenna can tell the deference between the two

so if it attenuates the static then it attenuates the signal you want to hear
end of line

the reason most people do not care is that the skip has the meter at 10 over s9
most of the day and to be heard you have to be over that
so if the antenna attenuates the noise 20 and the signal 20 db there is really no
problem because the signal is still over the back ground noise
and the back ground noise is now at s4 to s7 instead of 10 to 20 over s9
but the signal is still 10db over the noise so no problem as for as
the antenna owner is concerned
and that should not come in to play any way if not for the dimwit amp runners
heck one dumb head in louisiana that runs on channel 6 pegs the meter
and generates noise from channel 1 to 40 that is in excess of 10 to 30 over s9
no i am not talking about any other skip but just 1 dud generates that much noise

get 10 to 40 going at once and that is why the meter is pegged on all channels
include all the kilowatt wantabees and the band is destroyed

on my old hw 101 i can set 3kc below another station that is coming in at 60 over s9
on the 10 meter band and not hear a thing but some dimwit kilowatt wantabees
that is coming in at s9 on my rad shack cb has spurs as high as s6 to s7 up to 200kcs away

and do not say my cb is junk because i have talked to someone on 23
and at the same time another person was out side in front of the house
talking in the stock mobile on 22 and i never heard one pop or crackle form
the other person
but when i changed the channel to 22 every time he keyed the mike the needle
would hit the peg so hard you could hear it ping

most of the spurs i hear on the 10 meter band is coming all the way down
from the cb band over 600kcs away

except for the occasional dimwit that tries to use a cb amp on 10 meters
and that really annoys me

i even hear some on the 6 meter band from people that has there amps tuned
to the second harmonic

some i have seen even had louder spurs than the primary radiated signal
and with all the mexiconos pounding in the band is truly junk

i dare to say that if every buddy was running legal then the noise would probably
get as high as s1 to s2 with the occasional s4 signal pounding in

which will give the locals about 10 miles range during the day and during
night the range will be about 20 miles

and yes you could run 10 kw to off set that deficiency
but that will just generate more junk instead of fixing the
problems

and toll pleas do not spew any of that magic network trash

The Government again wants your money! The Fed's are quietly attempting to pass a bill (602-P) which would allow the Federal Government to charge Internet Service Providers (ISP's) five-cents for EVERY e-mail that YOU send! Ultimately, this charge would be then passed on to you, the user, by YOUR I.S.P.   All collected revenues would then be given to the United States Postal Service to compensate THEM for the 'lost' revenue due to the usage of e-mail. The U.S. Postal Service is claiming that lost revenue due to the proliferation of e-mail is costing nearly $230,000,000 annually. Also, the USPS is seriously contemplating eliminating Saturday delivery, and INCREASING the cost of a first-class stamp to 49 cents if this bill does not pass! One Congressman, Tony Schnell, has even suggested a "Twenty to Forty dollar per month surcharge on all Internet service" above and beyond the Governments proposed e-mail charges. The Capital swithboard number is (202) 224-3121.

About 25 years ago I had a friend who started a taxi company in a major city in the southeastern U.S. The city isn't important because I am sure that the same thing that happened to him has happened to thousands of other people who got started in a business that is dependent upon a two-way radio system to survive. My friend started out with a modest radio system that served his needs quite well and he was happy with the local radio dealer that sold him the system. As time went on the city grew and so did the local taxi industry. Several new companies had started and because there are a limited number of channels allocated for taxi use it soon became necessary to implement sharing of channels by 2 or sometimes 3 companies. Nobody really liked this arrangement but the FCC had no choice in this matter and warns all business radio licensees that they have no exclusive rights to any frequency. It wasn't long before all the taxi companies on his channel began complaining about the interference they were causing each other. My friend made complaints and appeals to the FCC for years with no results. Finally a letter arrived from the FCC notifying him that he was being fined $500 because his late night dispatcher had failed to make a station ID between 2:00 and 3:00 AM. After this experience he gave up on the FCC and consulted with his two-way radio dealer about what to do to improve his system and help deal with the interference. This was the beginning of a battle between the 3 companies to dominate the channel. First there were the new higher power 110 watt mobile radios, the CTCSS tone boards and the high gain antennas. After that came the new base radio with the maximum legal limit power with a new 10 db gain antenna. The crowning glory came when the contractor came to raise the tower another 80 feet. These improvements cost him several thousands of dollars but he was determined to own the channel. The only problem was that the other companies were doing the same thing so they all ended up with the same old problem only escalated to a grand new level. They still interfered with each other in their local operating areas but they could all be heard 2 counties away. The only big winner in this war was the dealer that sold all of the equipment. I hope that most of you are beginning to see some similarity to the problem we have on CB today. Since we are not satisfied with the capabilities of an ordinary CB radio, we start trying to buy our way to happiness with power mic's, "super-gain" antennas and modifications to achieve 120% modulation. When this doesn't work we go and buy a linear amplifier. Soon an $80. CB with a modest antenna becomes a several hundred dollar mega-station that gets about the same results. Maybe it is time to re-think our ideas about how to get good results from our equipment. Thirty years ago CBer's were happy with 5 watts and a simple loaded coil antenna that looked nice and didn't bang into every low tree branch or garage door. We need to stop listening to the equipment pushers and encourage others to maintain simple, legal and efficient equipment. Good engineering practice towards adequate modulation and efficient antenna systems will do more to improve CB than all of the extra equipment in the world. We also need to urge the FCC to make needed changes in the CB regulations such as allowing FM. FM would solve a lot of interference problems. The way to do this is to let CB equipment manufacturers know what you want in your radio. They seem to have a lot of influence with the FCC when it comes to getting approval for new products such as FRS radios. When they see that several hundred thousand people are interested in new FM CB radios then the action will begin. If you think this is a good idea then send your favorite manufacturers some email today. CB improvement is up to you and this is your chance to do something meaningful for a change. Thanks for reading this post. I feel much better now that I have got this off my chest.

Good luck and 73's and 88's,

Capt. Over

>it is OUR opinion that what WE do on OUR band is OUR business and has validity
>for US and what YOU do on YOUR bands is YOUR business and has validity for YOU.

As a CB operator for 24 years (1975-1999) and counting...the CB band is just as much mine as it is yours - perhaps even more so mine since I operate legally and thus have not forfeited my privilege under Part 95 to operate on that band. If you are not operating 100% within the rules of Part 95 then you have no right to open your mouth at ALL since you have NO privileges to operate anymore, you forfeited them when you keyed up out of band or with excessive power levels, and just because FCC or nobody else hasn't gotten around to enforcing that FACT yet doesn't mean they won't eventually do just that, and remove your sorry whining sniveling butt from the band once and for all (I hope).

>WE don't have a right to tell YOU how to run YOUR lives and in turn YOU don't
>have a right to tell US how to run OUR lives either. YOUR opinion, to US, is

I'm not telling you how to run your life, pal...I don't care how you run your life. I do care how you run your ILLEGAL equipment when it interferes with my operation of my LEGAL equipment.

Outside of that, I don't care if you stay in a crack house stoned out of your mind 24 hours a day drinking Thunderbird wine out of a bottle in a paper bag and wishing your sexual organs still worked as good as they used to...as long as you keep your illegal linear amps and foul language and inconsiderate operating practices off of OUR CB BAND, I don't really give a flying frig at a rolling donut what you do with the rest of your time. The same goes for the other lowlifes in this group with the same attitude as yours.

>invalid and OUR opinion, to YOU is invalad. inother words, stalemate except you
>are on a CB news group where these things are going to be discussed. if you

If you are operating illegally, YOUR opinion is the most invalid of all, since you have no legal privilege to even be ON the air in that case. You aren't a CBer at all, you are an OUTLAW. Your opinion is invalid to me, it is invalid to the other people in this newsgroup and on the CB band who operate legally, and it is invalid to FCC.

>want to bitch about it to agreeable ears, go to one of your other ten
>ham-related ng's and bitch there.
>if you haven't noticed, nobody here is really listening to what you have to

Oh, I see plenty of other posts in this NG advocating LEGAL, CONSIDERATE operation on the CB band. There are plenty of other CB operators, some of whom are in this NG and most of whom are not, who would like to see the band cleaned up and imbeciles like YOU and others like you removed from the CB band permanently. You idiots wouldn't know anything about that because you're too busy rubbing your echo mics and amps against your crotches and telling yourselves how masculine you are because you have such "big radios" to play with.

>say. we are just wasting a lot of time fending off butt-inski's like you who
>spam this ng with a bunch of shit that no one here is interested in hearing
>except those of like mind to yourself.

First of all, you have an interesting definition of spam. What constitutes spam to you, birdbrain? Anything posted by anyone who doesn't share your complete lack of respect for FCC rules and for other users of the CB band?

Secondly, did it ever occur to you that nobody here is interested in hearing the opinions of those who RUIN the CB band for everyone else except you and your fellow barbarians?

>it's like the situation of someone throwing a party and the crasher gets
>ignored. usually, the unwelcome ones get the hint and leave but the rf police
>are like the energizer bunny. they just keep going on, and on, and on...

Yeah, well, maybe that's because the majority of us on the CB band want to get rid of you buttholes with your amps and foul mouths and lack of consideration for others, so that we can go back to actually ENJOYING the band like we used to be able to do before you morons showed up and started ruining it for everybody - but like the Energizer bunny, you mindless idiots just keep going and going and going and....

>i'd rather jump or live in a cardboard box than work for someone like this.
>not so much the "dork" part, but i really have a hard time staying around
>someone who thinks they have the authority to control personal aspects of my

Nobody gives a rat's ass about your personal life. But when you key that microphone, it isn't personal anymore. The RF Spectrum is a PUBLIC resource, and you and your fellow MORONS at bigradios.com and the rest of you with your amps and out-of-band radios and foul mouths on the air are ABUSING that public resource. And you can count on the rest of us to keep on pointing that out until the day finally comes when something is done about it. When that happens, I hope they find a nice empty zoo to cage you animals in, where you will constitute no further danger to our public resources and where the only radios you will have any access to will be listening to the squawks coming from the guards' handhelds when they walk past your cells to feed you your daily bowl of slop.

73 and good DX'ing,
John D. Kasupski

<nojunkmail_n3cvj@worldlynx.net> wrote:

>am speaking as A CBER. Why is it so hard for you to accept that there
>are other CBers, who don't like the way you lawless guys run? It's not
>just the hams. In fact the only hams that care are the ones (like me)
>who grew up on CB and still use it (When it's not overrun by morons).

Which is also the case here...but these morons justify their illegal abuses of the CB band by saying "it's okay because everybody does it". They just don't get it - everybody does NOT do it, and everybody does NOT appreciate the fact that THEy are doing it. But you know what? They do not CARE who else they are interfering with, they don't CARE who they offend with their toilet mouths on the air, they don't CARE that they are ruining the band for everybody else.

That is WHY we need to get the FCC to start enforcing Part 95 again. I say we forget about NALs and fines and confiscating equipment and just start locking these animals up behind bars where they belong.

At this point, I'm going on record as supporting the measure currently before Congress that would empower local law enforcement agencies to enforce FCC regulations with respect to illegal power and out-of-band operation. Initially I was not in favor of this legislation when I first read the text of the bill, but having listened to the rantings of people like pllo2a and Toll Free and other people in this NG representing the riffraff that is ruining the band for everyone else, I have become convinced that nothing will make these imbeciles see the error of their ways and get them to voluntarily clean up their act, because they flat out DO NOT CARE that their actions are ruining a public resource and making the band unusable for those of us out here who wish to use the CB band responsibly.

That being the case, I will contact every single member of the House committee, as well as the representatives in the house for the congressional district in which I reside and each district surrounding the one in which I reside, and ask them to support this measure. If the bill passes the House and goes to the Senate, I will also write to each member of the Senate committee and the two Senators from New York State and ask for their support of this bill.

Hopefully, the bill will pass both the House and the Senate and be signed into law by the President, at which point I will appear at the local police station and volunteer my services as a CB operator, ham operator, and concerned citizen to assist the local police in developing the technical expertise necessary to properly enforce this law. There is at least one ham on the local police force here, I do believe he might appreciate the assistance since no doubt he is the officer who, having the most knowledge on the subject, will end up being tasked with the responsibility to head up any task force being put together by his department.

I'll do the same with the county sheriff's office, and with the nearest zone headquarters of the New York State Police.

And then each time they throw the book at some buttwipe like pllo2a or Toll Free, I will take great pleasure in sitting there in the court room as a spectator and letting the offender see me struggling (though not all that hard) to conceal (though not all that well) my absolute delight at seeing yet another abuser of the CB band getting his or her just desserts.

>You try to deflect the real issue by creating an enemy (hams) to rally

>toy, go buy a Nintendo. Radio is to communicate with.

For most of us with at least half a brain and the inclination to actually utilize it now and then, yes. Unfortunately, some people never grow up, never learn the reasons WHY we have RULES, never learn that rules are a compromise, never learn the reasons WHY respecting those rules and the compromises they encompass is preferable to the alternative, never learn the effect on society that their immaturity has, never understand how their failure to respect the rules affects the rights of ALL OF US and subjects us to further regulations and limitations on our personal liberties caused by the minority who abuses those liberties.

73 and good DX'ing,
John D. Kasupski

>Bye

HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!

Still got your 6th grade diploma hanging on the wall, or do you keep
it in a drawer now to keep it from fading?

73 and good DX'ing,
